# MAD ABOUT CAD

How to turn your designs into stunning 3D images

# The new Panasonic KX-P1123. For when you need to create the best impression.

When quality matters, move up to Panasonic's 24-pin high performance dot matrix printer, the KX-P1123. With four Letter Quality fonts, document presentation is crisp, clear and black – simply stunning!

What's more, with a brisk speed of 63 cps, or up to 240 cps in draft mode, this is a professional printer with a huge appetite for work.

Outstanding value for money, the KX-P1123, with easy-to-use front panel controls, features a

generous 10K buffer and full software and interface compatibility. Paper handling, with push/pull tractors and rear, top and bottom paper paths, is exceptionally versatile.

For more information, dial 100 and ask for Freefone Panasonic or fax Julie Everard on (0344) 853707. Remember, you never get a second chance to make a first impression.

# PIPEDREAM

**WINNER**  
of the 1989/90  
BBC Acorn User  
Award for Best  
32-bit Business  
Software

The bar chart in the screen shown above was produced by using the HotLink between PipeDream 3 and HotLink Presenter.

## Major features include:

- intuitive RISC OS user interface
- many documents loaded at once
- display and printing of pictures within text
- wysiwyg display including all RISC OS fonts
- built-in 93,003 word spelling checker
- file compatibility with PC & Z88 PipeDream & BBC View Professional
- natural, background recalculation
- keystroke compatibility with Z88 & PC PipeDream
- Z88 filing system
- automatic loading of VIEW, ViewSheet, Lotus, First Word Plus, Tab and CSV files
- automatic saving of VIEW, Lotus, Tab, CSV and Acorn DTP format files
- multi-field sorting
- 62 spreadsheet and database functions
- external references between documents for 3-D modelling
- macro file recorder
- slot protection

colton  
software

PipeDream 3 breaks down the barriers between word processor, spreadsheet and database. With PipeDream 3, you can include numerical tables in your letters and reports, add paragraphs to your spreadsheets, and perform calculations within your databases.

PipeDream 3 has been written to take full advantage of RISC OS – if you can use RISC OS, you can use PipeDream 3. It is fully multi-tasking and multi-windowing, so you can work on many documents at once and instantly move information between them. PipeDream 3 can automatically load and save most popular file formats and is the first program to use the new RISC OS HotLink, which enables it to interact dynamically with Archimedes graphics programs, such as *HotLink Presenter* from Lingenuity and *GraphBox* from Minerva.

As well as winning the 1989/90 BBC Acorn User Award for Best 32-bit Business Software, PipeDream 3 was runner-up in the Best 32-bit Educational Software and Best 32-bit DTP/Word Processor categories.

## PipeDream 3

Breaking down the barriers

POWER • SPEED • FLEXIBILITY • EASE OF USE

PipeDream 3 is for all Archimedes computers with 1Mbyte or more of RAM, including the A3000.

For a free brochure, see your Archimedes dealer, or phone us on 0954 211472, or return the coupon.

PipeDream 3 costs £147.00 + VAT.

## ARCHIMEDES A3000 PRODUCTS

**Monitor stand (A3K1)** Probably the best monitor plinth available for the A3000 & the basis of a modular system.

£24.95

**System housing (A3K2)** When you are ready to expand the A3000 this system housing is added, allowing up to 2 floppy drives and a hard drive to be added.

£69.50

**Expansion card case (A3K3)** If you are adding an expansion card ('module') to an A3000, such as a hard disc card, then you will need this module case to connect & protect the card.

£14.95

**Disc buffer (A3K6)** If an extra floppy drive/s is to be connected then you will require a disc buffer. This one supports up to 3 additional drives and incorporates software control for physical to logical drive mapping & 40/80 stepping which could prove essential when using discs in 65Host or PC emulator. A key feature is the built in expansion for further cards to be added internally; also see A3K12. *NB some cheaper products may only provide connection for an additional drive without buffering.*

£48.95

**20mb hard disc (A3K7)** A 20 mb hard disc drive ready to fit in A3K2, including the hard disc card and all cabling. We are not aware of any other hard disc upgrade that is treated as an internal upgrade (consult your Acorn dealer or call PRES for details)

£429.50

**NEW 40 MB HARD DISC (A3K14)** AS A3K7 BUT TWICE THE CAPACITY.

£ tba

**3½" additional floppy drive (A3K8)** 3½" disc drive & mounting brackets for A3K2.

£75

**5¼" additional floppy drive (A3K9)** 5¼" disc drive & mounting brackets for A3K2 - ideally suited for 65Host or using the PC emulator.

£99.95

**65 Host 1770 DFS & DFS Filer (A3K12)** A ROM & disc upgrade for A3K6 provides - 1) a desktop DFS filer that allows DFS files to be dragged to ADFS viewers or straight into applications as Edit or Pipedream. 2) BBC 1770 DFS for use in 65Host. Automatic Icon and loader which can allow BBC DFS discs to have <SHIFT BREAK> operation. "...effectively turns your A3000 into a model B..." Acorn User Sept '90.

£19.95

**Memory upgrades high quality memory expansions 1MB & 4 MB, multi-layer pcb, 100% Acorn compatible, from £68**

DEALER  
ENQUIRIES  
WELCOME

*"PRES's range of add-ons offers tremendous advantages. The system can grow with your pocket, it offers security and strength but most importantly it offers choice." (AU Feb.90)*

The starting point is the monitor plinth, probably (we feel definitely) the best on the market @ only £24.95 (plus VAT) from there... System Housing, Hard Disc Upgrade, Additional 3½" Disc Drive, Additional 5¼" Disc Drive, Module Case, Dedicated A3000 Disc Buffer, 1770 DFS for BBC Emulator & DFS Filer for Desktop. plus more to come! (the last three products can be added independently of the other items)

Contact your local dealer or call PRES direct on 0276 72046 for advice on upgrading your A3000. We have built our reputation on honest dealing on quality products with thousands of satisfied customers.

### GET THE MOST FROM YOUR BUSINESS WITH AN ARCHIMEDES INTEGRATED ACCOUNTS PACKAGE

(Retail, wholesale, manufacturing distribution, school project...)

MICRO TRADER offers integrated sales, purchase & nominal ledgers with the option of integrated stock control

Facilities include invoice & statement printing with a capacity of 1000 accounts & 5000 transactions a month. The system caters for up to 6 bank accounts with full VAT facilities & journal postings.

Comprehensive reporting for individual accounts, Audit trail, Trial Balance, P&L Account and Balance Sheet.

# FREE OFFERS!

WITH YOUR MAGAZINE SUBSCRIPTION

## Free RISC User Magazine Disc

containing all the programs from RISC User January/February 1991, PLUS as usual, a selection of exciting BONUS items.

when you subscribe to

## RISC User

The most popular magazine devoted solely to the Archimedes range of computers and the A3000.

RISC User offers 10 magazines a year which typically contain:

- News on the world of Archimedes
- Reviews of the latest products
- Ready to run applications
- Utilities, routines and advanced programming techniques
- Programs and articles on sound and graphics
- Series of articles for all spheres of interest:
  - 'Into the Arc' — tutorial series for beginners
  - 'Mastering the Wimp' — series on Wimp programming
  - 'Under the Lid' — hardware series
  - 'Assembler Workshop' — all about ARM Assembler
  - 'Beginning 'C' — series on C language
  - 'DTP/WP' — tips on using commercially available packages
  - 'Arcade' — a round-up of the latest games for the Arc
- Hints and tips
- Postbag for your letters and answers to your questions
- Technical queries and expert answers

\*The programs published in each magazine, plus additional bonus items are also available on disc.

With your subscription you will receive not only 10 magazines a year, but you will benefit from a professional organisation with 9 years of experience in software, hardware, computing publications and support.

- Showroom with friendly professional staff, where you can try out the latest software and hardware
- BEEBUG's own quality software and hardware, with special discounts for magazine subscribers
- A large range of other products, and a Retail catalogue mailed free to magazine subscribers
- Speedy mail-order service
- Workshop repairs by qualified staff
- Trade-in service to upgrade your equipment

## 8 Exciting Arcade Games

for the BBC Micro and Master:

George and the Dragon,  
Ebony Castle, Pitfall Pete,  
Knights Quest, Builder Bob,  
Manic Mechanic,  
Minefield, Quad

All for  
only  
**5.95**

## Free BEEBUG Magazine

The ONLY significant magazine still dedicated entirely to users of the BBC Model B and Master series.

BEEBUG offers 10 magazines a year, all packed with:

- A variety of programs to type in, or run from disc:
  - Stand-alone applications
  - Handy utilities and useful routines
  - Entertaining games
- News from the BBC world
- Reviews of new products, and comparative surveys
- Series for all spheres of interest:
  - 'First Course' series for beginners
  - 'Workshop' for the more advanced programmer
  - '512 Forum' for users of the Master 512
  - 'Practical Assembler' for Assembly language programmers
  - 'BEEBUG Education'
- Informative articles:
  - Upgrading to an Archimedes, Writing a Compiler
  - Using the ROM Filing System, Bas128
  - Music Programming in Ample
- Hints and tips
- Postbag for your letters and answers to your questions and lots more

All magazine programs, plus some bonus items are also available on disc.

### Order Form

## COMPANY BUILT ON NEW FOUNDATION

Two well-known companies in the Acorn field – Oak and Software Solutions – have merged.

The new company, Oak Solutions, is to develop software and hardware products, starting with an educational applications series called *Foundation*.

Products will be marketed under the Oak Solutions and Worra labels. The new company will trade from Oak's base in Leeds, with research and development based in Cambridge.

Commenting on the merger, David Tee, a senior spokesman for Oak Solutions said: 'Over the past year, Software Solutions and Oak have been working closely together on the development of *Genesis II* and the *Foundation* series products. This collaboration has highlighted

the complementary skills of both companies. By pooling our resources, we believe that we are uniquely equipped to lead the way in the development of innovative Archimedes products through the nineties.'

*Foundation* is a series of curriculum resource applications based around an interactive multi-media educational database, designed for all areas of the National Curriculum.

The system is supplied with a range of editors and tools, as well as curriculum specific data which can be customised using the *Genesis II* editor.

*The Design Processor* is the first product to be released in the *Foundation* series. A range of peripherals and software will be announced later this year.

## ARCHWAY 2 RELEASE

Version 2 of *Archway*, the environment for creating Risc OS applications in Basic, has just been released by Simtron.

Completely rewritten, release 2 includes all tools and is fully windowed and multi-tasking. It is designed to allow any Archimedes owner to quickly achieve results using Basic. Powerful applications can be created without any knowledge of the complexities of WIMP and beginners can develop their knowledge of Basic while staying within the familiar windowed environment.

A simple Risc OS drag save operation creates a new application shell (a shell is a fully working program that will run and load on the icon bar).

To complete an application, the programmer creates or extends windows and menus and writes Basic code to handle the

application's tasks. Extensive graphics handling is built in to display *Edit*, *Draw*, *Euclid* (3D) and *Mogul* (film) files in windows without programming. Graphics can provide a background for the whole window and/or be put in frames within the window.

The user guide has around 50 program building sessions, with more than 30 example applications included on disc.

The complete system comes on four discs. An Archimedes or an A3000 with 1 Mb or more of Ram and Risc OS 2 is required. Two no-charge upgrade request forms are included and there is no extra licence fee for registered users. *Archway 2* costs £99.95 including VAT and p&p. Contact Simtron, 4 Clarence Drive, East Grinstead, West Sussex RH19 4RZ. Tel: (0342) 328188.

## DT FOLIO

Development delays over, ESM has just launched *Desktop Folio*, a wordprocessor, desktop and interactive publisher.

According to ESM's divisional director, Ysanne Heald, the technology being used in the package is so advanced that 'we need permission from Acorn to use it. We are excited about the product and eager to provide schools with what we know to be a superb package.'

The prototype has been well received by advisers in education. At the time of going to press, the package was set for launch at BETT 91.

Designed for the Archimedes, *Desktop Folio* costs £90. Primary and secondary licences are available. Contact ESM, Abbeygate House, East Road, Cambridge CB1 1DB.

## ARC PORTABLE SOON

Following the formation of a joint venture between Acorn and Apple (see last month's *BAU*), the race is on to launch the first portable Arm-based computer.

With the formation of Arm Ltd, the new Acorn/Apple company which will work on Arm chip development, Acorn is set to develop its marketing towards the growing portables market.

Acorn's marketing director, Mike O'Riordan, has confirmed the company's intention to launch a portable Arc later this year. Colour screen technology has been evaluated by Acorn, but a colour portable may initially be ruled out due to cost.

The further development of the Arm chip, with its high performance and low power consumption, makes the production of a portable highly likely.

However, Acorn will not be alone in pursuing this goal, since the technology developed by the new Arm company will also be licensed to other manufacturers.

The education market, where Acorn dominates, would be a key target for an Arc-type portable. Teachers and students can move computers between classrooms, or take machines home.

There are two other Arm-based portables waiting in the wings. In the final design stage is a portable designed by Mike Harrison, who is responsible for many of Watford Electronics' Archimedes peripherals.

The second is being produced by the Active Book Company, run by Hermann Hauser, one of Acorn's founders. This advanced prototype could be in production later this year.

## ART QUEST

Are you good at producing creative *Draw* files on the Archimedes? If so, 4Mation of East Sussex is interested in seeing your work.

Dave Caughley and Paul LeBeau, who programmed 4Mation's *Poster*, are working on a modular clip art application, called *smArt*. This will let users to customise drawings.

For example, a drawing of a car will have a number of different fronts, backs and wheels.

Although a couple of people are working on drawings for *smArt*, 4Mation would like to hear from any readers who would be interested in producing *Draw* files for the product.

Contact Mike Matson, 4Mation, Little Dormy, Five Ash Down, Uckfield, East Sussex TN22 3AP. Tel: 082-581 2679.

## SCSI HARD DISC DRIVES AND INTERFACES FOR THE A3000

- From Only £398
- Fast drives in a wide range of capacities
- Quality mechanisms (Seagate, Rodime, etc.)
- Metal case with power supply
- Fully screened SCSI connectors and cable
- Easily daisy-chained to provide multiple drives

Beebug have launched a full range of SCSI hard disc drives for the A3000 with capacities from 20Mbyte to 338Mbyte. These are all half-height quality drive mechanisms housed in an attractive case with an internal switch-mode power supply. Included in the price is a high quality screened SCSI cable and an 8 bit SCSI interface, which fits neatly inside the A3000 module slot. This is supplied with full fitting instructions and may be fitted in minutes. No soldering or specialist skills are necessary.

A number of drives may be daisy-chained together to give increased capacity. All drives are supplied with through connectors and the appropriate cables, but units in the middle of the chain require a set of terminating resistors to be removed. We can supply the drives with these already removed. See opposite for ordering details.

### SCSI HARD DRIVES INCLUDING A3000 INTERFACE

Stock code	Capacity	Price (ex. VAT)
5220	20Mbyte	£398.00
5221	49Mbyte	£498.00
5222	80Mbyte	£598.00
5224	110Mbyte	£798.00
5223	183Mbyte	£898.00
5225	338Mbyte	£1198.00

Carriage is £8.00 per drive. Add 10 to stock code for drives without terminators (e.g 5220 becomes 5230). Drives are available without interface - deduct £99.

## ARM3 PROCESSOR CARD

- Massive speed increase
- Riscware control software
- Comprehensive user guide
- Compact design using latest surface mount technology
- Compatible with all software

Stock code: 0134

**£399.00**  
(+ VAT + £5.50 Carriage)

The ARM3 micro-processor is the latest in the series of Acorn RISC Machine reduced instruction set processors. It is the micro-processor fitted as standard to Acorn's new flagship - the 540.

This new card from Beebug allows a super-fast ARM3 processor running at 32 MHz to be fitted to your Archimedes 300 or 400 series computer. The highly compact circuit board measures just 55 by 60 mm (approx) and contains the latest surface mounted ARM3 processor together with a clock generator circuit.

The ARM3 Card is inserted in place of the existing ARM2 processor and provides a four-fold increase in processor clock speed along with a 4Kbyte cache which serves to isolate the fast processor from the relatively slow RAM. Average speed increases of 3 to 5 times are typical, and unlike speed enhancers such as floating point co-processors, the ARM3 Card improves performance of all software. Users of the PC Emulator will especially benefit from the increased execution speed.

The ARM3 Card is supplied with disc-based software to control the cache operation, both from the Desktop and via star commands. The comprehensive user guide not only covers the control of the ARM3 card at all levels, but also contains details of differences between the ARM2 and ARM3, and a section explaining the theory of cache systems.

*Note: The Beebug ARM3 Card must be fitted by an Acorn approved component level service centre, as the existing ARM 2 chip has to be removed. This includes Beebug and many major Acorn dealers. The Beebug ARM3 is unsuitable for the A3000, as the ARM2 processor in this machine is soldered directly to the circuit board.*

**BEEBUG**

Beebug Ltd., 117 Hatfield Road, St Albans, Herts, AL1 4JS.  
Tel. 0727 40303 Fax. 0727 860263

Please add VAT at 15%. This advert was produced entirely with *ovation* DTP

## THE EXPANDING A3000

A new expansion box from Wild Vision now allows Archimedes expansion cards to be used with the BBC A3000.

The A3000 expansion box fits into the rear expansion port of the computer and holds two full-width or three half-width cards. This will enable all Arc podules designed to Acorn standards to operate with the A3000.

The backplane of the unit has multi-layer construction to ensure minimum signal timing changes – important for high performance cards such as Wild Vision's Hawk V9 colour

digitiser which uses the MEMC interface at its maximum speed.

The expansion box is provided with an external 12 volt power supply and is protected by a power protection relay.

Priced at £139 plus VAT, Wild Vision is also offering the box with the Hawk V9 digitiser for an introductory price of £399 plus VAT, saving £79 on usual list prices.

Contact Wild Vision Ltd, 15 Witney Way, Boldon Business Park, Boldon Colliery, Tyne & Wear NE35 9PE. Tel: 091-519 1455.

Wild Vision's expansion box holds two full-width podules

## NEVER A CROSSWORD

Panda Discs has launched three £9.95 additions to its range of software for the Beeb and Master 128.

● *Touch and Learn* is a content free Concept Keyboard package that will suit both primary and special needs applications. Questions can be answered by touching overlays on the board, and a score is given at the end of each run.

● *Windows* is used with *Wordwise Plus* and enables green embedded commands to be obtained through pull-down menus. Complex operations, such as paging, are taken care of by Draft Print and Final Print options. Commands include centering, underlining, bold, indents, and so on.

● *Catalogue* is an information storage system for *Wordwise Plus*. Ideal for storing and searching record collections, sets of slides, names and addresses, the software is fully auto-booted and menu driven.

Panda has also improved its *Xword* package. Just send in your original disc with return postage for a free upgrade.

Contact Panda Discs, Four Seasons, Tinkers Lane, Brewood, Stafford ST19 9DE.

## ENHANCED BEEB EMULATOR

An enhanced BBC Model B emulator has been released by Acorn. The new version provides better emulation than the version of !65Host on the Archimedes applications discs.

Aimed primarily at education, the new emulator should help schools and colleges to migrate to the A3000/Archimedes computers.

The software comprises an improved version of !65Host, which emulates the Model B on an Arc, and includes utilities to help transfer and modify

and port 6502-based programs into Risc OS.

A comprehensive manual supplied with the emulator covers all aspects of emulation and continuity, including legal issues. This is available as an A5 bound copy, as A4 loose sheets (to facilitate photocopying) and electronically on disc.

The disc will be generally available at the discounted price of £19.55. Write to Acorn Direct, 13 Dennington Road, Wellingborough, Northants NN8 3RL.

## PROJECTORS FOR SCHOOLS

Video projection looks set to benefit IT teaching in Northamptonshire schools.

Two Epson video projectors valued at over £3000 each have been purchased by the Northamptonshire Computer Education Centre (NCEC).

The video projectors are compatible with Acorn computers and will find extensive use in the NCEC's computer room, which has a display area for up to 50 people. The NCEC also expects regular requests from teachers to borrow the projectors for graphics presentations to groups of schoolchildren.

The NCEC serves 350

VP-100PS video projector

schools (100,000 children) in the county.

The Epson VP-100PS has an RRP of £3250 and is available from dealers. Contact NCEC, Covington Street, Northampton NN1 5JU.

## C64 TO BEEB

If you currently own a Commodore 64 and a BBC micro, but want them to interact, then the Commate Rom is for you.

It allows you to use Commodore peripherals with the Beeb, and makes it possible for C64 users to shift to the Beeb without losing the use of their original equipment.

Commate offers the Commodore Disc Filing System (CDFFS) which allows BBC programs to address Commodore disc drives. The exchange of files between the BBC and C64 machines is possible and a special option is provided to translate the BBC character set to the idiosyncratic Commodore set.

There's a dedicated printer driver built in, which makes a Commodore printer act just like a normal Centronics parallel printer.

A comprehensive manual and reference guide describes the CDFFS system and Commate Rom is supplied with the BufferBox interface that connects the user port and accepts the serial bus cable.

The Commate Rom costs £49.95 plus VAT and is available from Lighthouse Software, PO Box 3822, 7500 DV Enschede, Holland.

## ACORN TO PC

If you want to link up your Acorn machine to a PC, but you are not sure about relevant connections and compatibility, a new book on the subject might be what you need.

Called *Acorn to PC*, this handy reference guide is designed to advise users of BBC B, Master, BBC A3000 and Archimedes machines on how to bridge over to the MS-DOS world.

Written by Dr John Lockley, co-author of the *Complete BBC Computer User Handbook*, the book shows how and where the two systems (Acorn and MS DOS) differ. *Acorn to PC* runs to 250 pages and costs £15.95 from Watford Electronics, Jessa House, 250 Lower High Street, Watford WD1 2AN. Tel: (0923) 37774.

## NEW MUSIC FOR SPECIAL NEEDS

Two new music education software packages have been developed for children with special needs.

*Soundshow* provides over an hour of pre-recorded music for listening exercises and is aimed at users whose disabilities prevent access to a non-computerised music source, such as a record collection.

The second package, *Sound-score*, helps all children compose music using a 'graphic score' - a direct visual representation that shows the pitch and length of notes without the complexities of the musical staff.

It also provides strong links with art and maths. The final score can be saved to disc and printed in a variety of sizes.

*Soundshow* and *Sound-score* are part of Hybrid's *Sound Worlds* family and operate with the Music 5000 synthesiser on the BBC model B or Master. Each costs £29 plus VAT.

● Hybrid Technology has expanded its music system and now offers 10 system packages, ranging in price from £99 to £729.

Details are available from: Hybrid Technology Ltd, 273 The Science Park, Cambridge CB4 4WE. Tel: 0223 420360.

## SCSI NETWORKS

SCSI interface manufacturer Lingenuity has teamed up with Software Solutions to produce a new networking solution for the Archimedes and BBC A3000 machines.

Called *SCSI Share*, the system uses high speed SCSI protocols to allow a number of computers to access a single hard drive simultaneously via the Lingenuity SCSI interface.

*SCSI Share* is suitable for use in education, where groups of floppy disc or Econet-based Archimedes/ A3000 machines are in use.

Evaluation sites are being set up and application forms to become an evaluation site are available from: Lingenuity, Wood Farm, Linstead Magna, Haleworth, Suffolk IP19 0DU. Tel: 098 685 477.

## EDUCATIONAL DISCOUNTS

Beebug is a major supplier of Acorn equipment to the education market. We are always pleased to quote for the supply of computer equipment. Please call 0727 40303 for further details.

## TEST FLIGHT

Why not visit our showroom and experience the Acorn Test Flight. You could win a trip on Concorde, a flying lesson weekend or a Helicopter lesson.

Beebug is an Acorn Premier Dealer and have been involved with Acorn products for over 8 years. We pride ourselves on our after sales service.

Phone (0727) 40303 for a free catalogue.

## BEEBUG SHOWROOM

Our large modern showroom in St Albans has a wide range of Acorn related products on demonstration. Friendly, helpful staff will be pleased to discuss your requirements with you.

### Opening Hours:

Monday-Saturday 9.00am - 5.30pm  
Late night Thursday to 8.00pm

## ORDERING INFORMATION

All prices exclude VAT. We accept Access Visa, Connect cards and cheques drawn on UK Banks. Orders from education and PLC's are most welcome. 80% of all orders are dispatched within 24 hours, but allow up to 28 days for goods which are out of stock. An acknowledgement of order is sent by return if goods are out of stock. All sales subject to our standard terms & conditions.

# Genesis II

## The Power of Creation

**T**he new release of Oak Solutions' market leading multi-media package, Genesis, offers extensive new functionality combined with an impressive range of professional features. The extended script language allows you to easily create your own Risc OS multi-tasking applications with icons, menus, dialogue boxes etc. without the need to get involved in low level WIMP programming.

**A**dvanced data compression techniques ensure that Genesis II applications are typically only  $\frac{1}{3}$  the size of Genesis I applications. Sampled sounds from Armadeus can be played directly from disc to reduce memory requirements. Smaller, faster database applications can be created using comma separated value (CSV) files. These factors, together with improved single disc use, reduce the number of disc swaps required when creating new applications.

**M**ultiple text styles and colours are now available within a single frame. Information may be left, right or fully justified, or centred. The new 'Button' filetype greatly speeds the creation of new pages of information.

**G**enesis II is an ideal development tool for creating multimedia applications using CD ROM drives and Video Disc player technologies. With its enhanced interfacing capabilities, Genesis II can now be controlled by the Concept Keyboard to broaden its uses in the important fields of Primary and Special Needs.

**F**or all multimedia applications on the Archimedes, Genesis II offers a fully functioned, versatile and easy to use system with unrivalled features for only £130.00

All Genesis I applications may be used without modification.

Genesis II will be available at the BETT '91' exhibition at the Barbican Centre - January 16-19 1991.

To qualify for upgrades, please return your original Genesis 'Editor' disc to Oak Solutions at the address below from 20th January 1991.

Upgrade price: £52.00 RRP ex VAT

Genesis II £130.00 RRP ex VAT

## The Future Arrives

OAK  
SOLUTIONS

# MASTERING KEYS

ScanMaster is a new hardware/software system for severely physically disabled computer users, particularly those unable to work with a keyboard. It is based on the Master 128, modified by adding a proprietary video board. This, in turn, drives an ordinary colour monitor.

The user interacts via a single switch, controlling a scanning grid on an extra monitor which shows keywords or commands for any program.

Developer Roberts Wills (author of the original *Folio* wordprocessor) sees two distinct markets for ScanMaster: special education schools and adults with severe physical handicaps.

The system comes with a bundle of modified software, including a wordprocessor (an extension of *Folio*), a bundle of games and flexible facilities for keyboard emulation. It can also run a large number of popular educational packages such as *Podd* and *Granny's Garden*.

Robert is currently working on *Image* – he wants to create a catalogue which lists the educational packages that work with the system and the special discs which are available.

A pre-release version of ScanMaster was demonstrated at last year's Naidex exhibition. The software is now essentially complete, although minor changes are being made in response to comments made by trial users.

With a view to providing customised scanning grids to drive important programs, Robert is currently collecting information on a wide range of packages from major educational software suppliers.

He is also looking at the possibility of releasing the scanning grid development tools to developers and technically-minded users who want to modify their own software.

Once ScanMaster is in people's homes, Robert will be running a back-up service to

Last November's Resource conference was attended by more than a thousand delegates. They came from all over the country, although mostly from the Resource area. The theme was 'IT across the curriculum - a celebration' and schools minister Michael Fallon picked up on this, asserting that over the years much had been achieved in the field of educational IT and there really was cause for celebration. He also gave a sneak preview of the results of the most recent DES survey into computers in schools. According to the department's figures, there is currently an average of 4.3 micros in primary schools, up from 2.5 in 1988. In secondary schools the number is 41, as compared to 23 in 1988. Mr Fallon's comment was that this represented 'considerable progress'. The results of the March 1990 survey should be published later this year.

help users with any technical problems they may encounter.

Hugh Steeper Ltd is manufacturing and distributing the ScanMaster system. For further information contact the company at 237-239 Roehampton Lane, London SW15 4LB.

## Two for Joy

Longman Logotron has released *Magpie* and *Revelation*, two impressive new educational packages for the Archimedes/A3000.

*Magpie* is a multi-purpose program designed for project work in primary and secondary schools, although it could equally be used for business presentations. It's an authoring system which allows children to build pictures, text and sound-bites into 'binders'. They can construct buttons to link the different screens in any way.

It can be used with sound-sampling boards, such as

Armadillo and Armadeus, and can also be converted into a simple but nonetheless effective DTP system (it supports the Acorn Outline Font Manager).

*Revelation* was developed at Homerton College in Cambridge where *Image*, revolutionary in its time, was written.

Essentially, it has all the facilities of an advanced paint package but it's particularly interesting because it can handle the input of pictures from other sources and process them to produce completely new and different images. The other sources may be digitisers, scanners or video frame grabbers.

Until the end of March both packages are on special offer – *Magpie* costs £39 and *Revelation* is £54 – so get your orders in quickly. Longman Logotron is at Dales Brewery, Gwydir Street, Cambridge CB1 2LJ.

Lisa Hughes

## NEWS IN BRIEF

● Beekside Farm is a *Touch Explorer Plus* resource pack, from the Cumbria Information Technology Across the Curriculum project. It's a collection of overlays and files about a Lake District hill farm, for a BBC micro and a Concept Keyboard.

This is Cumbria LEA's first venture into resource publishing and it has proved popular with local schools.

Anyone else can obtain the pack for the very reasonable price of £5.50. The address to write to is CITAC, Resources Section, Education Department, 5 Portland Square, Carlisle CA1 1PU.

● *Graphite*, from Keep IT Easy, is a graphics and sprite generator for the BBC B and Master 128. Although it's aimed at all ages, abilities and subject areas, it will be particularly useful in science, technology and geography lessons.

Also for the Beeb and Master from Keep IT Easy is *Mattim*, a timing and counting program which allows pupils to experiment with data capture.

Different sprite sets are available for *Graphite*, ranging in price from £6.50 to £13.50. *Mattim* is only £5.50. Keep IT Easy (or KITE) is at PO Box 29, Nuneaton, Warwickshire CV11 4TT.

● The long-awaited *Desktop Folio* for the Archimedes is ready for release. According to publisher ESM, there are two reasons for the delay: the technology it employs is so advanced, Acorn had to give permission for its use and programmers needed time to incorporate the extra features requested by teachers.

*Desktop Folio* is a word-processor/DTP package. A single copy costs £90. Primary and secondary site licence are £250 and £375 respectively. ESM is at Abbeygate House, East Road, Cambridge CB1 1DB.

## HOTLINK PRESENTER

**TALKS TO PIPEDREAM 3**

For the first time, two Acorn applications can communicate with each other in real-time in the RISC OS environment.

HotLink Presenter includes all the features of Presenter II (the professional graphics programme which enables you to present your data graphics in bar, pie or line format) with the additional benefit that it can be updated automatically from Pipedream 3.

Updates are available for existing Presenter II and Presenter users, as well as site-licences for multi-station installations.

## PRESENTER STORY

You've heard about Presenter Story - well now its available!

Presenter Story is a revolutionary software package that enables you to create your own presentation on a work-station and project it into any of the following:

- \_\_\_\_\_ Large screens
- \_\_\_\_\_ PAL/Composite Video Monitors
- \_\_\_\_\_ Analogue/RGB Monitors
- \_\_\_\_\_ Video Walls
- \_\_\_\_\_ Overhead projector displays

Use your Archimedes or A3000 for that important presentation. You can change your presentation at a stroke in a few seconds - no more last minute panics getting new slides or acetates made. Presenter story is ideal for sales presentations, corporate presentations, training programmes, internal departmental presentations, or home or studio video application.

# FIDO AT THE ARCADE

The World of Cryton and Arcade Bulletin boards have now become members of the extensive FIDO network. No, it's not a furry four-legged beast, but a complex interface between hundreds of bulletin boards around the country. FidoNet began life early in 1984, when communications was in its early days and the domain of the true hobbyists and enthusiasts. It started in San Francisco, more or less: 'just for the fun of it; to see if it could be done'.

Now it is a complex system allowing your message to travel around the country, reaching a much wider audience than a single bulletin board. The basic purpose of FidoNet is very simple; It's a hobby, a non-commercial network of computer hobbyists who want to play with, and find uses for, packet switch networking (PSN). Not being a commercial venture, FidoNet is totally supported by its users and sysops, and in many ways is similar to ham radio, in that other than a few 'stiff' rules, each sysop runs their system in any way they please, for any reason they want.

The rules are actually fairly straightforward and obvious; to let other sysops know if your system is going to be down for any lengthy time, or if you change your phone number – imagine some poor person being woken up every night by the phone ringing every two minutes at 4.00am! Next time you log onto the World of Cryton (0749-679794, scrolling, 8N1) or Arcade (081-654-2212, scrolling, 8N1) do take a look around, and if you do leave a message, you could find it being echoed to bulletin boards across the country within 24 hours.

## It's faster with Fred

Micronet, the UK's biggest viewdata network, run by Prestel, has developed a new version of its CET standard for downloading files from viewdata systems.

## ArcTerm 7: fully comprehensive

CET has long been notorious for giving slow download times, especially when using ARCTed files. As Prestel uses only seven-bit data, any files transferred must first be converted from eight-bit format into seven-bit before they can be CET encoded. The encoding process can actually add 160 to 170 per cent to the original length of the file (yes – 2.5 times longer!).

Now a new FCET format is in operation, which ensures that a file can never exceed 25 per cent of its original length – leading to much decreased download times, and hence cheaper phone bills. Micronet is hoping that FCET will become a new standard protocol for all viewdata systems, and is encouraging software producers to include FCET converters in future communications packages.

If you require more information, I can supply more detailed documents explaining the technical specifications on receipt of a blank formatted disc (Beeb or Archie). Next time you log on to Micronet and download a lengthy file, you'll immediately notice the difference.

## ArcTerm 7

By the time you read this, The Serial Port's long awaited

sequel to the popular *ArcTerm 6.01* package should be readily available from your local dealer. ArcTerm7 is a fully comprehensive communications package for all Archimedes machines.

Running within the Risc OS desktop environment, it has all its advantages; downloading a file simply by dragging it to the relevant directory, being able to use your machine while downloading lengthy files, full support for xmodem to zmodem, including CET and Kermit.

A full script language is also provided, with which to customise any of the many powerful features. Host mode will even allow you to set up your own simple bulletin board, catering for message gathering and mail between multiple users.

ArcTerm 7 is available from The Serial Port at £79.95. Users of existing packages such as *Hearsay* and *ArcComm* who upgrade can import their existing telephone directories and viewdata framestores, if they decide to upgrade.

The long-awaited multi-tasking version of *Hearsay*, from Beebug, should also be under way by the time to read this, so as they say 'Watch this space for details'.

Paul Vigay

## NEWS IN BRIEF

● Panda Discs now has 16 volumes crammed full with Music 5000 files, which are available for modem owners to download via the DCT DATABASE. Get in contact by phoning 0384-239944 (viewdata) or 0384-238073 (viewdata/scrolling).

A pamphlet detailing titles can also be obtained by sending an sae to: Panda Discs, Four Seasons, Tinkers Lane, Brewood, Stafford ST19 9DE.

● For all of you who like to log-on when you're on the move or away from home, NEC has released a range of modems that are designed for specific use with car phones.

Called the ProLink CDLC (cellular data link control), prices start at £495 for an MNP model capable of communicating at v21, v22, v24 and v22bis.

● 2400 baud and faster now seems to be the growing standard for modems – and the prices of the devices are rapidly dropping.

Racal has launched a new range of low-priced Maxam modems to give you the increased benefits of v22bis, v32, v32bis and v42bis. Prices start from only £399.

● Plug time – if you are the sysop of a bulletin board that supports the BBC and Archimedes, then please let me have details.

You never know, it could be your board that is featured here in future months.

*Do you run a bulletin board? Or do you have an axe to grind with someone who does? Or maybe you want to praise them...*

*In any case, all communications about communications are welcomed. Contact:*

# PUBLIC KNOWLEDGE

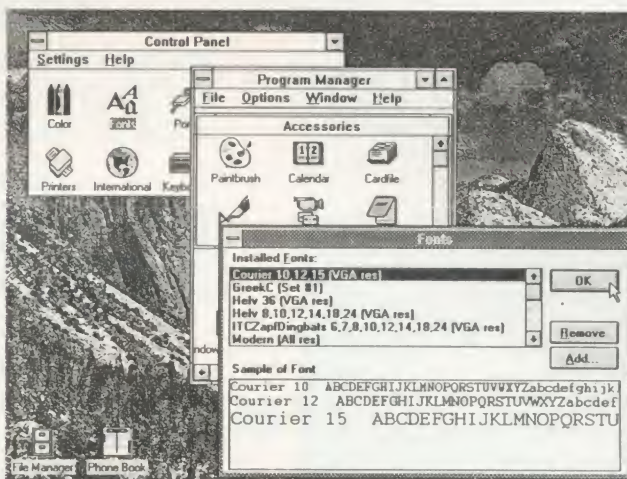

Running MS DOS or DR DOS on either the Archimedes or the Master can be quite a shock, more so on the Desktop-based Arc. Both DOSs are command line based, more akin to the star commands system of the BBC micro. There are, though, a few useful and low-cost extras.

One of the most useful is a tiny program called *Dosedit*. This lets you edit the command line, or any of 12 previous command lines, which can be flicked through with the up and down cursor keys. The left and right cursors are used to move along the currently displayed command line and you can over-type or insert characters to modify its contents. Pressing Return executes the new command.

Another goody is *List*. This is a file viewer for Ascii files which not only scrolls and pages back and forward through them, but can also search for words or phrases within the file. *List* can also filter out the high bits of characters in text files created with wordprocessors such as *WordStar*. The latest version, *List Plus*, provides basic file management functions, printing of files, multiple viewing windows and a file selector from within the program.

A third useful utility is an Ascii scanner, such as *Scan*. This will look through any file and extra the printable Ascii characters from it. If you need to examine a command or executable file (.COM or .EXE) to check prompts, error messages or version details, this is the easiest way. To look at the machine code itself, of course, you'll need a hex editor.

One easy-to-use utility for hex byte editing is *Fred*. This program uses both hex and Ascii displays, can search through a file for specified bytes or characters, and even includes a simple game for those moments when nothing seems to come right. It's available for £15 from its author Steve Godwin, at

Windows 3 – could Arc users experience it?

Alexander House, 50 Cavendish Road, Sutton, Surrey SM2 5LN.

The other programs mentioned here are all in the public domain or are sold as shareware. One source, though there are probably many others, is Shareware Marketing, Beer EX12 3HW Phone them on (0297) 24088 for details or a catalogue.

## Windows 3

There's currently a lot of talk in the PC world about Windows 3. This is a graphical user interface, similar in some respects to Risc OS, but lacking some of the finesse of Acorn's GUI. What excites PC users is the consistency of the programs that run under Windows 3, and that it 'gets around' some of the software limitations of MS DOS.

The main restriction on PCs is of course the 640K main memory limit. Using Windows 3 on a 386 or 386SX-based PC you can directly address up to 16Mb and use areas of a hard disk as 'virtual' memory (the computer sees the disk as part of its memory map).

But what advantage is all this to the Archimedes owner, running the PC emulator (Windows 3 will never be available to Master 512 owners, as it needs at least 640K to run)? At the

moment, using versions 1.33 or 1.34 of the emulator, not a lot, but we may still see a PC emulator out of Acorn with improved resolution – perhaps EGA – and a little more wellie.

In the meanwhile, Windows 3 can be made to run with a CGA screen and is also capable of running on a 'basic' 640K PC. It does work entirely in the PC's graphic modes, though, and will end up running incredibly slowly on a standard Arc.

But with an Arm 3 in your Archimedes you're looking at basic PC AT speeds, and this is enough to get Windows 3 running adequately. You will also need a hard drive on your machine, as the Windows 3 code is large and uses overlays.

If you can meet these requirements, you have access to a lot of newly-written or revised PC programs. More and more software is being written for this standard and many see it as the way forward for PC software. It begins to give the PC the consistent interface it has so long needed. Rather than writing for a machine with any number of different configurations, software authors write for Windows and let the interface handle the hardware aberrations.

Simon Williams

## NEWS IN BRIEF

● Did you know that in almost all cases you can leave out the \*.\* abbreviation, meaning 'all files here' in file operations? For example, the commands `DEL \WP\ LETTERS\*` and `DEL \WP\LETTERS` will both empty the LETTERS sub-directory of the WP sub-directory, and the second version is a lot easier to type.

● If you're looking for a near-laser quality printer for both PC and Archimedes/Master use, you would do well to consider the Hewlett Packard DeskJet 500. This is a revamp of the company's best-selling ink-jet printer, with extra internal fonts, waterproof ink (for the legal profession, in case you wonder) and a reduced price tag. The asking price is now £599 plus VAT, which should mean a street price of around £400.

● You can translate all kinds of graphic file to Archimedes sprite format using John Kortink's *Translator* utility, from most Archimedes Public Domain libraries.

The three formats of particular interest to PC users are IMG, produced by *GEM-Paint*, TIF, used by a lot of different graphics programs, and PCX, the ubiquitous format originated by *PC Paintbrush*.

Translating the other way is not nearly as easy, though. Does anyone know of a PC program which will read Archimedes graphic files?

● Try adding the following two lines to your CONFIG.SYS file, if they're not there already, or increase the values to the figures shown here:

```
FILES=20 BUFFERS=20
```

The extra space made available for disk I/O will mean slightly fewer accesses and slightly improved program throughput. These parameters are also essential for some applications to run.

## !INSPIRATION

The most comprehensive music sequencing package available for the Archimedes.

Come and visit our demonstration area, or phone for a demo disc. Fully Risc OS compatible. Purchase with Archimedes (special price), or simply add it to your existing system. All you need is a MIDI interface.

!Inspiration offers a control panel featuring: Replace and Overdub record modes • Cue Start and End • System Status Display • Multiple Save capabilities, and many other features.

SCSI hard disc + 16 bit controller for the A3000

from only **£349.00!**

+ £10 p&p + VAT

Due to the overwhelming popularity of our 20Mb Worra Winnie introduced last month, we have decided to extend the range to cover the 45Mb and 80Mb sizes.

Our bulk purchasing policy allows us to bring you these drives at staggeringly low prices, and yet, all drives are top quality units, manufactured and tested under a zero defect quality control regime to ensure the highest levels of quality and reliability.

20Mb £349

45Mb £449

80Mb £649

Add £10 to cover p&p.  
Prices exclude VAT

- ☐ Includes Oak Solutions 16 bit SCSI controller
- ☐ Complete and ready to use
- ☐ Manufactured by Oak Solutions under zero defect quality control
- ☐ 40mS access time
- ☐ Auto-parking heads
- ☐ 16 bit data transfer rates
- ☐ Leaves internal expansion bus free for the cards you're most likely to need (user port etc.)
- ☐ Any of the Oak Solutions range of SCSI devices can be added later as required
- ☐ Metal case colour matched to A3000
- ☐ 12 month replacement guarantee
- ☐ 12V DC brushless low noise fan
- ☐ Switch mode power supply

### NICE ARC, NO ELITE

I have just purchased a brand new BBC A3000 and I consider it the best investment made for my home yet. Anyhow, I have a couple of questions. First of all, where is that brilliant space adventure *Elite*?

Written on the model B and upgraded for the Master 128 I would have thought it to have been one of the first games for the Arc. Can absolutely nothing be done?

If I had the money I would gladly pay whatever fees necessary to get this game off the ground as I am sure it would sell like hot cakes.

Another question. This may be just ignorance on my part but I cannot find details anywhere of the VIDC enhancer. I know that combined with a multi-frequency monitor it can do wonders for your screen display, but can it do anything for an ordinary monitor?

I have been enticed by the claims of this VIDC enhancer and would love to buy one, but I am not rich enough to splash out on a multi-frequency monitor. So will it be of any use to me?

Hugh O Byrne  
County Kildare

*Elite* is not yet commercially available for the Archimedes. There are, however, rumours of a possible Arc version running under a modified 6502 emulator to be released by Arxe Systems. This can't be done until permission is given by Acorn and/or Firebird who own the rights to the game.

As for a true Arc version and not just an emulation, well, the game itself took some time to develop on a 32K machine. Having 1Mb of memory available dramatically increases the scope of such an epic, and thus increases the amount of time to research, program and test it. Of course there are several projects in the pipeline that will use the full potential of

the Arc, such as the almost legendary *Karma*, but still none have surfaced.

As the name implies, multi-frequency monitors are capable of varying their refresh rates, and they allow greater horizontal resolution than a standard monitor. The Atomwide VIDC enhancer, which includes a new video crystal on a small circuit board and the software to drive it, takes full advantage of this ability, allowing the Archimedes to display screen modes of up to 1148x448 pixels. But unless you have a multi-frequency monitor, it is useless.

### PRaise WORTHY

I am writing to tell you about the excellent service I got from Norwich Computer Services.

A short while ago I bought a hard disc from them for the school in which I work. I had also obtained some software which allowed me to partition my hard disc for use with my PC Emulator. I anticipated no problems, but...

To cut a long story short, without prior notice I visited NCS with the whole lot, including my A3000, in order to get things sorted out. A member of staff was about to leave, but he sat down and cheerfully corrected and completed the whole process. And this was *after* he had finished for the day.

This high-quality service should not go unmentioned and I hope therefore you will be able to print this letter.

Richard J Gates  
Norwich

Praise where it's due is what we say. You may also be interested to know that Norwich Computer Services has now raised over £30,000 from its 'Careware' discs. The profit from such discs goes to different charities around the country. We too would like to say congratulations for a job well done. Keep it up, Norwich.

### CLUBBING TOGETHER

Your readers may be interested to know of the Club A3000. This club, officially launched at the Acorn User show, is now growing rapidly. It aims to provide Arc and A3000 users with contacts near them, and the ability to act as an agent for their area.

We are also beginning to hold open evenings around the London area although as more people join we hope to go further afield. Can I take this opportunity to ask anybody who owns an Arc and is interested in the club to write to the address below.

Club A3000  
48 Michleham Down  
Woodside Park  
London  
N12 7JN

### FIRST STEPS

As someone who had decided to buy a BBC A3000 for Christmas, can I say how delighted I was to read your new series 'First Steps on the A3000' in last month's issue.

I have spent a great deal of time looking into my choice of new computer, having been a loyal Beeb owner for years.

Your new series not only confirmed to me that the A3000 is exactly the right machine for me, but it has also helped me to convince the rest of my family that I wasn't wasting money on an expensive 'toy'. They all now seem as keen as I am to take those first steps!

Although I enjoy the technical side of computing, I have been attracted to the A3000 for its ease of use. Risc OS is superb, and I am looking forward to following the rest of the series and learning more. Keep up the good work!

John Dale  
Birmingham

You can read the second part of our beginner's series on page 72. Like the first installment, it's been produced on the Arc itself - as has this page too.

### SEND IN YOUR LETTERS

If you have a query, a question, an opinion or a gripe, then write in and tell us about it. We want to hear your views on anything in the Acorn world, be it *Electron*, *Beeb*, *Master* or *Arc*. Write to 'Letters' - the address is at the top of the page.

subject to stock levels.

# QUESTIONS AND ANSWERS

**Q** I use ADFS on my BBC Master 128 Computer and, sadly, I have experienced problems with the dreadful E attribute. I have a copy of David Spencer's utility, which you published in the magazine, but I cannot understand how it works.

Paul Brooks

**A** To use the 'E' problem solver program you must know the sector address of the directory containing the E files. The directory address can be found by using the \*EX or \*INFO command.

Go to the parent directory above the one in question and type \*EX or \*INFO followed by the directory name. The hex address on the right-hand side of the screen is the sector address of the directory.

You then run the program and answer with the sector address. The program will set every file in the directory to WR - read and write.

**Q** I am very pleased with the Cobol compiler you published in the March 1990 issue of *BBC Acorn User*. I think that I am going to find it a very useful program in my industrial placement work.

However I have had trouble with the creation of source files for using with the program with *InterWord* and *View*. Can you offer some guidance?

Andrew Burgess  
North Shields

**A** Source files for use with the Cobol compiler can be created on wordprocessors like *Wordwise Plus* which will produce pure Ascii text. You will have problems with *InterWord* as this produces header code before the text.

*View* can be made to produce pure Ascii text, but you will need to purchase the Ascii file spooler from Dabs Press which enables the word-processor to spool out Ascii text from *View*.

**Q** I have a BBC micro and have recently purchased a second-hand Olivetti PR15 printer. It works very well with *Mini Office* but I am experiencing some difficulty in printing text produced with the *Folio* word-processor package designed by Tediman Software and published by ESM of Cambridge. I also cannot get the *Stylus* children's wordprocessor to print properly.

B Ewan  
Harwood

**A** The *Folio* program uses an Epson FX-80 compatible printer graphics mode to obtain its high-quality print-out. The fonts and styles it prints are not contained within the printer like those you are printing with *Mini Office*.

This I presume to be the same with the *Stylus* children's wordprocessor available from MAPE although a smaller number of styles are available. It would appear that your Olivetti PR15 is not compatible with the graphics mode that the programs are expecting and therefore the high quality printing is not available.

Your main hope would be to write to Tediman Software, PO Box 23 Southampton, Hants, SO9 7BD to see if they have produced a 'patch' for your printer for another user.

Its successful use with *Mini Office* would indicate it does have some Epson compatibility but only probably with the earlier Epson MX series.

If you are going to use *Folio* successfully with your BBC micro, you will find the Taxan/Kaga, Canon, Panasonic KX-P11081 and Citizen 120D very suitable.

New nine-pin printers of these makes can be purchased for £120 upwards.

**Q** I've been really lucky in acquiring an Acorn 32016 Cambridge co-processor for use with my BBC model B micro. I wonder if you could point me in the direction of suppliers of software for this device?

Gary Hughes  
Parkville  
Australia

**A** Unfortunately no software was ever released for use with this 32-bit co-processor. It was supplied by Acorn with the PANOS operating system and bundled with some high-level languages.

It did prove popular in some UK academic institutions. I believe Queen Mary's College at London University had a network of the co-processors at one time.

Acorn quickly abandoned the system when they adopted the Arm concept for developing their 32-bit platform, the Archimedes.

**Q** I'm experiencing problems with the use of Watford Electronic's *Quest Paint* and *ConQuest* products. The former works all right if *ConQuest* has

If you have a problem with an Acorn micro, commercial software or a program you are trying to write then *BBC Acorn User* can help. The Post A Problem service guarantees to give you a personal answer within 10 working days for just £4.

Write out your problem with as much detail as possible and, if a program is involved, include a disc or cassette. Fill in the coupon at the bottom of this page and send it and your problem along with a cheque or postal order for £4 (including VAT) made out to Redwood Publishing. If you want recorded delivery add on the cost of this.

Please note that debugging readers' own programs or those from other magazines is a complex task and we cannot guarantee to give a full solution. Unless the problem can be spotted quickly, the Post A Problem service will only be able to make general comments. The service will answer the problem and return all material received within 10 working days of receipt. If we fail to match this promise then your cheque or postal order will be returned - you can't lose!

not been installed. I have a BBC B which has an Aries Shadow Ram (B32) and sideways Rom board (B12) installed. I use the Acorn DFS and the Watford DFS v1.42.

James Hulin  
Bristol

**A** *ConQuest* makes use of banks of sideways Ram to enable it to operate fully.

The compatibility section of the *ConQuest* manual indicates that on the BBC B Plus 128 and the Master 128 this is 'simply achieved by selecting the appropriate bank with the Rom select register at &FE30'.

The Aries B32 board is modelled on the way the memory is managed in the BBC B Plus, but that is for the version without the sideways Ram extension boards that Acorn released later. This is the start of your problem.

The Aries B20 provides 20K of Shadow Ram and 12K of sideways Ram. In addition, the controlling software for the Aries board enables you to configure the 32K of Ram in the B32 so that you can have a full 16K of Sideways Ram. The problem is to get *ConQuest* to recognise this sideways Ram.

Watford supplies a user definable sideways Ram driver for incompatible sideways Ram systems. Watford Electronics, as the sole supplier of Aries products, should be able to help you.

**Q** I've purchased a second hand EMR MIDI 4 interface podule for an Archimedes, which I want to program for specialist applications with my own Basic and assembler code. But as there was no software and no manual I don't know where to start.

Mr T Willis  
Wrexham

**A** The MIDI Interface you have normally installs a module when supplied by EMR. You will therefore need the driver module for EMR MIDI hardware, the WFS (Wave Filing System). This is definitely supplied with the EMR sound sampler package

which includes the MIDI podule you have.

It will be considerably easier to use the EMR MIDI podule if you can obtain the module. I suggest that you contact Mr Beecher at EMR. He may also be able to offer advice on programming these sort of specialist applications.

**Q** I have a BBC A3000, but I don't want to do any impressive document processing or desk top publishing. I just want to do simple wordprocessing like I did on the Beeb with *Wordwise Plus*. What 'real' wordprocessors are available?

Mr C Pattern  
Wareham

**A** Old BBC wordprocessors like *Wordwise Plus*, *Interword* and *View* are available for the A3000. They usually work under the 6502 emulator, although there is a new native mode version of *Wordwise Plus*.

*First Word Plus* seems to be the most popular word-processor specifically released for the A3000. *Pipe Dream* from Colton Software is also a good, coming from the same stable as *View* on the BBC.

**Q** I have heard that the BBC A3000 has a number of international keyboard layouts. I would like to use this facility. How do I carry out the switching?

Ian Graham  
Leeds

**A** The 'swapping' feature is offered by the international keyboard module, and it is possible to switch between any of the available keyboard layouts with a series of key presses. For example by pressing ALT/CTRL/F1 you can select the UK keyboard layout, while ALT/CTRL/F2 will revert to the correct layout for the configured country.

You can also select the keyboard for a country by pressing ALT/CTRL/F12 and then, without releasing the ALT key, typing the international dialling code for the country on the numeric keypad.

## ACORN CUSTOMER HOTLINE

Acorn has released a new set of the four printer drivers, !PrinterPS (v.2.44), !PrinterLJ (v.2.44), !PrinterDM (v.2.46) and !PrinterLx (v.2.46). Below are detailed some of the changes that have been made to this release of the drivers:

Release 2 of Acorn's printer drivers are enhanced versions of the original release, so they should be used in a similar manner to the original versions. Printing files graphically (for example, from !Draw and !DTP) occurs in the same way as under the original release of the printer drivers. Release 2 of the printer drivers mainly improves the text printing facilities, because it provides a special 'fancy' text file format which allows underlining, subscript, superscript, bold, light and so on. The printer driver also lets you put a title on each page and/or number the lines, when printing 'fancy' text. As standard a simple text file as this one comes out as 'fancy' text, but the special features are turned off and so you get the same output as under the original printer drivers.

There is a new printer driver option in addition to Serial, Parallel, Econet and File. This is for NFS printing, for use with the TCP/IP suite available from Acorn. For more details, read your TCP/IP manual.

The drivers now support multiple file printing. Printing can be paused and aborted from the driver. *1st Word Plus* files can be printed as 'fancy' text without having to load *1st Word Plus*.

The new drivers can be obtained from SID or from your local Acorn dealer who has access to SID. Your dealer may levy a small charge for downloading the drivers. Please do not write to Acorn requesting the drivers as we are unable to

supply them directly. The number of bulletin boards supporting the Archimedes is now comfortably into double figures.

While that may not sound many, for a long time there were just four!

I may be biased, but I think that SID is still the one to call.

● It is the forum for technical discussions about the BBC, Archimedes and RISCiX workstations. Unlike any other online system we have access to the minds behind Risc OS!

● It is the only place where you can download new versions of Acorn products, such as the new *65Host* or *ChangeFSI* (though you can get them by post for £19.55 - see *BBC Acorn User* January 1991 for more details).

● It is accessible by direct dial for guest users, and via Prestel and Fastrak for registered users.

● A massive collection of software to download; 80Mb and growing rapidly.

SID is a viewdata system, requiring a parity setting of 7E1 (seven data bits, Even parity, and one stop bit). Dial our guest access on (0223) 243642 and have a look around!

Alternatively, you can write to the SID Editor at Acorn Computers Ltd, Fulbourn Road, Cherry Hinton, Cambridge, CB1 4JN for more details.

We are once again getting a large number of enquiries regarding configuration problems with various machines. We find that in the vast majority of these cases that the batteries which keep the CMOS powered while the computer is off are completely flat. The batteries should be changed every 12 months to be totally safe.

Replacement battery units for the Master 128 cost £4.60 from any Acorn dealer. The fitting of the replacement battery unit is extremely easy and can be performed by experienced users. The Acorn product code for this item is ADT16.

The Archimedes range requires two leak-proof, size AA replacement batteries. The A3000 has a rechargeable battery and so does not need replacing.

## POSTER

An object-based DTP package which allows you to do far more than create posters. In fact there isn't much in the way of DTP design and layout that can't be done with Poster. It's almost an art package. The application is fully RISC OS compliant so can 'talk' to Edit, Draw and any other RISC OS program. Poster comes with its own set of unusual outline fonts but will allow you to use any RISC OS outline fonts. It also has a huge collection of interesting borders and clip art. Two features place Poster in a different league from other packages. Firstly, you can do wonderful things with text. It can be made to flow along any path or it can be moulded into virtually any shape (as can outline Draw files). Secondly, the size of your document is

not dependent upon the limitations of your printer. Poster will allow a document of any size to be created (although 100 metres square is not very

practical). It then prints the document in sections which can be cut and assembled using the trim marks. Poster documents may be used in other DTP packages.

## SNIPPET

A utility which will make you wonder how you ever managed without it. Snippet will allow you to print or save any part of any screen. It will even cope with most programs running under the 65Host BBC Emulator. But Snippet will allow you to do lots more. Sprites may be converted from one mode to another and even 8 bit BBC screens may be easily converted into Archimedes sprites. A vast array of tools allows you to trim sprites, add borders, change colours, use outline fonts to add text, edit pixels, rotate sections and combine any number of sprites to make a single sprite. A carousel allows sprites to be displayed.

## ALSO...

**JIGSAW** — allows sprites of any size to be converted into jigsaws with real jigsaw-shaped pieces. It comes complete with a set of pictures including some by the well-known artist Rodney Matthews.

**JIGLET** — the version for younger users. It has fewer pieces and a more appropriate set of pictures.

**CRAFTSHOP 1 and CRAFTSHOP 2** — programs allowing those with limited artistic ability to create some stunning results. Both packages are currently in use in thousands of schools and homes.

## COPY PROTECTION

We believe that Archimedes users should be able to:

- install software onto hard discs easily
- make as many copies of discs as required for their own use

Therefore we do not:

- make discs impossible to copy
- issue site licences at three, four, or even more, times the single-user price

We have a single price. Discs may not be copied until they have been initialised by entering an ID (such as a name). A registration card bearing the ID is returned to us. This not only assists us but also helps to ensure the security of users' copies.

## "RISCOSITY"

We also believe that Archimedes software should comply with RISC OS guidelines. We have a large number of products currently under development. All of them will be RISC OS compliant.

## ICS FONTS

1st Word Plus First Fonts  
PipeDream PipeDrivers  
Wordpower Power Fonts

Please tell us which of the above you need and specify your printer make and model. A more detailed list of fonts is available.

**Site licence** £50  
For multiple use of First Fonts or PipeDrivers. (Power Fonts are covered by a Wordpower site licence).

**Symbol sets**  
eg. Chemistry, Cech, ICS1 (Forms Desig), ICS2 (IBM characters, Latin 1 includes French, German, Italian, Spanish, Latin 2, Latin 3 includes Esperanto, Latin 4, Mathematics & Physics, Russian - for dot matrix £19 - for laser £29

**24-pin & HP laser typefaces**  
Bodmin, Neston, Old English, Personal, Poyden, Shadow and Initials, Universal Bpt, Universal 10pt, Universal 12pt, Weller, Futura

**Star LC-10 typefaces**  
Black, Bold, Outline, Papyrus, Baby, Shadow, Universal - any 4 £19 - all 7 £29

**PipeDriver Dot 1** £10

**Powerfont NTQ** £13  
Provides near letter quality on ordinary 9-pin printers. Required for some Power Fonts.

At last there is a high-quality range of hard disc upgrades at affordable prices. The ideA range from ICS.

For those who haven't heard, the ideA is a brand new hard disc interface for Archimedes 3000 computers. IDE stands for Integrated Drive Electronics. As the name suggests IDE hard discs have sophisticated electronics built into them, allowing the computer interface to be simpler, cheaper and more reliable. Transfer and access speeds are enhanced.

Most IDE discs are auto-parking, and some have the ability to switch themselves off to save power during periods of inactivity.

Now for the first time we can offer Archimedes users products previously available only in the PC world.

Although the ideA is new, you can use it just like the familiar ADFS. All properly written software will work as usual and there is no conflict of ideAs with existing ADFS or SCSI drives.

Fitting a hard disc in an A300/400 series computer is straightforward and clear instructions are provided. All discs supplied by us are tested and formatted. The complete upgrade kit includes a disc cradle and fan, and is called for example IDEARCIN40. The 40 at the end indicates the hard disc capacity: our Price List shows the sizes currently available (others will be added soon).

A backplane is not needed on the A310 unless you wish to connect other modules. In that case you must use a high-quality four-layer backplane such as the one we offer.

One of the most exciting products in the ideA range is a fully internal hard disc upgrade for the BBC A3000. This is ideal for schools or any location where space is at a premium or where security and portability are important. The IDEASIN20 uses one of the latest 2 1/2" 20 megabyte low-power discs. We cannot be sure yet whether larger capacities will become available for internal fitting.

Although installing the A3000 upgrade is quite easy, it could be dangerous for inexperienced users to open the computer. We have therefore priced this particular product to include collection and fitting at our service centre. (Please make sure we have your daytime and evening telephone number so we can arrange this). Deduct £10 if you do not require the A3000 fitting service.

Ian Copestake Software will be producing a range of other accessories for the A3000. First to arrive is IC PLINTH, a steel monitor stand to which you can later add IC HOUSE, our hard and floppy disc drive housing (ready soon). The Plinth can take a variety of 14" monitors yet occupies less than 18" from front to back when in use. It has anti-slip feet and may be fixed to a desk. Assembly is easy. There is full access to the mains switch and floppy disc drive, while the reset switch is accessible but guarded.

The ideA hard disc controller is also available on its own for those who are confident of choosing a suitable IDE hard disc themselves. The product reference is IDEARC. We must point out that we can only accept responsibility for the performance of the ideA interface with discs we have tested.

## INTRODUCTORY PRICES (guaranteed until 31st December)

IC HOUSE	T.B.A.
IC PLINTH	£21
IDEASIN20	23ms* incl fitting £499
IDEARC	£110

## In the News

**DRAWBENDER** will make Draw files follow a shape of your choice. A useful addition or cheap alternative to Poster, available with or without a set of three decorative fonts. The example above was made using DrawBender with FontFX. We will send a £25 voucher to the purchaser who thinks of the best new name for it!

## EQUASOR

$$m = \sum_{n=1}^{\infty} \left[ \frac{A_n}{h-C-c+d_{n-1}} \right] + n$$

Order now if you want to be one of the first to use this equation building application, with its own mathematical, Greek and other symbols.

## WORDPOWER

Still the best for the Electron, Master and BBC. "I have yet to find a word-processor that gets close to it for usability and quality of output" said BEEBUG recently.

## SCHEMA IN STOCK!

RISC User decided that this spreadsheet 'has to be the first, if not the only choice'. We now have the full (very stylish) package in stock at £96, complete with manual.

## SQUIRREL

You would be nuts not to order this new database from Digital Services at our special offer price of £109! Delivery will be in January.

## BASIC Editor and Toolkit

BBC, Master and Electron users will find BET makes the creation and editing of BASIC programs a real pleasure and encourages the development of a good programming style (Archimedes owners will envy its facilities). Full details on request.

## CITIZEN SWIFT 24

For a limited period we are offering the colour version of this printer for only £270!

## MISMATCH

A delightful new version of the Pelmanism memory game for all age groups. Excellent graphics and (controllable) sound. An ideal introduction to the Archimedes for five-

year-olds. Grown-ups will find it addictive but good for the mind!

## PIPEDRIVERS

If your dot matrix printer has more features than PipeDream knows what to do with, you need Pipe-Driver Dot 1. It provides access to resident and download fonts, ink colours, variable print size and line spacing etc. Like our First Fonts for 1st Word Plus and Power Fonts for Wordpower, PipeDrivers can make foreign language and scientific word-processing a pleasure. And our 24-pin and LC-10 typefaces will brighten your output at full printer speed.

## ARKEY

With more applications on the market a function key strip organiser is indispensable. Arkey users do it without glue! Suitable for BBC and Master too.

## POSTER

Use it on its own or with any DTP program to produce endless special effects at any size. Our price includes a site licence, a range of clip art and borders, and 20 fonts which can also be used with other programs.

# TASK AND WINDOW ORGANISER

TWO can group a number of tasks together and start them up with one double-click on the mouse. Applications can be run, files loaded, directories opened, and star commands executed. Up to 42 task groups may be defined very easily and listed on the screen when the computer starts up. A great help when inexperienced users need access to the system, and a welcome time-saver for old hats.

TWO will instantly re-arrange windows in rotating stacks, piles or a space of their own. No more hunting for the missing one! TWO will also save configuration settings, set Copy and Wipe options, or blank the screen after a specified period of inactivity.

**New from Ian Copestake Software £19 + VAT Sites £60**

## £15 ALL OF A DITHER

On the good old Beeb, things were simple. There were at most just eight colours to choose from. When the Arc came along, the possibilities were greatly increased. Colours in the 16-colour modes on the Archimedes are not restricted to a fixed palette – you can have any 16 you choose from a range of 4096. Furthermore, 256-colour modes were also a feature of the new machine.

The Desktop added its own complications. Because the Desktop environment is designed to work in any screen mode (including those that haven't been invented) it was decided that the Desktop palette should consist of 16 colours chosen from the 4096 the Arc can produce, and that conversions should be made depending on the current mode.

For example, colour 11 of the Wimp palette is bright red. In mode 12 and other 16-colour modes, the palette is changed so it accurately resembles the 'imaginary' palette of the Wimp. In 256 colour modes such as mode 13, the nearest red of the 256 default colours is chosen to resemble Wimp colour 11. The shade of red may not be quite as required, but is the best available.

In four-colour modes the best approximation to the Wimp palette is found in the same way but with only four colours to choose from, the best that can be managed is to set them to four grey-scales. Finally, in two-colour modes the process known as 'dithering' (mixing two colours together in a pattern) is employed to give the appearance of there being more than just black and white to choose from. This doesn't work too well, but you shouldn't really use the desktop in mode 0.

Finding the best available colour becomes more complicated when you consider plotting sprites. To add to matters, a module was developed called ColourTrans to fill the gap between what colours were needed and what colours were

# RISC REVUE

Before dithering...

...and afterwards - new colours

available. You'll find a copy of ColourTrans on your applications discs. Listing 1 shows how to use one of the simplest ColourTrans calls.

Two colours are randomly chosen. These are 24-bit colours, eight bits each for the red, green and blue components. Then, ColourTrans\_SetGCOL is called to choose the best available colour for various stages between the two start colours. Rectangles are plotted to form a scale from one colour to the other. The call ColourTrans\_SetGCOL takes a single parameter – a 24-bit colour of the form &BBGRR00 which contains the red, green and blue components of the colour to be approximated. When done, press a key and two new colours will be picked. You will see that some scales turn out much better than others. Because only 256 of the 4096 possible colours are available in mode 13, there are 'holes' in the palette and you'll see quite large jumps in the scale.

But how does ColourTrans know which colour is nearest? The process used is actually quite simple and revolves around the principle of 'least squares'. Imagine two colours with red green and blue components (r1,g1,b1) and (r2,g2,b2) respectively. The 'distance' between the two colours might be thought of as:

$$\text{dist} = (r1-r2)^2 + (g1-g2)^2 + (b1-b2)^2$$

in much the same way as the distance between two points in 3D space is found. However, the human eye responds differently to the three component colours and so to find the true 'distance' we must weight the individual parts. ColourTrans uses weights of 1, 2 and 3 for the blue, red and green parts respectively. More accurate figures to use are 0.10, 0.39 and 0.51, although the limitations of the Archimedes hardware enable ColourTrans to be right enough. So, our equation becomes:

$$\text{dist} = 0.39 * (r1-r2)^2 + 0.51 * (g1-g2)^2 + 0.10 * (b1-b2)^2$$

Listing 2 illustrates the idea of finding the closest colour using

the formula above. Three centres are chosen for the three basic colours red, green and blue. Then a patchwork of squares is plotted. The colour of each square is determined from its distance from each of the centres. Having found the 24-bit value of a square's colour, the nearest approximation in mode 13 is found by `FNclosest`.

Note that the colour found by `FNclosest` is an 'internal colour number'. In order to use the number in a `GCOL` it must first be converted into a `GCOL` number. This requires the bit-shuffling performed by `FNcolournumtogcol`. The internal number of a colour is the form used by the hardware and by calls such as `OS_ReadPalette` which is the reason for the conversion in listing 2.

A further problem arises when selecting a colour with `GCOL` in a 256 colour mode. On the Beeb, `GCOL 0.129` didn't choose colour 129 but instead set the background colour to 1. For this reason, the extra keyword `TINT` is provided on the Arc. Two of the bits of a colour are taken off and these are appended to a `GCOL` after the `TINT`. You can see the shuffling needed in `PROCgcol`.

Returning to the Beeb and Master, to get around the limited palette 'dithering' was used. Orange could be produced by using a chessboard arrangement of red and yellow pixels. The ECF (extended colour fill) was invented for this purpose and it is still available on the Arc using `VDU 23` with various parameters. The Wimp uses these when trying to produce different greys in mode 0 and the command `Wimp_SetColour` automatically chooses an ECF if the current mode is a two-colour one and the colour selected is in the range zero to seven.

However, the ECF patterns are little use in 256 colour modes. I thought it might be nice to try dithering in these modes since the number of possible colour combinations is considerable (256\*256 in fact). Listing 3 represents a 'brute force' approach to the problem.

The idea is a simple extension

of listing 2. To find a particular colour, all 65,536 combinations of colours are considered. Each pair of colours is averaged (the red, green and blue parts are added together and the totals divided by two) and the closest average colour is found. Sometimes both components will be the same colour. They may be quite different however. To get the colour &80808000 we could mix &40404000 with &C0C0C000 or &70707000 with &90909000.

There are two main loops, one inside the other. The registers `count` and `count2` contain the colour pair currently being examined. To minimise the calculations performed within the central loop, lookup tables are first constructed. There is one each for red, green and blue and they contain values of  $\text{weight} \times (x \times x)$  for values of  $x$  from 0 to 255. Comparing the outputs of listings 2 and 3 shows how effective dithering can be in producing subtle differences in colour.

### REVIVING MODULES

Less well-behaved applications and, particularly, games sometimes unplug some of the relocatable modules in the Arc in order to release extra memory for them to use. Individual modules can be reinstated using the command `*RMReinit` and the command `*Unplug` with no parameters will provide a list of those modules to have been zapped. However, an easier solution is to use listing 4 courtesy of Nick Furness and Mark Stedman of The Perse School.

The call they use to investigate the state of modules is `OS_Module`. With `R0=19`, this call 'enumerates' Rom modules taking in `R1` a module number and in `R2` a value indicating which 'area' to examine. `R2=-1` means look in the Rom, `R2=0` to 3 means look in the appropriate expansion card.

On exit, the call returns a pointer to the module name in `R3` and in `R4` a number indicating the status of the module. This can be -1 (unplugged), 0 (inserted

but dormant), 1 (active) or 2 (running).

Any unplugged modules are reinstalled and a counter is kept of how many have been brought back to life.

### STARRY EYED

A little graphic number here from BAU regular Dave Lawrence. Listing 5 on the yellow pages displays and animates a set of stars to give the appearance of movement through space.

It is, as you might expect, written in machine-code. The stars are plotted directly on a mode 13 (256-colour) screen for speed and simplicity. Each star is stored in 16 bytes and the stars are initialised with randomly chosen values in `PROCstars`. The first word contains the  $x$  co-ordinate and the second the  $y$ . The  $x$  co-ordinate is shifted left 16 so that small velocities can be dealt with without the need for floating-point arithmetic. The next word contains the velocity and the final word is used to store the previous position of the star so it can be deleted correctly.

The main loop consists of loading a star's data into registers, deleting the old image, moving the star on (replacing at the right edge if it has gone off the left) and replotting it. To enhance the depth effect, more distant stars are plotted in darker colours. Each star's velocity is used to determine which colour is chosen from the table at `colours`.

You can alter the number of stars plotted by changing the value of the variable `stars`. You might also like to try different velocities. To halve the speeds change the `<<15` to `<<14` at line 200. You will also need to change `LSR #15` to `LSR #14` at line 560 so that the correct colours are used.

### £10 EDIT CURE

Now that so many outline fonts are available, a bug in *!Edit* has come to light, namely that any more than about 30 fonts will cause it to crash. A solution comes from Graham Allan of St Andrews who points out that

Arc trekking?

*!Edit* only checks what fonts are available at startup. Graham's solution is to fool the program at startup into thinking there are no fonts by temporarily changing `Font$Path` - the system variable that points to the `!Fonts` directory. Once installed, `Font$Path` can be reset to its old value.

First, ensure you have a backup copy of *!Edit* before you start making the changes. Next, rename the `!Run` file as `!Run2`. It's a good idea to load *!Edit* before you do this because you'll need it to create a new `!Run` file. This should be an Obey file and it goes like this:

```
wimp$lot 8k 8k
set Edit$Temp <Font$Path>
set Font$Path <Obey$Dir>.
run <Obey$Dir>.
!StartEdit %*0
set Font$Path <Edit$Temp>
unset Edit$Temp
```

Finally, type in the short Basic program in listing 6 and save this along with the new `!Run` file as `!StartEdit` in the `Edit` directory.

The solution works by redirecting `Font$Path` somewhere silly and then starts *!Edit* by calling `!Run2` as a sub-task. The call `Wimp_StartTask` is used to create one task within another. The call `OS_GetEnv` is used to pass on to `!Run2` any parameters (for example, the filename of an `Edit` file you've double-clicked).

### SHOW US YOURS...

All programs, ideas, hints and tips are most welcome. Send them to: Risc Revue, BBC Acorn User, Redwood Publishing, 20-26 Brunswick Place, London N1 6DJ. Hundreds of thousands of itchy digits are waiting to type in your code.

# junior's database

## ...child's play in a grown up world!

Junior Database has been designed to meet the specific needs of the National Curriculum and is destined to become a class favourite with teachers as well as children of all ages.

Junior Database comes with an interactive Hotlinked Tutor (*the first of its kind*). There's no longer any need for a lengthy or offputting manual, Hotlinked Tutor is your onboard personal expert, on hand to advise, correct and guide you through the fascinating world of data, helping to create colourful graphs that will bring your facts and figures to life. One day all applications will be written this way...

## Archimedes COMPUTERS

### Special New Year Bundles

A3000 Cub 3000 Colour Monitor  
fitted with 2MB RAM **£785**

#### Learning Curve

A3000 LC with Cub 3000 colour  
fitted with 2MB RAM **£884**

A3000 LC with Cub 3000 colour  
fitted with 4MB RAM **£959**

A420/1 LC with Cub 3000  
enhanced to 4MB and 40MB Drive **£1485**

#### Archimedes A410/1

A410/1 Cub 3000 colour **£1285**

A410/1 Taxan 775 **£1445**

410s enhanced to 2MB and 20MB Drive

#### Archimedes A420/1

A420/1 Acorn colour **£1485**

A420/1 Taxan 775 **£1645**

420s enhanced to 4MB and 40MB Drive

and Archimedes Learning Curve

#### Archimedes A440/1

A440/1 Cub 3000 colour **£1699**

A440/1 Taxan 770+LR **£1899**

A440s come bundled with Pipedream 3

#### New A540

ARM3 + 100MB SCSI

4MB upgradeable to 16MB **£2995**

Carriage £8/computer **£12/system**

**Special Offer**  
**Deskjet 500**  
**£379(a)**  
**3 year warranty**

### technoTablet

Our 12" by 12" working area technoTablet offers a resolution of 1000 lines/in and connects through the serial port of the computer. The tablet can take over virtually all the functions of a mouse simplifying the use of graphics packages.

A four button puck moves over the special surface, its cross-wires allowing simple and accurate transfer of drawings. The optional stylus will make tracings, line drawings etc much easier and more accurate.

The driver software is genuine RISCware and provides commands to turn the tablet on or off, select relative or absolute coordinates, change puck movement sensitivity and scaling. The package includes the tablet, puck, software and mains power supply, no connections are required to the ARC main board.

**technoTablet** **£209(a)**  
Stylus **£15(d)**  
PC mouse drivers **£12(c)**  
and art package

**Please call for prices on a  
range of printers**

## What we offer in addition to efficient sales service and professional backup!

We not only offer professional advice when you are purchasing your system but we will also provide friendly assistance afterwards. All our products carry a 12 month full warranty for parts and labour.

### ARCHIMEDES LEARNING CURVE

An Archimedes 420/1 with 2 MB RAM  
+ 20 MB Hard Disc and

First Word Plus wordprocessor

Genesis database

Acorn Desktop Publisher

PC Emulator and DOS software

Informative video and parental guide  
to the National Curriculum

**Price options shown on left**

### TECHNO 410/1 SPECIAL

Offer extended due to popular demand.

Archimedes 410/1 upgraded to full  
440/1 specification with 4 MB RAM  
and 50 MB Hard Disc (Acorn)  
plus

Taxan 770+LR Multisync Monitor  
and including Pipedream 3

as well as

RISC OS Extras & SID Utilities discs,  
a packet of discs, a printer lead and  
a mouse mat.

for only **£1819** carr £12

*Finance available on chargeable basis.*

**NEW**  
*techno* **SCAN II**

### Probably the definitive monochrome scanning package!

The all NEW technoSCAN II package provides full monochrome operation at 400 dpi as well as 8 and 16 level grey scale scanning and provides the following features:

Suitable for all Archimedes micros and integrates fully with the multitasking RISC OS environment.

Advanced memory management system releases memory when not required allowing scanning and DTP in a 1MB computer.

Flexible zoom control allows palettes to be imported, tailored and resaved with more powerful tone and tinting features than most painting packages.

Interactive help and a superb manual.

Direct printing with RISC OS drivers.

Saves sprites direct into PAINT and DTP or to disc.

Saves sections and palettes into any graphics mode.

*At the same low price as the well tested original.*

*technoSCAN II complete with interface card and manual* **£149(b)**

*technoSCAN II for A3000* **£175(b)**

*technoSCAN II upgrade for techno SCAN* **£22.50(c)**

### NEW A440/1 technoTURBO

The latest in our popular range of Archimedes bundles is the fastest yet.

A440/1 with a 50 Mb hard drive and TAXAN 770+LR Multisync monitor.

**Fitted with 30MHz ARM 3  
and a magnificent total of  
8 Mb RAM**

A440/1 technoTURBO

**£2999**

carr. £12

### LASERJET SPECIAL

Professional print quality on your Archimedes is now available at a budget price with an unbeatable combination of high quality hardware, software and on-site maintenance.

Our package consists of:

- a free standing Hewlett Packard Laserjet IIP printer
- 2 MB RAM Upgrade giving a 2.5 MB Total
- One years free on-site maintenance by the printer manufacturers.

This system is independent of your computers' RAM and upgrades and is fully compatible with Archimedes and PC systems without any additional hardware. It can be inexpensively upgraded to 4.5 MB RAM.

Laserjet IIP with 2.5 MB RAM **£895(a)**

Optional Postscript emulation cartridge to link directly with the RISC OS postscript driver. **£299(c)**

## Archimedes EXPANSION OPTIONS

### A3000 RAM UPGRADES

Extra 1Mb **£340(\*)** Extra 3Mb **£520(\*)**

### ARM 3 UPGRADES

A300/A400 etc **£445(\*)**

### 400/1 RAM UPGRADES

1Mb RAM upgrade (410/1) **£79(c)**  
2Mb RAM upgrade (420/1) **£158(b)**  
3Mb RAM upgrade (410/1) **£235(b)**

### ARCHIMEDES MODEM PACK

MIRACOM WS4000 + LEAD and ARC  
COMM Software Modem Pack. **£139(b)**

### SPECIAL NEW YEAR DISC PRICES

3M 3.5" DSDD Discs  
Box of eleven **£6.50(d)**

### TRACKER BALL

A sturdy, high quality tracker ball is now available to replace the Archimedes mouse. You will no longer run off your mouse mat and at the same time you can save the valuable desk space. The tracker ball is fully compatible with the Arc mouse driver. **£35(c)**

### A3000 4MB RAM CAPABILITY

The TechnoRAM Card for the A3000 with either 1MB or 3MB on board, allows you to expand up to 2 or 4MB. Totally compatible with Econet upgrades.

1MB technoRAM **£79(c)**

3MB technoRAM **£179(c)**

### technoSCSI Packages

Now with the NEW technoSCSI card from Brainssoftware, the most advanced SCSI card available.

Handles up to 4 SCSI drives with data transfer up to 1.5 Mbytes/s (synchronous mode at 2.8 Mbytes/s). Full 16 bit controller with tagged cache. Full MEMC module using the latest technology with both internal and external SCSI connectors. Acorn compatible software with RISC OS interface. Supports tape streamers, scanners and laser printers. MEMC1a not required.

technoSCSI card for 300/400 **£179(b)**  
40 Mb internal + SCSI card **£399(a)**  
10 5Mb internal + SCSI card **£899(a)**  
Now for A3000  
40 Mb external + SCSI card **£499(a)**  
105 Mb external + SCSI card **£999(a)**  
313 Mb external + SCSI card **£1999(a)**

### MULTIPOD PROFESSIONAL

Professional design and use of latest hardware/software technology have enabled this five function module to provide the highest quality performance at economical and realistic price. The five functions are fast-scan video digitiser, sound digitiser, serial port, instrumentation/joystick port and 3 BBC compatible ROM sockets.

MULTIPOD PROFESSIONAL **£117(b)**  
MULTIPOD PROFESSIONAL FOR THE A3000 **£145(b)**  
FILTER SET FOR VIDEO CAMERA (RGB) **£15(d)**

### A3000 EXPANSION

AEDA external floppy drive adaptor **£30(c)**  
Wild Vision Chroma 220 **£155(b)**  
Wild Vision Chroma 235 **£199(b)**  
Wild Vision Chroma 250 **£355(b)**  
Acorn MIDI/User port **£49(b)**  
Chromatext **£39(c)**  
XAT Video Utilities Package **£79(c)**  
MultiPod **£145(b)**  
technoSCAN **£175(a)**  
Tracker Ball **£35(c)**  
technoTABLET (needs serial kit) **£209(a)**  
Stylus **£15(d)**  
Serial upgrade kit **£19(c)**

### A3000 technoSCSI

*We carry a full range of software and  
accessories for BBC B and Master as well as  
spares and upgrades.*
- Acorn 1772 DFS kit for BBC B** **£49(d)**

## technoCAD for Master 128

The best feature of technoCAD is not its outstanding performance, not its unique ability to allow creation of complex icons, not the quality of output from printers or plotters. The best feature is the unprecedented ease with which it can be mastered. With easy to use single key commands limited to three keys, pull down menus and a clear and concise, easy to read manual, technoCAD is truly the system any one can use.

technoCAD will meet the needs of most professional applications and it is an ideal tool for teaching CAD in technical schools, CDT departments and colleges. **£50(c)**

## WINCHESTER DRIVES

- P30HD 30 Mb drive for ADFS** **£399(a)**  
*Larger sizes available on request.*

### 8 Meg RAM Upgrades

- R810 – A410/1 upgraded to 8MB **£910**
- R820 – A420/1 upgraded to 8MB **£859**
- R840 – A440/1 upgraded to 8MB **£749**
- R814 – R140 upgraded to 8MB **£749**

### Turbo Charge Your Archimedes

Increase the speed of your Archimedes by a factor of THREE to SIX times (depending on the software you are running), with Watford's ARM3 Upgrades.

- ARM-3 20MHz Upgrade Board **£339**
  - ARM-3 30MHz Upgrade Board **£389**
  - MEMC 1A Upgrade **£49**
- (ARM 3 price includes a FREE Chip extraction tool)  
(Special Offer – If purchased together with an Archimedes Micro, then not only will we fit the card Free of Charge but we will also reduce the price by £40 i.e. You pay only £309 for ARM3 20MHZ & £359 for ARM3-30MHZ)

### Archimedes RAM Upgrade

All our memory upgrades are simple to fit. No soldering required. Fitting instructions supplied.

- R302-A3000 – to 2MB RAM Upgrade **£62**
- R304-A3000 – to 4MB RAM Upgrade **£179**
- R311-A305 – to 1MB RAM Upgrade **£75**
- R312-A305/310 – to 2MB RAM Upgrade **£245**
- R314-A305/310 – to 4MB RAM Upgrade **£435**
- R412-A410/1 – to 2MB RAM Upgrade **£49**
- R413-A420/1 – to 4MB RAM Upgrade **£95**
- R414-A410/1 – to 4MB RAM Upgrade **£137**

### Archimedes Hard Disc

Watford's Hard disc drives for A310 & A410 series fit internally into the space provided. The 'simple to follow' fitting instructions supplied makes drive fitting very easy. All disc drives are self parking. 40Meg & 53Meg drives are fast 24mS type, while 20MHz are 28mS.

P.S. A310 upgrades require a backplane and a fan.

- 3HDP – Hard Disc Podule only **£135**
- 3HD20 – 20Meg H' Disc + Podule for 310 **£299**
- 3HD40 – 40Meg H' Disc + Podule for 310 **£389**
- 3HD50 – 53Meg H' Disc + Podule for 310 **£474**
- 4HD20 – 20Meg Hard Disc for 410 **£165**
- 4HD40 – 40Meg Hard Disc for 410 **£269**
- 4HD50 – 53Meg Hard Disc for 410 **£399**
- A3000 20Meg Hard Disc + Podule **£359**
- A3000 40Meg Hard Disc + Podule **£489**

### Convert your Archi 410 to a 420 or 440 with Watford's unique Upgrade Kits

- UP10 – to 2MB RAM + 20MB Hard Disc **£210**
- UP15 – to 2MB RAM + 40MB Hard Disc **£325**
- UP20 – to 4MB RAM + 20MB Hard Disc **£299**
- UP30 – to 4MB RAM + 40MB Hard Disc **£415**

## ULTIMUM – Archimedes A3000 Podule Racking System

### THE ONLY LOGICAL WAY TO EXPAND YOUR A3000 COMPUTER

The accepted standard for Archimedes computer expansion is the Acorn Podule, designed initially to fit the old 310, and also for the later A400 and A400/1 series micros. The podules fit inside these computers up to four at a time. The A3000 is the little brother of the family, but can only have one podule at a time, plugging into the back of the computer.

Other attempts have been made to expand the A3000 by trying to introduce a 'mini-podule'. This is impractical for many reasons, amongst which is the reluctance of manufacturers to produce them. Nobody wants to re-design podules already produced. Some cannot be produced on a 'mini-podule' as they are far too complicated and simply wouldn't fit.

Watford Electronics listens to the demands and requirements of its customers, and we are glad to say that we have come up with the only real solution to the A3000 expansion problem. The ULTIMUM Podule Racking System allows up to three FULL SIZE standard Archimedes 300/400 series podules to be fitted to the computer. In addition, there is also provision for a hard disc drive and a podule to be fitted internally.

Since the ULTIMUM Podule Racking System takes proper full size podules, you will be able to use any of the currently available peripheral equipment, from companies like Computer Concepts, Armadillo, Acorn and of course, our own brand.

Fitting the podules to 'ULTIMUM' is simple. They are neatly fitted inside the metal case of the rack, avoiding the previously untidy method of hanging the podule off the back of the computer, risking damage to both, it and to the computer.

'ULTIMUM' has its own power supply, so no strain is put on the A3000 power supply. There is also an IEC mains output socket for an Acorn type monitor so reducing the number of plugs required to go to the mains. The ULTIMUM is rigidly clamped over the top and under the computer, and allows direct access to the floppy disc drive and reset button, rather than obstructing access as on other systems. One can also place a standard monochrome or 14" colour monitor (even a multiscreen type) safely on top. The mounting method employed is so firm that the computer could even be safely transported without the assembly falling apart.

By popular demand, we are now able to supply refurbished and fully guaranteed, Acorn range of Micros.

(Please telephone for price & availability)

### Archimedes to BBC Serial Link Mk 2

Using this simple data link, it is possible to solve all your BBC to Archimedes data transfer problems. The kit is supplied with a disk, and the necessary cable to connect the two computers.

New RISC OS Version

Only £15

### Archimedes 5.25"/3.5" Disc drive Interface

With this interface it is possible to connect almost any 5.25"/3.5" disc drive with its own power supply to the Archimedes. Up to 4 disc drives can be connected. Fully Buffered Board. NO SOLDERING is involved. Supplied complete with necessary lead.

Only £21

### Special Education Prices

All education establishments qualify for special education prices on micros, etc. Please write in or telephone (0923) 37774 or 50335 for written quotation.

## Important Notice to All our Customers

Watford Electronics only supplies printers fitted with British Specification 240V AC Mains 3 core cable with connections for Live, Neutral and Earth. We do not sell, nor intend to supply grey imports from Europe or Hong Kong with incorrect 220V European mains connections (2 core cable!) which could be dangerous to the end user.

## Megabuffer 256

The Smallest 256K Printer Buffer Unit in the world 38mm x 130mm x 134mm.

This new Megabuffer 256 from Watford is a full featured 256K Printer Buffer. The features are:

- Improves efficiency by making more efficient use of computer and printer.
- Compatible with any computer and printer that uses Centronics Parallel connections including all BBCs, IBM PCs, etc.
- Total compatibility with all software.
- Cheaper phone bills when using your Modems.
- Ideal for those doing large graphics screen dumps that are slow to print.
- Multi-Copy facility allows you to print several copies via Megabuffer without going through your computer.
- Data Dump facility is included.
- Built in text unit for both the buffer & your printer.

Only £119 (carr £5)

## Universal Printer Sharers/Changer

Connect up to 5 Micros to 1 printer or 5 Printers to 1 Micro with our combined, Sharer/Changer. These Units are made to a very high standard. For extreme reliability, they all have Printed Circuit Boards mounted inside the case, (not a Spaghetti Junction of wires). Internal connection is made via high quality ribbon cables.

(Ideal for School environments)

Connects	Serial	Centronics	P&P
2 to 1	£16	£17	£3
3 to 1	£22	£24	£3
5 to 1	£36	£32	£4

(Cables extra at £6 each. Please specify type required when ordering)

## 2 Way Compact Printer Switch

A handy 2 way printer switch. Enables one micro to be connected to 2 printers or vice versa.

Centronics £18; Serial £17  
(Cables extra at £6 each)

## Plinths for the BBC B & Master 128K Micros

Protect your computer from the heat of your VDU. Our micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and VDU, whilst the double height version provides enough room for our stacked disc drive and other peripherals like, Eprom programmer, music unit or simply discs & stationary. The computer slides neatly in the lower section allowing easy access to remove the lid. Colour: Matching BBC Beige.

Single BBC Plinth	420 x 310 x 105mm	£13
Double BBC Plinth	420 x 310 x 210mm	£24
Single Master Plinth	490 x 310 x 105mm	£14
Double Master Plinth	490 x 310 x 210mm	£26

(Carr. Single plinth £2; double plinth £3)

## Perspex Printer Stand

Give your Computer System a touch of Class with our elegant, smoke finished Perspex Printer stand.

80 Column version	£16 (carr £3)
136 Column version	£20 (carr £4)

## Listing Paper (Perforated)

• 1,000 Sheets 9.5" x 11" Fanfold Paper	£7
• 2,000 Sheets 9.5" x 11" Fanfold Paper	£11
• 1,000 Sheets 9.5" x 11" NCR 2 Part Fanfold	£21
• 1,000 Sheets 15" x 11" Fanfold Paper	£9
• 1,000 Sheets true A4 Fanfold Paper 70gms	£11
• 2,000 Sheets true A4 Fanfold Paper 70gms	£21
• Teleprinter Roll (Econo paper)	£4

(All our Fanfold paper is Micro perforated leaving a smooth clean edge when the tractor feed strips are detached).

Carriage 1K Sheets £2.50, 2K Sheets £3.00

## Printer Labels

(On continuous fanfold backing sheet)

1,000 90 x 36mm (Single Row)	£6.00

## Archimedes Real-Time Digitiser

Now supplied with NEW RISC OS Version Software

Watfords' Archimedes Video Digitiser is the most sophisticated digitiser ever designed for a micro. It provides a fast and flexible means of capturing images from a video camera or recorder for display and manipulation on the Archimedes range of Micros. Off-air television signals may also be digitised via a video recorder or TV tuner. Please write for further details.

**Price £175**

A Set of Colour Filters for colour image grabbing

using a video camera

New Risc-OS Software Upgrade

£16

£39

## Archi Graphic Tablet

The Archi Graphic Tablet offers performance and accuracy comparable to other tablets priced at well over £400, and has the useful addition of a liftable cover, which can hold tracing material or menu templates securely. The package is supplied complete with sophisticated Archi software. (Now, fully LinCAD compatible. Recommended by Linear Graphic).

(FREE this month, PC Mouse Drivers & Art package)

(Now, fully LinCAD compatible. Recommended by Linear Graphic).

**Special Price £225**

(Price includes Tablet, Leads, Software & Puck)  
Stylus Optional Extra £29

## Disc Plonker Rack

When using ones micro, there is a tendency to have more than one Disc on the desk. This exposes them to the hazards of fingerprints, scratches, dust, coffee and an untidy desk. Why not protect your valuable data from all these hazards with the help of our extremely handy and low cost DISC PLONKER RACK. Holds up to eight 5.25" discs.

Protection at Only: £2

## Acorn & Watford DFSs

- Watford sophisticated DFS ROM £16.00
- Watford DFS Kit complete £69.00
- We will exchange your existing ROM for Watford's ultimate DFS ROM at only £12.00
- DFS Manual (comprehensive) £6.95
- Acorn DNFS ROM £17.00
- Acorn ADFS ROM only £25.00
- Acorn 1772 DFS ROM Kit £49.00

(The single Density DFS system is now old technology. Like Acorn, Watford too have decided to replace it with the their more up-to-date 1770 DDFS interface. We have informed most of the software houses of this decision in order that they can ensure compatibility with our highly sophisticated and fully Acorn compatible DDFS).

## Watford's MkII 1772

### Single/Double Density DFS

Many of our customers have wanted to use our superior DDFS and Acorn ADFS together. Now our Mk II DDFS Board with its 1770 Disc Controller, has been adapted to allow the use of Acorn ADFS as well. It also has all the commands of the Acorn's 1770 DFS, plus the added features.

Added features include:

- Acorn ADFS compatible – Use ADFS on our DDFS board.
- Tube host Code – No longer any need to have the DNFS in your machine to use Co-Processors, even the CoPro and Master 512.
- Auto 40-80 Track sensing – no need to fuss with 40/80 track switches (even works with protected disks).
- An extremely powerful 8271 emulation – ensuring compatibility with almost all software.
- New low profile – small footprint board.
- Fits with all third party ROM boards.
- Option to double the speed of file handling operations – BPUT and BGET.
- Operates in both single and double density modes.
- OSGBPB has been recoded, increasing still further the speed of file handling.

Please note that not all DDFS's are capable of providing either the full 80% storage increase or of allowing a file the full size of the disk – Ours allows both of these!

If you already have a DDFS (any manufacturer), and wish to upgrade to our MkII version, then simply return your existing ROM and DDFS board and we will supply the new DDFS for only £39.00.

- SPECIAL PRICE £44.00
- DDFS Manual (No VAT) £6.95
- We will exchange your existing DFS Kit for our sophisticated DDFS for only £30.00

Please note, as the MkII DDFS is a hardware and software upgrade, it is not possible for existing Watford DDFS users to simply exchange the ROM for the new version.

## 3M – Diskettes

3M – SCOTCH Diskettes with Lifetime warranty from Watford Electronics your 3M Appointed Distributor

- 10 x 5.25" S/S D/D 40T (744) £5
- 10 x 5.25" D/S D/D 40T (745) £5
- 10 x 5.25" S/S D/D 80 Track (746) £7
- 10 x 5.25" D/S D/D 80 Track (747) £7
- 10 x 5.25" 1.6M D/S D/D High Density for IBM XT and AT £11
- 10 x 3.25" S/S D/D 40/80 Track £7

**(0923) 50234 or 33383**

## Floppy Head Cleaner Kit

The heads in floppy drives are precision made and very sensitive to dirt. The use of cleaner Kit is a sensible precaution against losing valuable data. It is recommended to clean the drive head once a week. It is very simple to use. Available in 3.5" & 5.25", please specify.

**Price £4**

## Antistatic Lockable Disc Storage Units

Gives double protection – Strong plastic case that affords real protection to your discs.

Antistatic helps avoid data corruption whilst in storage. The smoked top locks down.

Dividers and adhesive title strips are supplied for efficient filing of discs.

- M35 – holds up to 50 5.25" discs £4.95
- M85 – holds up to 95 5.25" discs £6.95
- M25\* – holds up to 25 3.5" discs £4.95
- M50 – holds 50 3.5" discs £6.50
- M10 – holds 8 of No. 10 Data Cartridges £15

\* Not lockable

## Plastic Library Cases

Holds up to 10 3.5" Discs.

£1.50

Holds up to 10 5.25" Discs.

£2.00

## Dust Covers (For our Disc Drives)

- Single CLS (without PSU) £3.20
- Single CS (with PSU) £3.25
- Twin CLD (without PSU) £3.85
- Twin CD (with PSU) £3.90

## Disc Albums

Attractively finished in black leather-look vinyl. Stores up to 20 discs. Each disc can be seen through the clear view pocket.

£4

## Special Bulk Offer on Discs

(Supplied packed in Anti-Static Lockable Storage Units)  
(Lifetime warranty on Discs)

## BULK PACK DISCS in lots of 100

Type	S-S 40T	D-S 40T	D-S 80T
• Without Sleeves 5.25"	£30	£35	£40
• With Sleeves 5.25"	£33	£38	£43
• 3.5" D/S D/D	£29 for 50		£52 for 100

## Quality Disc Drives from Watford

To help you decide which drive is the most suitable for your needs (and your pocket!), we have produced the table below. The tinting of the boxes indicates 40/80 track switchable disc drives. For ease of use, the switches are mounted on the front panel.

**All our Disc Drives are Double Sided and will operate in both Single and Double Density modes.** Extensive experience of the usage of disc drives suggests that the JAPANESE drives currently represent about the best in terms of speed, reliability and overall "elegance" available for the BBC Micro. Various UK "manufacturers" of disc drives for the BBC micro (more accurately, "packagers" label other manufacturers drives with their own name). We buy the high quality NEC and Mitsubishi drives in large quantities directly from the manufacturers, package them and sell them at "dealer" prices direct to the public.

If you look around the popular BBC micro press, you will find that the prices we quote for the top quality, new slimline disc drives are, virtually without exception, some of the best around. These prices, coupled with the backup of one of the country's largest distributors of BBC peripherals provides a superb deal. Unless you anticipate using dual drives in a fully expanded BBC system for long periods of time with little ventilation, then we suggest that our range of "CL" disc drives without the PSU (Power Supply Unit) would be quite adequate (extensive tests within our workshops have confirmed this). All drives are supplied complete with a SPECIAL UTILITIES Disc, Cables and Plugs. The Drives with power supply have a mains moulded plug for safety purposes. **Ideal for Schools & Colleges.**

When using a BBC Micro, most people find themselves short of desk space. The Watford's BBC Micro plinths form an ideal way of recovering some of this precious space) your BBC Disc Drive and Monitor can all occupy the same vertical footprint and still be comfortably situated. With the Watford Double plinth, your Disc Drive is mounted vertically at one side, leaving a very valuable area directly in front of you for such useful items as spare discs, pen, paper, reference manuals, etc. Follow the trend with a Watford plinth. (Turn to the 4th page of our advert for the Plinths).

P.S. All our 5.25" Disc Drives with PSU are compatible with the Compact Micro. All you require is the special Compact Disc Drive Cables designed by us.

## Our Disc Drives conform to BS415

## "Test Bureau Approved for Use in Education"

Capacity	Drives without P.S.U.		Drives with P.S.U.	
	Single	Twin	Single	Twin
400K (720K)	CLS 400S £72		CS 400S £82

<b>• TWIN Disc Drive Case, complete with Power Supply &amp; Cables £43</b> <b>Securicor carriage on Disc Drives £6 to £7</b>				

Prefix C = Cased Drive L = Less PSU S = Single D = Double  
Suffix S = 40-80 Switchable

e.g. CLS400S = Cased Disc Drive, Less power supply unit, single 5.25" 400K, (720K in double density); Double sided; 40/80 track switchable.

**Refurbished Disc Drives now available**  
**CLS400 £50; CLD800 £98; CS400 £59; CD800**

**Special Cable to connect both 3.5" and 5.25" Disc Drives simultaneously to the BBC Compact £13**

## Special 40/80 Disc Drive/DDFS Mk II Offer

• The popular 40/80 track 400K single Disc Drive, Double Sided, cased with Cables. Plugs directly to your Micro.

• Watford's extremely popular DDFS Disc Interface (allows 720K storage). Will run in both Single & Double Density modes.

• A comprehensive User Friendly Manual.

**A Bargain at Only £119 (£7 carr)** (Offer valid while stocks last)

## 3.5" DISC DRIVE OFFER

These top quality 3.5" Double sided, 80 track, 1 Megabyte (unformatted each Disc Drives), are attractively finished in BBC beige. They are supplied complete with all cables and a Utilities Disc.

Drives to connect to BBC Micros own PSU

• CLS35 400K Unit £62 • CLD35 Twin 800K £109

Drives with built-in Power Supply Unit

• CS35 Single 400K £84 • CD35 Twin 800K £126

(P.S. CS35 Single is supplied in a twin case with a blanking plate to enable easy expansion to a dual drive at a later stage).

## DISC DRIVE SHARER

(Ideal for educational establishments)

At last, a low cost alternative to the Econet system. Watford's Intelligent Disc Drive Sharer allows you to connect 3 BBC micros (model B, B+ and Master series) to a single or double disc drive. Running under any DFS or DDFS, this intelligent unit will automatically queue the computers. Each computer has a status light dedicated to it. If it is green you will get immediate access to the disk, and red means that you are next in line. The unit plugs directly into the disc drive socket on each computer and is powered by the mains. (N.B. Not for use with ADFS.)

Price includes 3 Cables

Offer Price : £55

## CDPM 800S

## DP35-800S

Twin 800K Double sided 40-80 track switchable disc drives mounted in an attractively finished Beige colour plinth for the BBC Micro. Supplied complete with integral power supply, cables and Utilities disc. The mains switch with neon On/Off light indicator, and the two 40/80 track switches are mounted on the front panel for ease of use.

## CDPM 800S for the BBC B & Master £165

A Double disc drive with a difference! Times are changing fast for the floppy disk, and whilst the current standard for the BBC B and Master series is the 5.25" disk, the standard of the future will most certainly be the smaller; faster and more reliable 3.5 inch disks - now a standard feature of both the Master Compact and the Archimedes Series.

To support the present disc drive users, and cope with the future, we have designed our own plinth-mounted disk system - called the DP35 800S. It contains both the 5.25 inch and the 3.5 inch drive formats as well as offer a firm and rigid support for a monitor on top. With the BBC Micro underneath, the plinth makes a surprisingly small footprint on the desk - leaving you more space to work with.

The 5.25" disc drive is 40/80 track switchable. DP35-800S has its own power supply, independent of the BBC Micro.

## DP35-800S for BBC/Master £154

(Securicor Carr. £7)

(The above drive units are 2 Megabytes unformatted)

**Continued → → → → → → → →**

## QUEST MOUSE Mk II

- Quest Mouse II & Quest Paint £58
- Quest Mouse II, Quest Paint, AMX Stop Press & Pagefont £89
- Quest Mouse II only £29
- Quest Paint Software only £34
- Quest Font Disc (22 Text Fonts) £15
- Quest Mouse Mat (Red or Blue or Green please specify) £3
- Quest Colour Dump Disc – This new software allows you to print direct from Quest Paint to your Integrex Colour Printer £18  
(P.S. Quest Paint is not compatible with BBC Compact)

Quest Paint is the winner of the BBC Acorn User 1990 Award for the Best Art/Graphics software

## ConQuest

Quest combined with ConQuest and Acornsoft GXR ROM make up THE MOST POWERFUL drawing packages available for the BBC range. Quest Paint is able to take advantage of almost any additions to your machine, such as Shadow or Sideways RAM. ConQuest takes this principal even further, by utilising the otherwise normally incompatible Sideways RAM facility by holding pictures in them.

**ConQuest ROM Package** £30  
(Price includes software in ROM and a comprehensive Manual).  
(Not Compatible with BBC Compact)

## ARCHI Mk II MOUSE

An extremely reliable replacement mouse for Archimedes Micro £39

## QUEST – Tracer ball

An attractively finished, extremely reliable, mouse replacement, input device. Requires very little desk space. Connects directly to your BBC B, BBC Master or Archimedes Micro.

**QT-10 BBC/Master Version** £32  
**QT-20 Archimedes Version** £35

## RB2 Marconi TRACKER BALL

RB2 (AMX/Quest compatible) £45  
RB2 including Quest Paint £75  
RB2-A for Archimedes £46

## THE NEW Mk III AMX MOUSE

Inc. Super Art package

**ONLY: £59** (carr £3)

(Please specify for BBC, Master or Compact)

- MOUSE MAT £3
- AMX MOUSE ONLY £29
- AMX SUPERART Package £34
- AMX STOP PRESS – A Desktop publishing software. Works with Keyboard, Joystick or a mouse £32
- PAGE-FONTS – Over 20 Fonts for use with AMX Pagemaker £13
- AMX DESIGN (ROM) £55
- AMX XAM Educational £15
- AMX EXTRA EXTRA £16
- AMX MAX A gem of desktop (ROM) £20

## WE Mouse House

Treat your mouse to a cosy Mouse House. This handy little gadget solves the problem of where to store your mouse when it is having a rest. Made of sturdy plastic, the WE Mouse House attaches to the side of your computer, monitor, disc drive or desk.

It protects it from damage when not in use, yet within easy reach when you need it again. There is also a second compartment for your pens and pencils – and at £4 it doesn't cost a rodent's ransom.

**Price £4**

Our Mark II Light Pen is the very latest in light pen technology. It is totally insensitive to local lighting conditions and works with many different monitors. The pen only responds to the High Frequency light produced by your monitor/TV. An LED indicates when valid video data is being produced. A conveniently located switch is also fitted. (Price includes FREE software Disc and Operating Manual)

**Only £21**

## FLEET STREET EDITOR

- Software pack for BBC Micro £33
- Software pack for the Master £39
- Admin Xtra Disc Utility £13
- Fonts N Graphics Disc Utility £13

## BEEB VIDEO DIGITISER

**"Test Bureau Approved for Use in Education"**

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro. This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket. The software supplied includes a sophisticated, fast screen dump routine.

Images produced can be compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem. The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

**£109 (Carr. £5)**

(BBC B+ and Master compatible, except Master with Econet)

(Price includes) Digitiser Unit, Software in ROM & a Comprehensive Manual)

## The Beeb HandScan

**Hand-held Scanner for the BBC Micro**

Watford Electronics are pleased to announce the launch of the first hand held scanner for the BBC Micro. HandScan is a compact unit which will allow photographs, diagrams, or any other documents to be digitised quickly and easily, to then be used in a desk top publishing package, art program, or even in your own Basic programs! These useful devices have been available for faster and more expensive micros for some time, but only now is Watford Electronics able to offer the BBC Micro computer.

The HandScan plugs directly into the 1MHz bus on the BBC while a comprehensive set of utilities provided by the sophisticated ROM firmware. The scanner has a resolution of either 100 DPI or 200 DPI when accuracy is essential. Pictures as wide as 4" may be scanned in mode 0 and various types of dithering may be selected to simulate the grey levels of a scanned picture.

All necessary software has been included in the firmware to allow the scanner to read images directly into our Wapping Editor with little more than the click of the mouse. The digitised picture may then be incorporated into your magazine, newsletter, report or any other document.

**Beeb HandScan & Firmware £135**

Winner of the BBC Acorn User 1990  
Award for the Best DTP/Word Processor

## The Wapping Editor

The Wapping Editor from Watford Electronics represents a breakthrough in Desktop Publishing for the Beeb. The package includes a 64K ROM containing ALL the software needed to get into print fast; a very sophisticated graphics module, professional quality typesetting software, a word processor, a comprehensive font editor for designing your own typefaces, and a variety of printer dumps. This mouse-driven system is designed for the BBC B, the B+ and Master computers and will take full advantage of any Sideways and Shadow RAM that may be fitted. It will run under DFS, ADFS and Network filing systems and requires as a minimum just a single 40 track drive.

Included with the system is a utility disc containing several high quality fonts, various utilities and a ROM image of a Support ROM. A comprehensive 100 page manual completes the package. The Support ROM contains routines to allow an area to be rotated to any angle or distorted to any four-sided shape. Also included are facilities to draw ellipses at any angle and sectors, segments and arcs (in Master or BBC B with Acorn GXR). Another of the features of the Support ROM is a 'Turbo DFS' which gives DFS access times comparable with those of ADFS.

## Page Layout Section

The Wapping Editor may be used to create pages of any size from an A6 to a full A3 page. If none of the eight default page types suit your purpose, the stand-alone page creation program may be used to create pages to your own requirements. By using proportionally spaced fonts and genuine microspacing it is possible to print over 150 characters across an A4 page. A unique feature of the Wapping Editor is the 'A5 x 2' page size allowing two A5 pages to be printed side by side onto a single A4 sheet.

The graphics module incorporates the facilities like: pencil, brush, airbrush, polygon, circle, ellipse, fill, cut & paste, etc.

Text may be typeset, either justified or unjustified, in any font anywhere on the page. Simply select which font and text document you wish to use, and pull out a rectangle on the page where you want the text to be – it's as simple as that! Multiple columns may be printed just as easily and a special 'expand' feature may be used to expand the microspacing so that the document exactly fits the space defined.

## Word-Processor

The integral word processor is the ideal tool for producing your text documents, although text can of course be read in from any of the other popular word processors such as View, Wordwise etc.

## The Font Editor

The font editor module will allow you to design your own typefaces or to modify the ones provided on the utility disc. This sophisticated editor has numerous functions designed to take the tedium and frustration out of producing good looking, well balanced fonts. Each character may be individually proportionally spaced and characters of any size up to 16 x 16 pixels may be defined.

Pictures may also be 'grabbed' from a video source by using the Watford BEEB Video Digitiser.

**Wapping Editor Software Pack** £69  
**Wapping Editor plus Mouse** £89

(Wapping Editor only works with Master Compact if a Mertec Expansion box is fitted)

**NEW**

At the request of many of our customers we are now able to offer training in the use of Wapping Editor DTP package. For further information please telephone 0923 37774 and ask for Tim or Shiraz

## Wapping Art Disc

Over 250K of clip art to cut and paste into your Wapping Editor pages. Pictures include maps, transport, people, media, sport, games etc. Two 'ratio' screens for use with hi-res and rotated A5 pages to ensure images are not distorted when printed out.

Music writing symbols in the form of pattern and brush for quick production of manuscripts are included together with staves.

There are two prepared hi-res pages layed out for printing labels, both single and double width. Ready made label designs are included but these can be easily replaced with your own designs.

A Mode 0 screen dump routine is also included. To pack such a large amount of data onto the discs the screens have been compressed and routines to compress and expand Mode 0 screens are included on both discs. Using the packing routine you can archive large numbers of screens onto a single disc.

£15

## Wapping Font Disc 1

Sixteen additional fonts, including smaller version of Oberon and Daisy and two new sizes of the standard font for the Wapping editor.

Also included are three Mode 0 screens containing giant 'headline' fonts to cut and paste to create extra smooth headlines.

Supplied complete with instructions.

£12

## Wapping Font Disc 2

This new addition to our Wapping range of DTP software provides you with additional 23 fonts for the Wapping Editor DTP pack. (80 track discs only).

£13

## Laser Direct

By using the power of the Archimedes RISC processor, it offers the best of both worlds – print speed up to 5 times faster than typical Laserjet compatibles – uses outline fonts so that any font can be scaled to any size – works with all programs that use RISC OS printer drivers. Ideal for use with Genesis, IDraw, Acorn DTP, Impression, etc. Includes 50 sheet paper tray and a single sheet/envelope tray. Requires one expansion slot and at least a 2Mbyte Archimedes. A very compact printer, a very low initial cost and very low running costs.

**Special Price: £849**

High Res Laser Direct Card for Canon LPB4 Laser Printer £325  
LPB4 Printer plus Card £1025

(For demonstration, call in at our retail shop)

**CREDIT CARD 24 HOUR  
Ansaphone Hot Lines  
(0923) 50234 or 33383**

**All prices are exclusive of  
VAT**

## Archi Mk II Hand Scanner

Watford Electronics is now able to offer a complete hand held scanning package, possibly the most essential addition to any desk top publishing system, for only £149. The package includes the most comprehensive utility software available for the Archimedes, a high quality hand held scanner, and all necessary documentation to get you going straight away.

## SCANNER

The scanner is capable of scanning up to an amazing 400 dots per inch (DPI)! The scanning area is 4" wide, and the height is only limited by the maximum amount of memory available. The dot resolution may be switched to 100, 200, 300 or the maximum 400 dpi. One of four operating modes may be selected offering either pure monochrome scanning, or one of three grey level modes. The grey level modes use different size dither patterns to represent up to 16 shades of grey. There is also a dial to allow the "brightness" to be adjusted over a wide range, in order to optimise the quality for any specific image. The scanner interface is a standard, single width, expansion card (module) which plugs into the Archimedes' backplane. The socket on the rear panel connects the scanner by 1.8 metres of cable.

## SCANNER SOFTWARE

Full use is made of the windowing and the multi-tasking facilities of RiscOS. The software is supplied in a 64Kbyte ROM located on the interface board. The scanner appears as a small icon on the desktop icon bar, and the software is retrieved from the ROM simply by clicking on that icon. As you scan a page, the image appears in the scanning window on the screen, scrolling up in real time. The other facilities included in the software are:

Cropping and scaling to any size including stretching and squashing in X and Y direction separately.

Colour tinting.  
X and Y flip.

Edge detection which turns solid objects into outlines.

Selective directional copying which allows features (i.e. lines or text) to be made thicker or thinner.

Scanned images may be saved as sprite files or transferred directly into other RiscOS applications (DTP, Draw, Paint) simply by dragging the sprite file into the application's window. Sprites may also be generated using anti-aliasing. This greatly improves picture quality and is particularly effective when scanning material with a range of grey tones, such as photographs. Images can be printed on any printer that is supported by a RiscOS printer driver, with optional settings for portrait or landscape modes, image scale and positioning. Images are printed using the full resolution of the printer and are not limited to the screen resolution.

On-screen help is provided via the RiscOS interactive help facility. Calls are also provided in the ROM for users wishing to write their own software, incorporating the use of the scanner.

**AHS-4 Archi 300/400 Version** £149  
**AHS-3 Archi A3000 Version** £175

**Continued → → → → → → → → →**

## STAFF VACANCIES

Watford Electronics is the leading supplier in the Acorn computer field and has established itself in the PC compatible market with its Aries PC computers. In its eighteen year history, Watford has always kept itself at the forefront of the new technology. Due to our latest expansion, we require staff to man our BBC/Archimedes and PC Technical Departments. Applicants will be required to be familiar with BBC/Archimedes hardware and software, and PC staff will need to be familiar with PC computer hardware. Good rates of pay, excellent prospects. Subsidised company accommodation is available to single persons if required. Telephone Keith Archer or Richard Overfield for interview, or write to us enclosing your CV.

## Solderless Sideways ROM Socket Board

The key features of this new, no fuss, easy to install quality product from BBC leaders Watford Electronics are as follows:

- Increase your BBCs capacity for ROMs from 4 to 16.
- No soldering required.
- Very low power consumption.
- Minimal space required.
- Compatible with Torch, DDFS, RAM Card, 2nd Processor, etc.
- Socket 14 takes two 6264 RAM chips.
- Read protect to make RAM "Vanish" allows recovery from ROM crashes.
- Battery backup option for RAM chips.
- Supplied ready to fit with comprehensive instructions.

**Price: Only £35**

Battery Backup fitted £39

Battery Backup only £3

16K Sideways RAM £8.50  
(carriage £3)

- Sideways RAM Utilities Disc for Solderless ROM Board. Includes the options to load and save ROM Images and the facility to use Sideways RAM as Printer Buffer.

**Only: £8**

## User Port Splitter Unit

Gone are the days when you had to plug and unplug devices from the User Port. This extremely useful little device allows two units to be connected to the User Port simultaneously, and select between them simply by toggling a switch. This device is particularly useful for those people using Quest Mouse and the Watford Video Digitiser or any similar combination

**Excellent Value at £22 (carr £2)**

## Sideways ROM ZIF Socket System

Allows you to change your ROMs quickly and efficiently, without opening the lid. The ZERO INSERTION FORCE (ZIF) socket is located into the ROM Cartridge's position.

- Very simple to install. NO SOLDERING required. The ZIF (Zero Insertion Force) socket eliminates the possibility of damage to your ROM pins when inserting & extracting.
- The low profile of the socket allows unrestricted access to the Keyboard.
- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.
- This versatile hardware solves the problem of running out of socket space. Simply lift the ROM from the ZIF & insert a different one (No pulling or pushing of Cartridges. It is a must for professionals and Hobbyists alike.)
- BBC, B and B+ compatible.

**ONLY £18 (carr £3)**

## BBC B Low Profile Cartridge System

Complete System consists of: Low profile ROM Cartridge, Socket housing, Cable assembly, 5 labels and a library storage rack for the BBC B.

- Complete System **£11**
- Spare Cartridges **£2.75**
- Spare Rack **£1.65**

## ROM Cartridges for the BBC Master

Will accept the new larger Piggy Back ROMs like: Interword, Interbase, Quest, Conquest, etc

**Twin £9; Quad £14**

## 16K Disc Ram Module

(16K Sideways RAM Module)

Complete with such features as read and write protection, these new modules from Watford Electronics are ideal for the hobbyist, software developer and ROM collector. Key points to note about this new addition to the Watford range of products are:

- Write protection (useful in a variety of circumstances)
- Compact construction
- No overheating or overloading problems.
- Free utilities disc supplied
- Can be used as a 16K PRINTER BUFFER.
- Ideal for professional software development.
- Supplied with utilities software disc.

**Only: £29 (carr £2)**

Optional Battery back-up fitted

**£3**

## ARIES CORNER

### B-32 Shadow RAM Card

Like the BBC B+, the B32 provides 20k of shadow screen RAM and 12k of sideways RAM. Unlike the B+, the B32 has simple software commands which allow the user to reconfigure the RAM as 16k of shadow RAM and 16k of sideways RAM, or all 32k as sideways RAM.

With the B32, the programmer gets up to 28k of RAM available for Basic, Logo, Cobal, Forth, Lisp and BCPL programs in any screen mode. The business user gets extra memory for View, ViewSheet, Wordwise Plus, Interword and many other applications. For advanced applications, the scientific user gets access to a massive 47k of data storage using the Acorn approved ★FX call.

Sideways RAM enables you to load sideways ROM images from disc, allowing you to have a large library of sideways ROMs (subject to the copyright holder's permission) stored on disc. The B32's sideways RAM can also be used to extend any operating system buffer (such as the printer buffer) or to load tape programs into a disc system.

The B32 simply plugs into the 6502 processor socket on your BBC micro - no flying leads to connect and no soldering. Provision of the onboard ROM socket means that the Aries-B32 control ROM does not use up one of your existing ROM sockets.

- Recommended by Computer Concepts for use with their Inter series of ROMs.

**Price: £69 (carr. £3)**

### Aries B-12 Sideways ROM Board

The B-12 provides a total of twelve sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS sideways ROM system. In addition, there are two sockets for sideways RAM, giving up to 16k of RAM using 6264 static RAM chips.

If you do not have a B32 or B20, a small adaptor module (the Aries-B12C) is available at a nominal cost

**Price: Aries B-12 £36  
Aries B-12C £5**

### Aries B-488 IEEE-488 Interface Unit

The Aries-B488 is an interface unit to enable the BBC micro to control and monitor IEEE-488 bus systems. The IEEE-488 bus (also known as the 'GPIB' or 'HP IB') is the standard method of interconnecting programmable laboratory instruments and control equipment. Using the B488, up to 15 devices may be connected in a single high-speed data network.

**£238 (Carr £3)**

### Voltmace Joysticks

**Delta 3B Single Joystick £10**  
**Delta 3B Twin Joysticks £15**  
**Delta 3C Joystick for Compact £10**  
**Delta 14B Single Joystick £11**  
**Delta 14B/1 Adaptor Module £12**  
**Transfer Software Disc-Tape £7**  
**Delta-Cat A mouse eliminator Joystick for the Archimedes £24**

### Delta Base B

Analogue aircraft style yoke Joystick to run in the analogue port of the BBC B & Master 128

**£25**

## ROM/RAM Card

Watford Electronics announced the first ever commercial ROM board for the BBC micro, the Watford Electronics 13 ROM Socket Board 7 years ago. Following the success of this board, we have designed what probably represents the ultimate in expansion boards, the new Watford Electronics ROM/RAM board. This highly versatile and sophisticated board represents the latest in "2nd generation" sideways ROM technology for the BBC micro, designed to satisfy the serious BBC user.

- NO SOLDERING required to fit the board.
- NO User Port corruption (avoids problems with the mouse, modems, Eprom Programmers, etc.)
- Fully buffered for peace of mind.
- Compatible with BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8.
- Up to 8 banks of sideways RAM (dynamic).
- Option for 16k of battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM (ALLEVIATES crashes during ROM development).
- Separate RAM write register (&FF30 to &FF3F).
- Automatic write to currently selected RAM socket for convenience.
- FREE utilities disc packed with software.
- Compatible with our DDFS board, 32k RAM Card, Delta Card, sideways ZIF, etc.
- Large printer buffer.
- UNIQUE fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
- ROM to RAM load and save facilities.

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD &7F for ROMSPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster.

The ROM-RAM Board plugs into the 6502 CPU socket. This leaves free all the existing ROM sockets, which can still be used normally.

Any ROM that can be plugged into the BBC micro's own ROM sockets may be used in the ROM-RAM Board.

The ROM-RAM Board is supplied with all ordered options fitted as standard. Upgrade kits (with full instructions) are available for all of the options, for later.

### PRICES:

- ROM/RAM card with 32k dynamic RAM **£48**
- ROM/RAM card with 64k dynamic RAM **£65**
- ROM/RAM card with a massive 128k dynamic RAM **£109**  
(carriage on ROM-RAM Card £3)

### OPTIONAL EXTRAS:

- 16k plug-in Static RAM kit **£9**
- 16k Dynamic RAM for Upgrade **£13**
- Battery backup **£3**
- Read and Write protect switches **£2 each**
- Complete ROM-RAM board
- All options installed **£115**

### P.S.

IS your existing ROM Board overflowing with ROMs? Do you need more Sideways RAM? Is your Board unreliable? Then upgrade to Watford, ROM/RAM Board and pay £5 less.

## 32K Shadow RAM/Printer Buffer Card Expansion Board

### A MUST FOR WORD PROCESSING

Don't throw away your BBC B for a BBC B Plus or BBC Master. Just plug the ribbon cable into the 6502 processor socket, and fit the compact board inside the computer. Immediately you will gain not 16k or even 20k, but a massive 32k of extra RAM!!!

• IMPROVE your WORD PROCESSING system, whether disc or cassette based. Don't wait for a slow printer – type in text while printing. TWO JOBS DONE SIMULTANEOUSLY and £100+ saved on a printer buffer.

• "VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28,000 bytes free – 5 times as much as normal.

• In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24k of text in memory. This product is recommended as an ideal complement by Computer Concepts.

• Combine GOOD GRAPHICS and LONG PROGRAMS. Use the top 20k of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs. Benefit from MODE 0/1/2 graphics and 28k of program space.

• Use the FULL 32k or the bottom 12k of the expansion RAM as a PRINTER buffer for PARALLEL or SERIAL printers, sound channels, RS432 etc. Print large text files while running long graphics programs, and have all your buffer options available as well (\*FX15,21,138, 145,ADVAL etc). Please note only a 12k printer buffer can be used with Wordwise or Wordwise-Plus, due to the way they are written.

• Unique facility to turn ROMs off and on again. Unlike all other ROM managers, this feature does not use 'unofficial' memory. Two bytes of normally user-inaccessible memory on the RAM card are used to ensure ROMs are disabled WHERE OTHER ROMS FAIL.

**Only £59** (carr £3)

(Price includes a comprehensive manual and the ROM)

## BBC SOFTWARE'S Popular Educational Software

- Maths with a Story 1 (Disc). 4 primary level maths programs **£11.25**
- Maths with a Story 2 (Disc). 4 further maths programs. **£11.25**
- Picture Craft (Disc) 6-14 age group. Pack consists of flexible geometrical design & colouring programs. **£17.00**
- ECOLOGY O-Level program. **£20.00**
- POLYMERS O-Level program. **£20.00**
- Classification & Periodic Table O-Level. The suite is supplied with its own database of chemical elements which can be classified according to your own rule. **£20.00**
- ADVANCED TELETXT SYSTEM **£8.65**
- PERIOD TABLE SOFTWARE **£20.00**
- Computers at Work – Primary **£17.35**
- Introducing Geography 11-17 years **£17.50**
- Electric Fields 6-14 years **£11.25**
- Espana Viva – 3 Discs **£19.95**
- WHITE KNIGHT Chess game **£16.00**
- A Vous La France **£29.00**

## More Educational Software

- **FUN SCHOOL 2 – Red:** Under 6 yrs – 8 programs on Discs, Shape Snap, Find the Mole, Teddy Count, Write a Letter, Colour Train, Pick a Letter, Spell a Word & Teddy Bears Picnic. **£12.00**
- **FUN SCHOOL 2 – Green:** 6-8 yrs – Eight programs on Disc, Number Train, Shopping, Maths Maze, Treasure Hunt, Bounce, Packing Caterpillar, 3 Number jump **£12.25**
- **FUN SCHOOL 2 – Blue:** Over 8 yrs – Eight programs on Disc, Build a Bridge, Passage of Guardians, Unicorn, Logic Doors, Souvenirs, Code Boxes, Mystery Machine & Escape. **£12.50**
- **FUN SCHOOL 3 – Red** **£19.95**
- **FUN SCHOOL 3 – Green** **£19.95**
- **FUN SCHOOL 3 – Blue** **£19.95**
- Six French Games – Aimed at pupils in their first year of French, but also useful as revision for more advanced students 11 years+ **£26**
- More French Games – Another 6 games 12 years+ **£26**
- Au Restaurant and Accident de Route 12 years+ **£26**
- Boulogne and Oh-Les – 2 programs for beginners **£26**
- Letters to French Penpals – 11 years+ **£26**
- French Programs with Henri Beret – The programs in this series present vocabulary, grammar and role-play phrases in the form of animated games. 11-16 **£22**
- Six German Games – Aimed at pupils in their first year, but useful as revision for more advanced student of German. 12 years+ **£22**
- More German Games – Aimed at pupils in their 2nd year of learning German. 12 years+ **£22**
- The Cloze Program – Using context clues to predict is much more than a gap filling exercise. All ages **£26**
- An Introduction to Electronics – Brings together all the basic electronics required for a GCSE Physics or CDT course. 14-16 years **£26**
- Computer Control – This is a package of 3 programs simulating control of a greenhouse, a robotic arm & a chemical plant. 14-16 years **£26**
- The Nuclear Reactor – An interactive, menu driven program for GCSE pupils. Demonstrates & explains nuclear fission & the chain reaction. 14-16 years **£22**
- PUNCMAN Learning punctuation  
Puncman 1 & 2 for 7 – 13 years **£15**  
Puncman 3 & 4 for 8 – 14 years **£15**  
Puncman 5 & 6 for 8 – 15 years **£15**
- Yes Chancellor – A chance to take over number 11 at Downing Street. 12 years+ **£18**
- Letters & Pictures – Introduces phonic skills to Infants 6-8 years **£15**
- Numbers & Pictures – Early number learning is a great fun (4-6 years) **£15**
- Note Invaders – Budding musicians can learn the notes on the Clef with this elegant game 3 programs (7 to Adults) **£15**
- Maps & landscapes No. 1 (9-14 years) **£18**
- Help Your Child learn Basic Map work No. 2 (9-14 years) **£18**
- Pirate – Educational Adventure (8-14 years) **£15**
- Spelling Week by Week (6-14 years) **£18**

## Archimedes Software

- BUMPER DISC **£14**
- Bumper Disc 2 **£14**
- Bookbinder **£43**
- Craftshop 2 **£29**
- DigiSim **£35**
- Gate Array Teaching System **£68**
- Fun School 2A Red (up to 6 years) **£14**
- Fun School 2A Green (6-8 years) **£14**
- Fun School 2A Blue **£14**
- Jigsaw **£28**
- Craftshop 1 **£28**
- Desktop Stories **£27**
- Droom **£17**
- Numerator **£60**

## Word-Aid

### The most comprehensive utilities ROM for Wordwise-Plus

Extend the power of your Wordwise Plus word processor with this most advanced ROM from Watford. By utilising the powerful Wordwise Plus programming language, WordAid provides a whole host of extra features, all accessed via a special new menu option. This ROM has been personally approved by Mr Charles Moir, the author of WORDWISE PLUS.

- Alphabetical sorting of names and addresses.
- Text transfer options.
- Chapter marker.
- Epson printer codes function key option.
- Search and display in preview mode.
- Embedded command removal.
- Print Multiple copies of a document.
- Multiple file options for print and preview.
- Address finder.
- Label printer.
- Mail-merger.
- Number/delete/renumber.
- Clear test-segment area.
- BBC B, B+ and Master compatible.

## VIEW PRINTER DRIVER ROM

View is a powerful word processor, but until now has seriously lacked in terms of printer support. With the launch of our Printer Driver ROM, which includes an extremely powerful and easy to use Printer Driver Generator, View users can find themselves in the realms of advanced word processing at only a small outlay.

The VPD extends View's printer command with a series of mnemonic commands. All standard highlight sequences are also supported. A large range of printers are supported by drivers contained within the ROM (the drivers can be downloaded and customised). Printers supported include: Epson's MX, RX, FX, LX, JX80 range, H180, KP810/910, PW1080, JP101, HR15, M1009, GLP, Panasonic KX-P1081/2, JUKI 6100, etc.

Other printers are readily supported by defining a Printer Driver using the built-in Printer Driver Generator. The features mentioned below are available to both the built in Printer Drivers and user defined drivers (assuming the printer supports the features).

NLQ control, Underline, Bold, Proportional Spacing, Microspacing, Italic, Superscript, Subscript, Condensed, Enlarged, Double Strike, Set lines per inch numerically (e.g. LPI 6), Set characters per inch numerically (e.g. CPI 5), Select printer font, Select printer ribbon colour, Translation sequences, Emulation of BBC Character Set, Simple numeric expressions for certain operations, Full printer setup, Send control codes, Print prompt on screen, Redefinable Pad character, Pause for key press, Prompt to change daisywheel, and Execute ★ command when printing.

Other features include a very powerful on-screen preview, with bold, italic, underline, super/subscript, enlarged highlights, and a special printer driver to allow memory-based text to be previewed by View 1.4. Of course, View 1.4, 2.1 and 3.0 are all supported, as is Shadow RAM and 6502 Second Processors. The BBC B series and Master series of micros are supported. A comprehensive manual is supplied. All in all, a very professional product for the discerning user who wants power at their finger tips.

Price: Only £33

## Copy Holder

Whether you want to type in your latest program or the draft of a new trilogy, Watford's manuscript holders are superb for holding your paper at the ideal height and angle to allow you to read and type in ease and comfort.

Available in 2 full A4 versions, desk resting and shelf clamping. Paper is held firmly by means of a plastic retaining ruler and a clip grip. (for resting books or magazines, the desk top version is recommended).

Desk Top £7 (carr. £3)

Angle poise £12 (carr. £3)

## OFFICE MASTER

**CASHBOOK** – A complete "Stand Alone" accounting software package for the cash based sole trader/partnership business. It is designed to replace your existing cashbook system and will provide you with a computerised system complete to trial balance.

**FINAL ACCOUNTS** – Will take data prepared by the Cashbook module and produce a complete set of accounts as following: Trial Balance with inbuilt rounding routine; Notes to the accounts; VAT Summary; Profit & Loss A/C; Balance Sheet.

**MAILIST** – A very versatile program. Enables you to keep records of names and addresses and then print, examine, sort and find them, all with special selection techniques.

**EASILEDGER** – A management aid software tool designed to run alongside an existing accounting system. Essentially a Debit/Credit ledger system which can handle sales, purchase and nominal ledger routines to provide instant management information.

**INVOICES & STATEMENTS** – Greatly reduces the time and cost of preparing Invoices and Statements by storing essential information like customer names, addresses and account numbers. Has VAT routines and footer messages facility.

**STOCK CONTROL** – Allows you to enter stock received, stock out, summary of stock items and current holdings together with details of total cost, total stock to minimum level, units in stock ordering, quantity and supplier detail.

All this for only £21 (Disc)

## OFFICE MATE

- DATABASE
- BEEBCALC SPREADSHEET
- BEEBLOT GRAPHICS

**DATABASE** – Set up a computerised card index system with powerful search facilities.

**SPREADSHEET** – Offers many calculation and editing features

**BEEBLOT** – Provides visual representation from Spreadsheet data.

OFFICE MATE Only £10 (Disc)

## ACORN TO PC

### Stop the Confusion!

Do you have to use both Acorn computers and PC's? Would you like to use your Archimedes or A3000 in PC-emulation mode but are unsure of the new commands?

Although Acorn machines (such as the BBC B, the Master, the Archimedes and the BBC A3000) are mainly used in education, most commercial computers use other operating systems, particularly MS-DOS. As a result school computer users are at a disadvantage when moving into 'business' computing. PCs and other commercial computers use MS-DOS as the operating system, so commands for formatting, copying, backing up, printing and the modem are not the same. Even file names are written differently! And did you know that there is one Acorn command which, if used in MS-DOS, wipes everything in the current directory? 'ACORN TO PC' enables you to change over painlessly. It shows clearly and quickly how, why and where the two systems (Acorn and MS-DOS) differ. As with a foreign language dictionary, you can use the book to transfer either way – from Acorn to MS-DOS, or from MS-DOS to Acorn.

'ACORN TO PC' also acts as a handy reference guide to all Acorn star commands and their MS-DOS equivalents. It also has an extensive and readable explanation of the directory tree and hierarchical filing systems in general. Both DFS and ADFS Acorn systems are covered. 'ACORN TO PC' is written clearly and concisely by Dr. John Lockley, who has wide experience of writing and broadcasting. He is currently appearing as a regular contributor on Radio 5, and is co-author of 'The Complete BBC Computer User Handbook'.

Price: £15.95

## The Complete BBC Computer User Handbook

"Why has no-one written a book like this before? It's long overdue".

If you own a BBC-B, BBC B+, Electron, Master 128, Master Compact or Archimedes then this book is for you. It shows you how to get the most from your computer, and how to make the computer work for you. Although some sections are machine specific, most of the information, programs, hints and good solid experience are for the whole range of BBC machines. The general style and level means that both beginner and expert will feel satisfied with the quality and quantity of the material.

**GENERAL** – Uses and abuses of computers.

**HARDWARE** – How to design your own work station. Hardware additions (disc drives, ROMs, printers, 2nd processors, etc). DIY alterations.

**HARDWARE RUNNING BBC-BASIC** – All BBC machines are described with their differences. Compatibility between the various BBC machines. Networks. The Archimedes and its advantages.

**GETTING ORGANISED** – So that you keep track of your programs and control of your software. Setting up for easier programming sessions.

**NEAT PROGRAMMING** – Good style. Writing structured programs. Getting the best from BBC-BASIC, Graphics and screen displays. Speeding up programs. Saving space.

**GENERAL PROGRAMMING TIPS AND HINTS** – with a multitude of examples (eg input vetting, dealing with dates, blanking out function key messages, error trapping, disabling ESCAPE and BREAK, use of EOR with colour, etc).

**DEBUGGING** – Specific errors and how to handle them. How to test programs fully.

**STANDARD PROGRAMS** – Assessing word-processors, spreadsheets, databases, graphics packages, communications etc. How to customise them to your own requirements.

**COMPUTERS AT HOME AND IN THE OFFICE** – Introducing the computer to the office. Program protection. Computers and the law. Communications. Selling your own programs. 28 FULL CHAPTERS, elegantly written and extensively indexed. To dip into, consult, or read from cover to cover, again... and again... and again...

Only: £14.95 (Book No VAT)

## Beeb PC (BASIC)

Beeb PC Basic is designed for program authors wishing to convert programs so that they will run on IBM personal computers. To convert BBC BASIC programs manually can waste days of valuable time with every occurrence of common statements such as PROC, DEFPROC, TAB, having to be changed. Beeb PC (BASIC) automates many of these changes, and will convert majority of BBC statements that are invalid for IBM BASIC into equivalent acceptable statements. In addition BBC BASIC data files can be converted to IBM BASIC format, with support provided for all BBC data formats:- INTEGER, REAL & STRING.

Price: £38

## Beeb DOS 3.0

(Now reads Archimedes Discs)

The BBC and IBM PC's are the most popular micros in the UK. The BBC is firmly established in the education sector and the IBM is the industry standard in the business world. The pools of information and applications held on these computers are immense, yet the means of passing information between them are very limited. Beeb DOS provides a practical method of transferring information between these two micros.

Beeb DOS is a collection of utilities which run on the PC's and enable it to read and write information on BBC discs. You can transfer files between your PC's 360K floppy, high density floppy or hard disc and your BBC discs. In addition Beeb DOS allows you to catalogue, format and compact BBC discs and delete, re-name, lock and unlock BBC files, all on PC's. Each Beeb DOS utility is written in IBM assembler and is run directly from PC or MS-DOS. The Beeb DOS utility can be run from floppy disc, hard disc or RAM drive.

Beeb DOS is supplied on an IBM 5.25", 360K disc complete with a comprehensive operating manual.

(Will only work on 360K Disk Drives)

Price: £39

(Please write in for technical literature)

## The Complete Mouse User Guide to BBC Micro

This manual has been written to reveal the secrets of the mouse. It explains all the principles required by the hardware and associated software, and also example listings for inclusion into custom programs. The manual first details the basic principles of the mouse and a simple program which uses these principles. This information should be adequate for most applications. However, it is possible to improve the performance of the mouse by expanding on the principles already used in the software. This is again fully explained and an example program given.

It is possible to gain a full understanding of the mouse from this manual. For those not interested in exactly how the mouse functions, complete example programs are also included. These may be typed directly into the micro, without the need for any understanding of the hardware or software involved, enabling the mouse to be used for custom applications.

Price £5.95 (No VAT)

Example programs on Disc £4.95

## Acorn Speech Synthesizer package complete, for the BBC B Microcomputer

**Special Offer £18**

### Watford Electronics are:

- Acorn Qualified Dealer & Econet Referral Centre
- ARIES PC Dealer/Distributor
- Cambridge Computer Dealer
- Epson Silver Centre
- EIZO Monitor Dealer
- Microvitec Appointed Dealer
- NEC Appointed Dealer
- Panasonic Premier Dealer
- Roland Plotter Official Dealer
- Star Printer Sub Distributor
- Taxan Appointed Monitor Dealer
- 3M Media Premier Distributor

### ADDER

The only low cost EPROM Programmer for the BBC Micro that will program both the standard 21V and the new 12V5, 27128 EPROMs.

The Adder unit connects to the User Port and draws its power from there too. The EPROM is mounted in a top quality ZIF socket. There are no switches or controls as Adder is entirely software controlled.

The Adder software provides sophisticated facilities for programming EPROMs from a RAM image produced by loading disc files. The software is menu driven and designed for ease of use.

#### Features:

- Two ultra fast programming algorithms or standard slow algorithm.
- Supports standard 21V programming and newer 12.5 volt EPROMs. (Software switched).
- The RAM image to be programmed can be built up in many ways. Sections of image can be loaded separately. Part programming. Read EPROM. Edit data in memory.
- Automatic processing to handle a list of files to program into the EPROM.
- Automatic disc buffering to allow programming of 32K 27256 devices from a 32K file without extra effort.
- Verification gives detailed error list and checksums are maintained. There is also a blank check facility.
- Works with all standard filing systems. Generates header code for RFS ROMs to allow Basic programs etc. to be stored in EPROM. More than one file per ROM permitted.
- Programs the following EPROMs: 2516, 2716, 2532, 2732, 2764, 27128, & 27256.

**£65 (£5 Carr)**

### TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** - Standard version erases up to 16 chips. **£32 (carr £3)**
- **ERASER GT** - Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£34 (carr £3)**
- Spare UV tubes. **£12**

## Watch this space for our forthcoming new products for the Archimedes Micro

### Servisol Foam Cleaner

This king size multipurpose foam cleaner spray is ideal for cleaning Keyboard, Monitor, Disc Drive & Computer furniture surfaces.

**£2.50**

### Antistatic Aerosol Spray

Ideal for cleaning and preventing static build-up on TV/Monitor Screens.

**£2.50**

### Aerosol Dust Spray

Ideal for removing dust & dirt from Keyboard & similar inaccessible spaces.

**£3**

### Spares for BBC Micro

Master Keyboard	£62	Keyboard	£46
Master Casing	£49	Power Supply	£59
Replacement Flexible 17 way Keyboard Connector			<b>£4</b>

### Surge Protector Plug

Fitted in place of your normal mains plug, this device protects your equipment (and data from corruption), against mains high voltage transient spikes/surges caused by lightening or thermostats switching.

Protection for only **£8.50**

### 4 Way Mains Distribution Socket

4 way top quality mains trailing sockets. Supplied wired up with mains plug ready for use. Can be screwed to floor or wall if required. Very useful for tidying up all the mains leads from your peripherals.

**£9.50**

### Aries Spike Cleaner Unit

A 4 way mains distribution unit as above with a built-in Surge Arrester, providing protection for your complete Computer/Hi-Fi System

**£13.50**

### ROM Extraction Tool

This extremely useful tool allows you trouble free chip insertion and removal from your computer by distributing the removal force over the whole body of any 24 or 28 pin chip.

**£2**

Metal Chip Extractor

**£3**

### 28pin DIL Header Plug

SOLDER type **£1.50** IDC CRIMP type **£1.95**

### 8 Way DIP Switch

Increase the speed of your Disc Drives by soldering this switch to your BBC B or B+ keyboard

**Only £1.00**

28 pin ZIF SOCKET (Textool)

**£6.95**

### Connecting Leads

(All ready made and tested)

## ARIES PC 386-SX

The Aries PC 386-SX combines many of the powerful features of the 386 system with the frugality of a price tag more at home on a 286 system. With 8/16MHz CPU, this system provides virtually full 386 performance, including the more convenient scheme of memory control that allows easy configuration of expansion RAM as EMS for DOS application.

### Features:

- 80386-SX CPU with optional 80287/80387 Maths Co-Processor
- 8/16 MHz selectable speed
- Legal Bios with built-in Setup routine
- OS/2 and XENIX compatible

### Specifications:

- 1MB RAM on-Board expandable to 16Meg
- 1 x 5.25" - 1.2Meg Drive fitted
- 1 x 3.5" - 1.44Meg Drive fitted
- 40Meg 28mS Hard Disc Drive fitted (1:1 Interlaced)
- HDD/FDD Controller Card
- 102 Key Keyboard
- Case with Keylock
- Eight expansion slots
- Two Serial and One Parallel Ports
- Logitech mouse
- 12 months On-Site maintenance
- £300 worth of Software, (MS DOS 3.30, GW BASIC 3.21, Digital Research's GEM, Finesse 1.1 DTP pack, Multiwriter Wordprocessor & Spellchecker, PC Organiser), **FREE** with every micro.

## New Low prices:

- **System 1** - Specification as above plus a 14" High Resolution Flat Screen mono monitor **£1098**
- **System 2** - As system 1 plus a 14" High Resolution Flat Screen EGA Monitor and Card **£1268**
- **System 3** - As system 1 plus a 14" High Resolution Flat Screen VGA Monitor and Card **£1399**
- **System 4** - As system 3 (VGA) with 80MB 28mS fast Hard Disc Drive fitted **£1544**
- **System 5** - As system 3 (VGA) with 155MB 16mS super fast Hard Disc Drive fitted **£1899**

## PC External Disc Drives

(for IBM PC, Amstrad 1640 & Compatibles. Supplied complete with case, cables and power supply. Ready to plug)

PCS-3L5	3.5" - 720K Cased Drive	£85
PCS-3H5	3.5" - 1M44 Cased Drive	£95
PCS-5L2	5.25" - 360K Cased Drive	£86
PCS-5H2	5.25" - 1M2 Cased Drive	£99

Our December 1990 catalogue now available.

## Aries Note Book PC

*Full Desktop PC Power  
For People On The Move*

Imagine an IBM PC compatible laptop that can fit inside your briefcase (with room left over), so light (just over 7 pounds) that it is easy to carry wherever you go, and a choice between AC and rechargeable battery power, so you could use it any-where. The Aries portable has made your dream a reality with the world's most powerful compact Laptop.

The Aries portable has an energy-efficient 80C88 micro-processor that runs at 10MHz, a built-in high-capacity high speed, 20MB Hard disk drive, 1MB RAM, an advance LCD display, and a standard full-size keyboard with comfortable tactile feedback. The Aries Notebook also has a full complement of six built-in ports (two RS232, one printer, one external FDD, one RGB monitor), so you can add on extras wherever you settle down. All of this in a case so compact that it can easily fit inside your briefcase.

In his independent review (Computer Shopper, May 1990), the reviewer writes, - "Overall, the single most outstanding feature has to be the price tag. A notebook PC, with a hard disc selling for below £1,000 has no competition at the moment. If you have a small briefcase, weak arms or just like the concept of a truly portable computer then this is your man".

### Just read the specification . . .

- **Processor:** 80C86 running at 10MHz Real time clock/calendar
- **Memory:** 1MB RAM (640K, 384KbLIM/EMS)
- **Drive:** Built-in 2.5" 20MB Hard Disk Access Speed 28ms (optional external 3.5" or 5.25" floppy disc drive)
- **Display:** EL backlit transfective supertwist LCD display, 80 characters x 25 lines, 640 x 200 bit-mapped graphics IBM CGA compatible
- **Std Interface** Parallel Printer Port. Two RS232C Serial Ports External disk drive port. CGA Colour monitor port External keyboard port
- **Std. Accessories:** AC mains adaptor/batt. charger. Battery pack

## Panafax UF121/122

Panasonic's Panafax UF121 puts the power and convenience of fax within the reach of everyone who needs to send correspondence quickly and reliably.

### Features:

- Automatic Document Feeder accepts up to 5 pages (UF122 version only) feed is available on the UF -120.
- CCITT G3/G2 Compatible
- Photocopier facility
- Built-in slimline telephone
- Automatic reception
- Auto/Manual redial
- Individual Transmission Journal
- Header Print
- Multi-purpose LCD Display
- Polling (reception only)
- Voice control function
- Lightweight (approx. 5Kgs)
- Baudrate 9600
- Superfine mode & Halftone
- 10 Station Auto dial & redial

**UF121 £395; UF122 £429**

(Price includes 12 months on-site maintenance)  
Spare Fax Paper Roll £4

## Fax-Line Splitter

The Watford Fax-Line fax Splitter doubles the utility of any phone line by automatically detecting and routing incoming fax to the fax machine, otherwise it routes the call to the telephone after a very brief message. Calls can even be directed to an answering machine. Standard BT connections provide simple plug-in-and-go operation. Fax-Line saves you hundreds of pounds in BT rental. **BABT approved.**

**Launch Price: Only £59**

(For a live 24 hour demo of Watford Fax-Line, please phone 0923 22 22 21)

with every computer  
we sell...

...our expertise!

If you are buying a new Archimedes or Master Series computer, you don't expect to know all about it from day one. That's where we come in. We don't leave our customers high and dry with their problems — they know they can rely on us to get them out of trouble.

Whether it's hardware or software,  
we're the people who know.

ACORN IS A REGISTERED TRADEMARK OF ACORN COMPUTERS LTD.

**£10 FILE SEARCH**

The first program for this month comes from **Andrew Pepperell**, and it assembles to make a machine code program called FSEARCH which will search a file for a particular byte, and report all occurrences. The full syntax is:

**FSEARCH <fname> <byte>**

Upon typing this, all occurrences will be listed (see below), and the number of occurrences reported, in decimal. This can be changed to hexadecimal by simply deleting the SED and CLD instructions from the source code. The second parameter, <byte> can be expressed in one of three ways. Firstly, as a decimal number just using the digits 0-9, secondly as a hexadecimal number preceded by an ampersand sign, or finally as the Ascii code of a character, preceded by quotation marks. For example, the following are all valid:

```
*FSEARCH Prog 98 *FSEARCH
File &D *FSEARCH Text "r"
(the closing " is not
obligatory).
```

The way the matches are displayed is dependent on the load address of the file. This is first read in, and incremented every time a byte is read from the file. If a match is found, this address is printed. This shows which bytes would contain a particular value if the file were \*LOADed into memory, so if a machine code program was tested, which loaded at &900, then the address reported would be an offset from &900 not 0.

The program works by first determining the filename from the syntax, and placing a carriage return after it. Then, the start of <byte> is found, and the relevant routine is called to interpret it and to place a numerical value into searchbyte. Then, the file's load address is read, and stored. This value is then incremented every time a byte is read from the file.

A comparison is made every time a byte is read as well, and if the two bytes match, the value

# EIGHT BITS

originating from the load address is printed, and the number of occurrences is incremented.

When the end of the file is reached (carry set from OSBGET), the number of occurrences is printed.

**£10 SCREEN BLANKING**

I wrote a screen blanking program myself which was published in the magazine about a

year ago, but **Simon Young** of Fareham has produced a vastly improved version which is listed here. He has also provided a witty and amusing description of how the programs work. I will let Simon continue...

Programming a computer is a curious pastime, and is not without its hazards for both you and your machine. While programming it is frequently necessary to leave the computer to its own devices for a while. It is

at these times that your mental health is perhaps most at risk: How many times have you returned to your seat before the hallowed beast the next day, only to find that it has been switched off, your program or result lost, and your sanity with it? But who has committed this vile crime? Given the wild reaction it tends to provoke, it is perhaps hardly surprising that nobody has turned it off for you and one is left with the deduction that either the cat has demonstrated extreme dexterity or LGM (little green men) have been at work.

For your computer, however, damage is done to the monitor by being left on. The problem, which is more notable with monochrome monitors, is caused by leaving a display unchanged for extended periods of time.

This leads to the 'burning' of a faint but permanent shadow of the display into the phosphor of the monitor.

Such burn-in may be observed in its worst form in computer laboratories where it is not uncommon for a computer to be turned on at the start of the day and left with the power-up display until 5pm when everybody goes home.

The simplest answer to both problems would be to turn off the monitor when you intend to leave the computer unattended. This, however, is not really the best of solutions. In the first place, computers undertaking tasks are prone to attract the LGM by the strange beeping noises which they emit.

Secondly, and perhaps more importantly, monitors are high voltage devices. Consequently, when they are turned on or off they can cause voltage spikes in the mains supply which may lead to the corruption of any installed disc or, rarely, to the crashing of your computer. Either event may have disastrous consequences.

A screen blank utility is thus the obvious solution to both problems. I have written two programs, one which is Ram

## HINTS & TIPS

based and one which conveniently operates from Rom.

Both programs make use of two of the pre-packaged interrupt routines (events) provided by the BBC micro. Each time a key is pressed, an event is generated. This event (event number 2) is trapped and used to enable the sound and VDU output, and to set the interval timer to an appropriate interval: I have chosen 15 seconds, but you may prefer longer.

When the interval timer crosses zero (ie, if after 15 seconds no key is pressed) another event (event number 5) is generated. This too is trapped, and is used to turn off the sound and VDU output.

Turning on and off the sound output is a simple task performed by OSBYTE&D2 (\*FX210), but clearing the screen display is rather more difficult. There are several ways of going about

blanking the display, but the most direct is to make use of the 6845 cathode ray controller chip (CRTC). This chip, which is the heart of the BBC micro's video output circuitry, must be able to blank both the display and the cursor for the delay caused if the SAA5050 character generator is used (meaning, when in mode 7).

You may therefore blank the display by writing directly to it and cursor blanking delay bits of the interlace and delay register (R8) of the CRTC.

However, when you do this you must be careful not to alter other bits of this register, because this will cause strange VDU effects and may even damage the monitor. So you must differentiate between mode seven and other screen modes when blanking and reinstating the VDU display.

This is done by checking the

contents of address &355, which contains the number of the current screen mode.

The Ram based version of the screen blanker fulfills these requirements in the most basic form so that the assembled program is just under one page in length. Provided your machine is not cassette based, or part of a network, the assembled code can therefore be installed at &900 (without overwriting any of the memory reserved for stack use) and will therefore not reduce program workspace.

If you should require to turn off the Ram based screen blank program for example to make use of the user events for another purpose, this is best done by the following commands:

```
*FX 247,0 *FX 13,5 *FX 13,2
```

The Rom based screen blank program is a more complicated program, although in essence it

is the same. This should run on a BBC Master with sideways Ram, or a BBC with a sideways Ram bank. In either case the user zero page workspace area, (&70 to &8F) is preserved, so that other programs which make use of this area of memory should not crash. When run the program assembles to &4000 and this should be saved using the command:

```
*SAVE fname 4000 4311
```

and then loaded into the chosen bank of sideways Ram, ie for Master users:

```
*SRLOAD fname 8000 <rom-bank> Q
```

If you have a Watford Electronics Rom/Ram expansion board (as I do) then you may assemble the code directly into a chosen bank by altering the following lines of the Rom based program:

```
320 ?(&FF30+R)=0 330 FOR  
IC=0 TO 3 STEP 3 350 :  
4500 ?&FF38=0
```

## contex

Archimedes is a trademark of Acorn Computers Ltd.

### BANK MANAGER for disc systems only

The most advanced and versatile personal bank account management program available for all BBC computers. Consistently acclaimed!

"data entry is a delight... professional... excellent product" - Micro User April '86  
Enter cheques and receipts. Standing orders any frequency. Automatic date sequencing. Reconcile statements. Search, amend and delete. Unreconcile. Move forwards or backwards. Analyse expenditure. Forward cash flow forecast. Up to 36 simultaneous 'bank accounts' online, inter-account transfers. 9999 standing orders. 99 analysis categories. 12 actual and 12 budgets per category, over 4,000 postings on an 80tk disc. Reports to screen or printer. Graphics. Foreign currency support. Password. File recovery. Auto exec file. Field editing. Itemised look ahead. Programmable report writer.

Standard Bank Manager for the BBC B, B+ £17.50

### BANK MANAGER MASTER for disc systems only

Includes all of the facilities of the Standard Bank Manager plus ADFS file system support, shadow screens, uses sideways RAM, 40 or 80 column screen reports, improved graphics, m/c windows, function key support and onscreen labels, additional functions added to the already extensive report facilities.

Bank Manager Master for the MASTER and MASTER COMPACT £22.50

### ARCHIMEDES BANK MANAGER

All facilities of Master version plus high speed 'native' mode, wild card analysis enquiry, analysis code sort and other enhancements.

"Impressed, ideal, easy to use" - Micro User, March '88

ARCHIMEDES AND A3000 BANK MANAGER £25.00

### BANK MANAGER BUSINESS UTILITIES for disc systems only

For the 'professional' who also uses the BANK MANAGER to control the business accounts the BUSINESS UTILITIES add double entry trial balance and programmable spreadsheet analysis reports. Generated from cheque and cash transactions keyed into BANK MANAGER. Just pass the reports to your accountant! Available for all Bank Manager versions, state which.  
Bank Manager Business Utility Pack 1 £12.00

### TYPING TUTOR

Quickly learn to touch type. Over 90 smoothly graded lessons graduate you from the basic home keys to complete keyboard mastery. Unique word scan line checking. Target WPM and percentage correct. You may revise the targets or lessons as required. Audio key click for positive key depression. Establish a typing rhythm using the automatic metronome. Free format option. Disc version includes several enhancements eg. on screen keyboard, exact mode, on screen parameters. Recommended.

Cassette £12.50, Disc for BBC B, B+, MASTER and COMPACT £12.50  
FOR ARCHIMEDES and A3000 £15.00

ALL PRICES FULLY INCLUSIVE FREE POSTAGE WITHIN UK.  
Enquiries and Credit Card orders telephone 0234 838347

Please state: cassette, 3 1/2" disc, 5 1/4" 40tk disc, or 5 1/4" 80tk disc and computer type (B, Compact, Master or Archimedes).

where <R> is the hexadecimal number of the Ram bank to be programmed.

The Rom based program may, of course, be loaded into any bank of sideways Ram that is present. It responds to the commands (non-case specific):

**\*BLANKON \*BLANKOFF**

which are reported in the normal way when a \*HELP enquiry is made of the Rom (which calls itself "BLANK"). When the command \*BLANKON is made the Blank Rom installs its vectors which point event numbers 2 and 5 to routines within the Rom and enables these events which then perform in exactly the same manner as the Ram based version. On the command \*BLANKOFF, event numbers 2 and 5 are merely disabled.

If loaded into a bank of sideways Ram that has a higher priority than any filing systems which are present then the Blank

Rom also responds to a break. In this case the Rom declares its presence in the power-up message, installs its vectors and enables event numbers 2 and 5. If you wish to have the Rom state its presence in this fashion, but do not wish the screen blank to be active on power-up then the following amendment to the program should be made:

**1250 JMP pull**

More usefully, you may customise your own version of the Blank Rom to set up your computer the way you like it on power-up.

For example, you may wish to select a different screen mode, or issue set-up instructions to your printer or even, with care, issue commands to other programmed Roms.

If you wish to change the time delay between key press and screen blanking this may be done by calculating the *time-*

*togo* data (lines 1590 to 1630 inclusive in the Ram based program or lines 4060 to 4100 inclusive of the Rom based program) as follows: The *timetogo* data is a five byte number (low byte first) generated by the algorithm:

**&FFFFFFF - (S \* &64)**

where S is the number of seconds (in hexadecimal) required between the last keypress and the screen blanking: For example 1 minute would give a result of:

**&FFFFFFE890**

so that the *timetogo* data would be:

**EQUB &90 EQUB &E8 EQUB  
&FF EQUB &FF EQUB &FF**

## £10 BASIC PROTECTOR

Here is another interesting program from **Andrew Pepperell**. As the name suggests, this program generates a machine code

called PROTECT, which provides a means of protecting Basic program listings. The required syntax is:

**PROTECT (<line>)**

The parameter is optional, and if included will signify where the protection will start (or more accurately the line before the first line to be protected). If omitted, the protection starts from the first program line. After the program has been used, typing the Basic command LIST will only list those lines up to (<line>).

One thing to note is that (<line>) (or the first program line) should be either a REM statement or a colon. This is because the utility works by placing a VDU 21 code at the end of the line, and some commands will take this to be part of their syntax, and errors will be produced. Similar measures need to be taken at the end of the program,

## HINTS & TIPS

```

10 REM Basic program protection
20 REM by Andrew Pepperell
30 REM for B/B+/M/C/E
40 REM (c) BAU Feb 91
50 :
60 PROCassemble
70 PROCchecksum
80 PROCsavecode
90 END
100 :
110 PROCchecksum
130 FOR M%=start TO P%-1
140 I%=I%+?M%
150 NEXT
160 IF I%=47414 ENDPROC
170 VDU 7 180  for in Code."

```

although ENDPROC, END and STOP seem to be unaffected.

The program works by first deciding if (<line>) was used in the syntax. If no parameter was passed, the start address is deemed to be PAGE+1, and then the protection routine proper is

called. If <line> was specified, the decimal number is read in, and the address of the corresponding line is found. This is then passed to the protection routine. The protection routine works by first taking a section of memory from the end of the first line

to the end of the program (TOP), and displacing it by one byte. Then, the stored length of the first line is incremented, and a 21 code and a carriage return are inserted into the end of the line (the relocation was necessary to provide a space for the &D byte). A VDU 6 code is then added to the end of the program (to re-enable the VDU), along with an &D and an &FF. The TOP variable (&12 and &13) is then increased by 2, and then the routine exits.

The main use for the program is to allow small parts of the program (or small programs) to be hidden away from the listing. For this, it would be necessary to ensure the relevant lines are at the end of the listing before running PROTECT.

A possible refinement would be to add a second parameter to specify where the protection would end (as it is, the end of

the program is assumed). Combining PROTECT with the BASMOVE routine listed in last month's Eight Bits would really be necessary to make the program work best, as the Basic Rom takes quite a while to run through all the hidden lines while LISTing a program, and so it is best to only hide small parts of a program.

If this is done, the user could be quite unaware that there is anything there at all. As the protection routine is quite simple to 'crack', then it is important to try and keep the user unaware that something is amiss!

## Quality Products for the BBC Micro

### PRINTER SWITCH-BOXES

These high quality 3 and 4 way printer switch boxes are ideal for use in schools and colleges. The switch is extremely cost-effective. It will allow up to four computers to share just one printer by simply pressing a button. All versions come complete with cables. The PS4/7 boxes have 2 x 3.7m + 2 x 1.7m + 0.4m to the printer, the PS3/6 have same but only 1 x 3.7m. Data buffers are fitted to the extra long 3.7m cables to give reliable data transfer.

These useful switch boxes are ideal for use in the office or at school. No need to keep swapping cables over just press the button! The cables supplied are 2 x 1.7m + 0.4m with appropriate connectors fitted. Both version may be used with a plotter if required. Super value.

PS1 2 BBCs to 1 Printer ... £31.50  
PS2 1 BBC to 2 Printers ... £31.50

### 32K RAM MODULE

Store all your ROMs on disc then load them into the RAM module as and when required. Plugs into just one sideways ROM slot giving two separate 16K banks. Complete with write switch software on 40 or 80 track disc plus full documentation.

RM2 32K RAM module ..... £25.95

This quality switch box is designed for the Archimedes / A3000 range of computers and IBM PC compatibles. The ribbon cables supplied are 2 x 1.5m + 0.4m to the printer. The unit can also be used with a parallel plotter.

PS5 2 Archimedes to 1 Printer ..... £34.50

Stop Press enthusiast **Tim Riches** of Worcester.

1. When drawing any shapes, strictly observe the scale along the sides and they won't appear squashed when you print them out.

2. For interesting results use a letter background. Load your required font, click the 'Graphics' icon, click the 'Patterns' window, and then the 'Select' window. Press 'Move' and select the letter you want. Select the 'Paint/Spray' window, and watch the results!

3. Print out your entire collection of fonts and all your clip art on separate pieces of paper, and put them in a ring-bound folder, marked with the fonts names, and clip art filenames. If you have a lot, you should also make a note of which disc they are on. This will save you a lot of time hunting through discs, cataloguing and test load-

ing fonts and clip art to find the right style or picture.

4. When on the main screen area, you will find that you can click the 'Quick Click' window at any time without the need to 'Cancel' what you are doing. After you have selected what you want, a single press of the 'Cancel' button will take you straight back to your work.

5. Instead of copying a certain area to somewhere new, and then wiping the old, it is easier to select the 'More Goodies' window from the 'Goodies' menu, and then click the 'Shadow' window on. This changes the 'Copy' window in the 'Paste' menu to 'Move', thus allowing areas to be moved instead of copied.

6. If you have a double disc drive, then while using your Page discs in drive 0/1, you can use your System disc without constant disc swapping. Select

the 'Goodies' icon, and then click the '\*Command' window from the menu. Enter 'DRIVE 1' (the \* is also printed for you). You will now find, especially when printing out, then the page is loaded from side 0/1, and the printer codes from the System disc in drive 1. Hence, no more disc swapping.

## YOUR CONTRIBUTION

We welcome contributions of 300-1500 words, with or without program listings, on topics of interest to eight-bit BBC/ Electron users. Particularly welcome are items on applications, ie for users, not programmers, although interesting graphics programs, which as you know are a specialty of *BAU*, are also sought.

Topics for which we would like to receive more submissions are the programming of power-

ful printers, hints and tips on the popular databases and spreadsheets, networking, and hints on best use of the wide range of hardware 'add-ons', (except sideways Ram boards) such as the products produced by companies like Watford Electronics, Morley Electronics, and so on.

Of less interest are programs which just enhance the operating system, or provide features which are already found on commercial utility Roms.

Please send your contribution with both the text and any listing on the disc, and on paper as well. Please ensure there is sufficient documentation (at least 300 words), and that the listing is in the standard *BAU* format (one statement per line, lower case variables etc.), and send it to David Atherton, Eight Bits, *BBC Acorn User*, 20-26 Brunswick Place, London N1 6DJ.

## 42M Archimedes Removable Drives – £585

*If you are looking for a hard drive for your Archimedes or A3000, why not consider using a MicroNet MR45 removable SCSI hard drive ?...*

- **Fast** – The average access time is 25 milliseconds, so these are FAST devices. When used with an Oak SCSI card, the file transfer rate is the same as a conventional fixed hard disc.
- **Reliable** – The technology of these drives has been proven by use in huge quantities with Apple Macintosh computers.
- **Robust** – The discs, when not in the drive, are extremely robust. We (deliberately!) threw one half-way across the office, it hit a desk and knocked a phone on the floor! We then verified the disc and found that it did not have a single error on it!
- **Flexible** – The medium is removable, so you can use different discs for different uses.
- **Secure** – The medium is removable, so you can take out the disc and lock it up in a safe place.
- **Cheap** – The price of the drive, including a single 42M disc, is just £585 (£680 including VAT and carriage). Extra 42M discs are £80 each (including VAT & carriage).

*N.B. These are special prices for Archive Magazine subscribers only (ring for details) but it's worth paying £17 to join Archive just to buy one of these drives!*

## MAD ABOUT CAD

**C**omputer aided design (CAD) has moved down some interesting avenues during the past 10 years. Third angle projections of engineering components are no longer the sole use for computer graphics. CAD is now used hand in hand with CAR (computer aided realisation). This field turns 3D geometry, essentially cartesian mathematics, into what initially looks like pretty pictures!

CAR produces stills or animation, portraying an object or scene so accurately, that sometimes it's almost 'photorealistic'. It provides a customer with a realistic picture or sprite of a product that might not even exist yet. Architects can light buildings that have never left the disc drive. Advertisers can send Smarties flying around classrooms and film directors can explode planets. The 'clothing' of a simple wireframe object with textures, reflections, refractions and shadows is called 'rendering'.

The Arc offers great possibilities for design. **CLIVE GRINGRAS** and **RICHARD BROWNING** offer two different views of the packages available

However, high quality rendering is not enough to produce realism. Unfortunately, the famous adage, 'garbage in, garbage out' applies to computer graphics. No matter how accurate or photorealistic the renderer, a weak image will always appear unrealistic if the design is not sufficiently detailed. In this respect the design system of a CAD package is just as important as the rendering system.

Not surprisingly, the Archimedes is being exploited for its speed and graphics capabilities and CAD/CAR packages are relatively inexpensive. If you are interested in CAD/CAR and are attempting to decide between the Archimedes and other computers, hardware comparisons can be

argued till superconductors work at room temperature! However, an indisputable fact concerning Archimedes CAD packages – and in fact most 'professional' Archimedes packages – is that they are far less expensive than their PC and Macintosh counterparts. For anyone interested in buying a complete CAD system, with no reason for PC compatibility, the Archimedes should be a very serious consideration.

Two of the major contenders in the Archimedes CAD/CAR world are Ace Computing and Clares Micro Supplies. Clares has followed *RenderBender* with *Illusionist*, a sophisticated smooth shader. Ace Computing has added *ArcLight*, a

multi-tasking raytracer, to the existing *Euclid* and *Mogul*. Both companies have now taken the wise step of making their CAD packages totally Risc OS compatible. This ensures that, within the Archimedes environment, most users will experience little difficulty coping with the user interface.

However, the packages are fundamentally different. *Euclid* is a design system with a fair rendering capability. This rendering, as illustrated, is facetular shading. Each side, or facet, is not blended into the next facet, resulting in a 'crystal-cut' appearance. Certain objects, such as buildings, can benefit from this rendering.

Euclid's single-window design area

generally very impressive, but it can exceed certain user requirements.

Both systems use a very friendly, simplified CAD design main screen. Both also have manuals aimed at the non-CAD user, so the documentation is littered with examples and useful tips. Unfortunately, users of professional CAD packages will be disappointed. Both packages are adequate for school and home use, but neither allows sufficient detail and precision in designing. The packages also fall down by not allowing any CAD data to be used from other PC CAD packages, or data to be output to any other professional package. The rendering of *Illusionist* is generally better value for time.

For the first-time CAD user, designing in either package will not come easily. Having to think in three separate dimensions can be a shock to most brains. *Euclid* uses an interesting one window design viewport as opposed to the accepted three projections (plan, front, and side) that *Illusionist* and professional CAD packages use. This one window system aids object design initially and will generally be more than adequate for most objects. As the complexity of the objects and scene increases, designing can be rather cumbersome and non-precise. *Illusionist*, by using the three viewport system provides an easier way of placing and orientating objects accurately. Both of the systems are driven by either a menu system or by a set of somewhat indecipherable icons.

The basic CAD tools are present in both packages. Sweeps are used to produce a circular shape. A simple line swept around a mid-point can form a cylinder. A circle swept around its middle will model a sphere. *Euclid* allows far more accuracy in this operation and a greater control over how the sweep will appear when rendered. Within *Illusionist*, a small window opens to reveal a grid on which the sweep profile is drawn. Even the addition of a numbering system on the grid would have improved the accuracy which can be attained. However, without co-ordinates, the rubber band outline drawn is very arbitrary, therefore swept objects that require reasonable detail can be impossible

to draw. This is a pity, as the simplest feature in CAD should be the sweep, but the frustration in sweeping within *Illusionist* tends to indicate otherwise. As well as the extrusion facility that both packages have, *Euclid* boasts a sheet option, a simplified parametric modeller. This is where a curve between two lines can be created. Sheets are useful and interestingly, in professional markets are rare, expensive and sought after. The most readily available example of a 'sheet' is a horse saddle. Within most CAD packages, and certainly within *Illusionist*, a saddle would be extremely difficult, if not impossible to design. It has been suggested that a saddle could be created within as few as four steps within *Euclid*. Teapots are within your grasp in minutes rather than hours!

Ace Computing's *Mogul* allows a *Euclid* design to be animated easily. This animated film can contain movements of any of the objects and rotations around any axis. This motion is achieved by specifying points which the object must pass through. The spectacular and complex films that can be produced could lead onlookers into assuming that they are difficult to make. On the contrary, for all but the most elaborate animations, the *Projector* program can cope with the display and *Mogul* with the design. Sprites can be used as backdrops and the film is automatically compressed to decrease its final size. While *Illusionist* offers no animation facilities, it still serves a vital purpose in CAR. All the pictures in this feature are motionless – in fact most CAD work ends up as still shots. The need to animate is a personal choice and there are packages purely for the animation of sprites. Aesthetically, it is great to be able to have *Euclid* designs spinning around in windows on the desktop, but in reality this has few commercial uses.

At the end of the day, the final image is what matters and neither package will disappoint. However, image quality is fundamentally subjective. Bearing this in mind, I consider that the raytracing by *Arclight* is not of a quality high enough to justify the time spent waiting for the final rendering. Raytracing has become an over-

A Euclid scene rendered by Arclight

Others, such as spheres, tend to look unrealistic unless a vast number of facets are used. In general, the more facets, the slower the rendering and the larger the image data. Ace Computing's new release, *Arclight*, improves the final image by allowing comparatively fast raytracing of existing *Euclid* designs. *Arclight* and *Euclid* are separate programs, although the method of data transfer is so easy they can be considered as a whole (such is the pleasure of Risc OS!).

*Illusionist* works in conjunction with its renderer, a very realistic smooth shader. It portrays shadows, highlights and even texture maps, but the method used is not raytracing. Raytracing is a very complex and time-consuming process. The result is

used computer buzzword and an over-used process. It is incredibly computer intensive, and unless the algorithms for dithering (colour mixing to approximate more colours than the computer has) are particularly advanced, or the computer uses an expanded colour board (allowing more colours from the computer), the results can be very coarse. Smooth shading (as with *Illusionist*) will always appear impressive on the computer. It is alleged that smooth shaders 'know their limitations' and therefore do not stretch the capabilities of the computer beyond what will look acceptable. True, only *Arclight* can compute reflections and refractions, but these are not the sole ingredient for a photorealistic image. In raytracing, the design must be far more detailed, as imperfections appear particularly noticeable in raytraced images.

Clares has been looking to the future in its rendering. The package can output 24-bit RGB data, graphics jargon for 16.7 million colours, instead of 256 on the Archimedes. At some stage in the future, a 24-bit colour board will be able to display at this staggering quality on an Archimedes. Currently, 24-bit is considered to be the threshold at which an image will have such perfection in colour that it will be totally indistinguishable from the real object. When a cheap 24-bit colour board becomes available for the Archimedes, *Illusionist* will become a truly powerful package with very few price contenders in the other computer markets. *Arclight* has no such facilities, but no doubt Tony Cheal at Ace Computing would consider

adding the ability for 24-bit data output should a board be available.

On a less serious side, hobbyists will enjoy using both packages: they are easy to use, and documentation is more than adequate. The design environment is friendly but perhaps a little too iconated in both. For the user who fundamentally wants a quick, well rendered image of their CAD work and is not interested in animations or high quality raytracing, *Illusionist* must be a wise buy. For those who are interested in CAD as a means of producing animations or drawfiles and perhaps dabbling in some time-consuming raytracing, *Euclid* and the animation package, *Mogul*, will more than fulfil needs. However, it should be noted that even the larger computer graphic houses try to avoid raytracing when possible.

*Euclid* does have the major advantage of being totally integrated within the Archimedes world. *Mogul* films can be used in *Genesis*; *Euclid* pictures can be saved as drawfiles and the objects can be created partially within *!Draw*. *Arclight* is totally multi-tasking. In this respect, schools should certainly look at *Euclid* and its related packages as a kernel for CAD work. The Risc OS interface in both packages is commendable, and certainly will help to break down any initial barriers between users and CAD.

Clive Gringras

### Solidcad

I reviewed *SolidCad* in *BAU* two years ago, in its pre-Risc OS incarnation. The user interface remains mainly non-Risc OS, although the design is compliant with the industry-standard interfaces present on PC CAD packages, like *Generic CADD* and *AutoCad*.

A Risc OS front end has been added to version 4 (a *SolidCad* icon resides on the icon bar) even though all editing has to be effected within *SolidCad*'s own environment, which consists of the traditional four-window elevation projections (plan, side, front, 3D) covering most of the screen, with menus presented on the far right. The multiple views can be in either first- or third-angle format and any projec-

**Illusionist took under five minutes to render this cup**

tion window can be enlarged, covering the other three, simply by clicking the right mouse button in the required elevation. The editing features in *SolidCad* v4 remain on the sparser side. All objects have to be constructed using either facets or outlines; facets are used to construct polygons of any shape and outlines provide the Sweep and Extrude tools with profiles of shapes.

### Objects and editing

Sweep can take an outline and rotate it around either the x,y or z axis. This enables the creation of objects like toruses and cylinders, or even spheres if you have the patience to draw the outline.

Extrude lets the designer 'stretch' an outline along any axis, so another way of constructing a cylinder would be to outline a circle then Extrude that. The objects that Sweep and Extrude leave behind are all constructed of facets. The coarseness of the object depends on how many facets there are in any given 'segment', which can be pre-defined (for example, if I wanted a half torus with a high resolution, I would type: SWEEP 1,180, then outline the square profile of the object. The sweep

**Sweeping out objects in Illusionist**

# Wild Vision

## THE ARCHIMEDES AND A3000 EXPANSION CARD SPECIALISTS

Wild Vision is the leading company specialising in the design and manufacture of expansion cards for the Archimedes and A3000. The Company has special expertise in the field of video, and many of the cards act as interfaces between computers and video for various applications. A custom design and manufacturing service is offered for specialist applications.

Due to expansion, Wild Vision has recently moved to a new hi-tech factory unit. Design and manufacture is now undertaken in ideal surroundings to the highest professional standards of quality. Wild Vision products are designed to comply with all Acorn's specifications for expansion cards and RISC-OS software.

### NEW

#### A3000 Expansion Box

Enables Archimedes expansion cards to be used with the A3000.

- holds 3 standard cards or 2 full width cards
- connects directly into A3000 expansion bus
- provided with 12v power supply
- sturdy steel construction
- multilayer backplane for maximum reliability
- fits neatly to rear of A3000, and compatible with Acorn A3000 monitor stand

A3000 Expansion Box ..... **£139.00**

### NEW

#### PAL Coders

Converts the RGB from a computer to a high quality PAL-coded composite video. Unlike lower cost units, these provide very stable output with correct sync for optimum results even with VHS recorders.

- record the computer output on video
- UHF, PAL and RGB outputs
- connect multiple monitors to a computer
- free standing unit

Chroma 135 - RGB input with 1 PAL and 1 UHF outputs ..... **£129.00**

Chroma 150 - RGB input with 2 PAL, 2 RGB and 1 UHF outputs ..... **£185.00**

### Chroma-Genlock Series

An easy to use way of adding captions, titles and special effects to video. Any graphics generated by the computer can be superimposed in full colour on video. Supplied complete with software to generate video captions.

Chroma-Genlock for A3000 ..... **£215.00**

Chroma-Genlock for Archimedes ..... **£215.00**

### The High Performance Chroma Series

A range of Genlock and video overlay cards. The cards with Genlock and video overlay have enhanced colour performance for use with professional video equipment.

Chroma 220 Genlock only (no overlay) for A3000 ..... **£195.00**

Chroma 320 Genlock only (no overlay) for Archimedes ..... **£195.00**

Chroma 250 Genlock and overlay (enhanced) for A3000 ..... **£395.00**

Chroma 340 Genlock and overlay (enhanced) for B, B+ and Master ..... **£395.00**

Chroma 345 Genlock and overlay (enhanced) for Archimedes ..... **£395.00**

### Video software

Chromatext - Video titling package (supplied free with Chroma-Genlock series) ..... **£39.95**

!ChangeFSI - Image processing and file conversion software ..... **£22.00**

XAT Video Utilities Package - A useful range of RISC-OS compatible video utilities ..... **£79.00**

### Hawk V9 Real Time Colour Digitiser

The best selling fully RISC-OS desktop-compatible colour digitiser. Captures single frames from video camera or recorder. "Live" digitised image on desktop acts as a view finder. Powerful image-enhancing software produces high quality full colour sprites that are easily dragged into other applications such as DTP and Art Packages.

Hawk V9 for the Archimedes ..... **£339.00**

Hawk V9 for the A3000 (including Wild Vision A3000 Expansion Box) ..... **£399.00**

### Hawk V10 and V12 frame stores

These capture, store and display video images in real time. They convert the Archimedes into a highly efficient image processing and analysis system, with better performance than comparable and considerably more expensive systems based on other computers.

Hawk V10, 4 frames each 256 x 256 by 256 grey levels ..... **£795.00**

Hawk V12, 4 frames each 512 x 512 by 256 grey levels and 4 binary overlay planes for each frame ..... **£1990.00**

The comprehensive Foster Findlay image processing and analysis software is available for the Hawk V10 and V12. This includes Arclmage, a desktop controlled package, and C\_Images - a library of image processing routines in C. Full details upon request.

### ADC1208 high speed analogue to digital converter

Convert analogue signals to digital format so that data can be stored and processed by the Archimedes. Sampling rate up to 166000 per second, 12 bit resolution, 8 input channels and digital I/O port.

ADC1208 Analogue to digital converter ..... **£495.00**

ADC1208 Software utilities module ..... **£50.00**

Please contact us for further information, full descriptive data sheets on all these and other products and detailed price list.

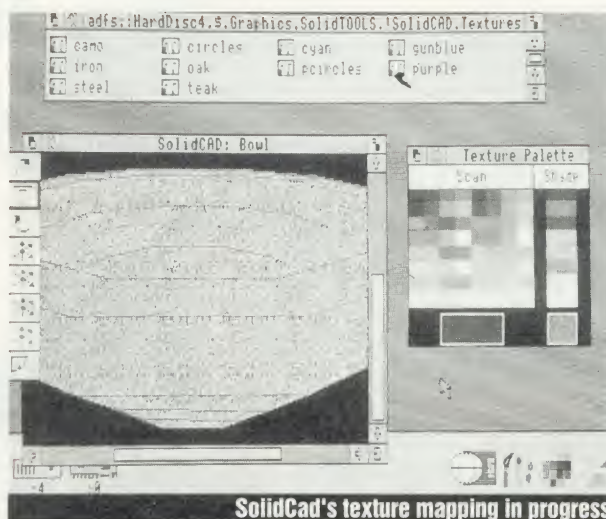

Products available from Wild Vision or good Acorn Dealers.

VAT @ 15% and delivery charges excluded from above prices. Delivery charges in UK are £5 per unit for all expansion cards and £2 per unit for all software.

command essentially means construct a new 'segment' every one degree throughout the entire 180 degrees the sweep will cover.)

There are no bezier curves within *SolidCad* and no primitives like spheres, cubes, etc. These omissions are certainly not minor and do limit the usefulness of the software as finer detail means greater memory consumption, and thus slower update/redraw times. As to changing the design once finished, a limited number of tools are at your disposal. These include selecting a vertex of a facet and moving it, selecting an entire facet and moving or changing that, or selecting an entire region of the design and altering that.

Facets, or polygons, do have their advantages. *SolidCad* can render your design in a variety of ways, from simple wireframe to smooth shading. The smooth shading uses a Phong/Gouraud-derived technique which is algorithmically based on polygons.

*SolidCad* images are generated internally to a high resolution, and an option is given to make use of this capacity and generate images to a greater quality than simply 'shading'.

*SolidCad* can also render the facets of objects in different ways, depending on which facets are given priority for display.

### Texture mapping

Apart from the new Risc OS front-end and faster drawing/update times (instead of the old Basic/assembler mix, it's now C/assembler) the software now has a major new feature: texture mapping. A 'wooden' floor no longer needs to look like it's been constructed from linear shades of brown, but a 'real' wood finish can be applied.

The illustration on this page shows a bowl I designed, using *SolidCad* to apply a 'stone' texture to it. The application of textures is simply done and is the only thing that benefits from the Risc OS front-end (indeed, it cannot be done within *SolidCad*'s own environment). Combined with light source shading (up to 26 different light sources), texture mapping results in great images without having to resort to raytracing. The future for *SolidCad* is as a

conceptual design tool. Even though it lacks in some areas, it is a fully-fledged CAD package which means that it will be able to have its output (your designs) analysed by volumetric and stress analysers for example.

Volumetric analysis enables the designer to see exactly how much space will be consumed; stress analysis shows the physical weak and strong points of the design (mostly as colour-coded contours). Silicon Vision is co-operating with the producers of *LinCad* (a 2D draughting program) so that elevations can be shared between the programs. As a result of early collaboration, a release is imminent.

Additionally, *!Draw*-format files can be utilised, further enhancing the appeal of the software.

The manual supplied is very good; examples and brief questions are used throughout. For the professional user, *SolidCad* v4 is a good – and future-proof – choice.

### SolidsRender

Especially with texture-mapping, *SolidCad*'s output is easier to relate to the real world. But for the ultimate in realism, nothing can beat raytracing. So, Silicon Vision has extended its range of design tools by releasing *SolidsRender*, a raytracer now included in the *SolidTools* range.

Raytracing is a technique used to generate images which portray 3D designs as realistically as possible – for example, mirrors that really reflect, or water that really refracts.

As the name implies, these images are obtained by following the paths of light, specifically those that enter the eye through pixels on the screen. The computer has to calculate which objects are struck by the ray, taking into account their material properties (how much they shine, let light through or reflect light, their colours, sizes and shapes) to decide which, if any, direction the ray then follows.

Water, for example, both reflects and refracts light, so for one ray striking the water at least two are generated.

*SolidsRender* is intended as a photorealistic image platform for *SolidCad*.

To this end, it has only one primitive – a sphere – with the design of a scene placed firmly in *SolidCad*'s court. *FilmMaker* paths can also be imported, allowing the generation of animated scenes automatically. *SolidsRender* gives the user a huge range of material property specifiers, selected within an environment similar to *SolidCad*. The four windows are present along with the menus on the right. At the bottom of the screen is the 256-colour palette shown as tiny rectangular blocks, which could be bigger to ease selection. Also displayed at the bottom is a Help message, relevant to whichever menu item the pointer is currently indicating. This is a nice feature, sadly absent from *SolidCad*.

### Material specification

All objects within the program can have their specular (shiny), diffuse (matt) and ambient (original object) colours specified separately. So you could have a turquoise ball which emits a pink matt contribution, but green highlight spots. Additionally, these colours can be added to the object's original (*SolidCad*) colour, which itself can be scaled for specular, ambient and diffuse contributions.

Objects can be made reflective, transparent and shiny according to the appropriate coefficients. The specularity (shininess) of an object can be changed from pinpoint highlights to broad spread highlights. The object can be totally reflective (when its reflective coefficient equals 1) or transparent.

The amount of refraction the object gives (the refractive index determines how much light bends on entering the object) can be altered, from 1 for air to 1.3 for crystal, to anything that takes your fancy. As if this weren't enough, the program lets you specify exactly how transparent an object is, and whether the red, green or blue components of the light change during the process.

For example, an object could have white light going in but only yellow light coming out.

As *SolidCad* texture maps, so does *SolidsRender*, only far better. *SolidsRender* can take any sprite (as long as your

# The Weather Reporter

The Weather Reporter is a fully automatic weather station which continuously records wind speed, wind direction, temperature, hours of sunshine, hours of daylight and rainfall. It is accurate, easy to install, robust, vandal-proof and needs no maintenance.

The Weather Reporter does not need to be permanently connected to a computer. It will record the weather unattended even through weekends and school holidays. The data collected can then be downloaded and investigated using a simple serial lead and the supplied user-friendly software available for BBC, Nimbus or Archimedes/BBC A3000. It can also be exported for use with *Oriel*, *Quest*, *Grass* or *Key*. The complete Weather Reporter package, hardware and software, costs only £295 (exc. VAT).

# ARCLASER

The ARCLASER represents a price/performance breakthrough – Printer (including drum and toner kit), cable, interface and software for £899 + carriage and VAT.

Find out more about this amazingly versatile printer:  
write or phone for your ARCLASER information pack...

The best value in direct  
drive page printers at just  
**£899**

- Compatible with all Archimedes applications, including FirstWord+
- High speed data interface – an A4 page is transferred in 6 seconds
- Prints outline font text at any size and half-tone graphics at full 300dpi resolution
- Feature packed printer driver and Epson emulation
- Can be used as an Eiconet printer server, with BBCs, Masters or Archimedes
- Compact, quiet and reliable
- Ultra fast – 5 to 15 times faster than conventional laser printers!

Arclight room design: rendered in 35 minutes

machine has enough memory) and map it onto any object – with perspective taken into account, sprites can be treated in an alternative manner. Rather than simply 'painting' a surface with a sprite, *SolidsRender* provides the user with the ability to apply different material properties to the object.

Depending on whether the bitmap is on or off at the intersected point, an object can present two properties (known to *SolidsRender* as layers 1 and 2). An object could then block light or let it pass according to the design of the bitmap. Any of the specifiers detailed above can be changed in each layer, leading to extremely complex designs. Texture bitmaps and sprites can also be scaled in two dimensions.

Obviously, to see the scene, you need a viewpoint. *SolidsRender*, as in *SolidCad*, allows the user to place a camera at any position within the scene, pointing in any direction.

The zoom level can be changed, as well as the x,y and z scaling of the 3D projection of the scene.

## Lighting

*SolidsRender* can detect up to 26 light sources, and each can have its own colour, radiosity (how penetrating, or bright, the light is with distance), and a cut-off point (below a certain 'brightness' the ray will no longer be traced). Any of the lights can follow an imported *FilmMaker* path, enhancing the animation prospects for the software.

I'll say something here about colour and the Archimedes. When the Arc was launched, much was made of its ability to display 256 colours at any one time from a palette of 4096. However, a restriction exists on how those 256 can access the full palette (the 256 is essentially 64 colours at four brightness levels).

Modern graphics workstations have the ability to display 24 bits' worth of colour (eight bits per red, green and blue component – almost up to real visual standard) or 32 bits (real life isn't more real!). That's up to 43,000 million colours.

In anticipation of similar graphics technology appearing for the Arc (for example

podule-based graphics co-processor), Silicon Vision's colour routines within *SolidsRender* calculate to 192 bits, or 64 bits for each RGB component.

Then, using a very impressive colour mixing and dithering algorithm, this is reduced to the Arc's 256-colour palette. Apparently, that colour algorithm alone took several months to perfect.

## Special effects

*SolidsRender* provides excellent control over the output of the final image. The program can be told not to bother following the reflections from objects with that capability. Similarly texture-mapping can be disabled as with the tracing of transparent objects. Shadows can either be computed or left untraced. To enhance the image still further, a supersampling option is provided.

Supersampling is a method which involves rendering the image at a greater resolution than the display. This image is then averaged out thus: the pixel to be finally displayed is compared with its immediate neighbours in the higher-resolution image; it's then 'averaged' according to the values those adjacent pixels possess.

This technique greatly reduces an effect called 'mach-banding', the bane of many renderers – two adjacent shades of (mostly) the same colour play a visual trick, in that the eye seems to think the shades darken towards the join. It's also known as 'pillaring'. If you visualise a Roman column look, you'll get a better idea.

A 'telephoto' effect can also be applied, by specifying the angle of vision both horizontally and vertically. As ray-tracing is naturally recursive, a depth variable exists to limit the extent of recursion in the renderer. The overall radiosity of the image can be altered too (letting you change the brightness of the image).

And, finally, the image can be rendered in sizes from one to eight doubling through to the entire screen. The completed image can be saved in either the internal high-resolution 'RGB' format or a standard sprite file. If the former option is

taken, a separate option, Process, has been supplied which effects the superb colour mixing and error-diffusion algorithms on the RGB files.

This option can take specifiers allowing, for example, the generation of a grey-scale image or the use of different error diffusion techniques. Output can either be another RGB file or a sprite file. (The option is the same as the one used within *SolidCad*)

*SolidsRender* is not a program for the casual user; it's an extension of the *SolidTools* range and as such is intended for the professional CAD market. Unfortunately, as it relies on *SolidCad* as its primary scene description tool, I can't say that the only limit is your imagination, as *SolidCad* is the limiter here; designs are constructed entirely from polygons and a complex scene could involve drawing thousands of the things.

To describe a scene for use with *SolidsRender* with *SolidCad*, each object must be described and saved separately, as *SolidsRender* imports and treats each *SolidCad* design as just one object. With ray tracing being inherently slow, such designs can take a very long time to render. For example, one very simple design took me six hours!

However, Silicon Vision promises faster algorithms in the 'near future' as well as the possibility of bezier curve implementation, so things aren't too bad. At the moment, however, *SolidsRender* still gives some incredible images considering the machine display limitations.

The manual is reasonable, although it would benefit from the inclusion of some examples.

## Conclusion

I am happy to say that I'm not caught in any quandary here; each suite of programs is aimed at distinct, and separate, markets. *SolidCad* and the stupendous *SolidsRender* come cheap to complete a professional system in the form of *SolidTools*.

And the wonderful *Euclid* with *Arclight* is unsurpassed for the home/hobbyist user. I'd certainly be happy to use either of them.

# DRAAT THE HATS

**BRYAN B CLOUD** takes us further into the world of the Pygmoids in the game that could save their lives

I have some good news and some bad news. The bad news is that things aren't looking good for the Pygmoids; the Hyperspatial Anti-matter Tachyons are still threatening to tear the very fabric of space into tatters and take the world of Pygmion with them. More Hats are appearing as I speak and I've just heard that Hats have been detected in three more regions – the sooner you can master control of the Self Propelled, Rebounding, Indestructible, Nullifying Gyroscope the better!

The good news is that a team of scientists at the Pygchester Institute for Scientific Studies have been researching the Hats as they appear and have found that they emit a very subtle and unique form of radiation. It is this radiation that causes them to become unstable and implode. Unfortunately no method of regulating these emissions has yet been discovered, but the scientists have developed the 'Computerised Location Update Equipment' – a unit capable of detecting and indicating the location of the nearest radioactive source. The 'Clue' has been installed in the 'Spring' and gives you some idea of which way to go to find the nearest Hat.

The only problems with the Clue at the moment is that it needs someone to operate it (this means it only functions when the Spring is stationary) and it takes a while to locate the Hats. The actual time is proportional to the amount of time left before the Hats implode. The same team of scientists has also found that when a Hat is nullified the radiation level drops quite dramatically, giving you some extra time to play with – let's hope it's enough!

## Typing in the game

I have some more good news and some more bad news. The bad news is that there

you'll need to type in eight listings, seven of machine code and one with 140 lines of data. The good news is you can buy the monthly disc which contains the fully working game ready for you to play.

If you want to type the game in, then carefully enter all eight listings (Hat0 to Hat6 and Create) and save them. The game assembles in sections and a (fairly) cunning system is used to transfer the variables between them. My thanks go to Chris Ruseman for showing me how to do this! The 'Create' program must be run first as this creates six datafiles that are subsequently 'imported' into the game as it assembles. While running, 'Create' keeps you informed of what file it is creating and how many bytes it has left to save. If you have made any errors in typing in the data, the program will inform you of the offending line. Make sure you type in the program exactly line for line and don't renumber it, otherwise it will get the line number wrong!

Once the six files have been saved, you can run 'Hat0'. This sets up all the variables for the game and then automatically chains the rest of the 'Hat' programs which assemble the actual game. The final program, 'Hat6' performs various checksums on the code and if it is all correct saves the final game as *HatTrix*. And

that's all there is to it. Wouldn't you rather buy the monthly disc?

## Playing the game

However you get hold of the game, it can be run simply by typing \**HatTrix*. This will display the highscore table and invite you to press SPACE to start the game. The principle of the game is unchanged since last

month's demo – use Z and X to move the Spring left and right. The longer the keys are held down, the higher the Spring will jump. The level number, screen number (1-4) and number of Hats to collect is shown at the start of each screen. You have a limited time (shown graphically as a bar at the bottom of the screen) in which to nullify the Hats randomly scattered throughout the four playing areas. Hats are nullified simply by crashing into them: you'll get five points for doing this and some extra time. After nullifying the last Hat on a level and coming to rest, any time left is added to your score as a bonus.

The output from the Clue (see above) is shown as a simple arrow in the bottom left-hand corner of the screen. You'll be able to hear it scanning for Hats and point in the rough direction of the nearest one when it has found one. The display changes to a diamond when the Spring is preparing to jump, as none of the Pygmoid crew can be spared to operate it! Remember that the more time you have left, the longer the Clue will take to find the Hats.

As the amount of time left falls, the radiation from the Hats increases to such a point that the containment fields placed around them become unstable and flash rapidly. Just before the Hats implode they disappear completely. If you don't nullify a Hat almost instantly and reduce the radiation level, all the Hats will implode, the Pygmoids, Pygmion and Pygmingham University will be obliterated from existence. You'll be informed of this fate by the most evil Pygmoid curse being placed on you and those accursed words 'Game Over' appearing. But don't forget it's only a game, so you can always press SPACE for another go!

In addition to Z and X, you can pause and unpaue the game with COPY and DELETE, switch the sound on and off with S and Q and more importantly scroll the screen around the Spring with the cursor keys. Oh yes, CTRL-ESCAPE will quit the game and return you to the highscore table.

One final point, after four levels you'll get a bonus level. This is simply a practice round with a set time limit of two minutes in which to get as many Hats as you can. You'll get 20 points for each Hat, but no extra time, and as it is only a practice level, you don't die when you run out of time.

I think that's all you need to know to play the game. The rest of this article is all about the changes since the demo version

and how some of the more interesting bits of the code work, so don't feel obliged to read it now. In two months time, I'll finish off with the screen designer and some ideas on how to write your own games.

Many new features have appeared in *HatTrix* since last month's demo version. To make it a real game, levels of increasing difficulty were added. Each level has four screens, bonus levels occurring every five screens.

The number of Hats to collect begins at four and increases by one each screen. The number of Hats displayed at any one time is eight for the first screen of a level, seven for the second and so on. The time you have at the start of a screen begins at 60 and goes down by five per level to a minimum of 30. The amount of extra time given after collecting a Hat starts at 30 and decreases by two per level to a minimum of 18. Additionally, extra time goes down by two per Hat collected on a screen to a minimum of 14. Incidentally, one unit of time is a little longer than a second. The routine `.nextlevel` in *Hat2* deals with all these parameters. In bonus levels, the number of Hats to collect is 255 with eight shown on the screen, initial time of 120 and no extra time per Hat collected.

A high score table has been added, but because mode 2 is only 20 characters wide, a special 6x8 pixel character set is used for names, scores and messages. These are plotted by `.putc` in *Hat5*. These are stored in compacted form and shown in the chosen colour using a mask stored in `icol`.

Some platform types are bouncier than others. Figure 1 illustrates this, with the blue 'ice blocks' being the trickiest to land on. You'll also notice that the platforms have been redesigned since the demo version. I found the original designs a bit too 'loud' to work in chunky mode 2!

*HatTrix* relies much upon fast screen scrolling. So called 'hardware' scrolling is used - altering registers in the display chip to enable the screen to be moved left, right, up or down instantly. Having shifted the screen, the new edge revealed has to be redrawn as quickly as possible. The routines responsible (`.redrawbottomedge`, etc) are found in *Hat3*. Where possible, the code is in 'expanded' form for speed. That is, rather than have a loop to put eight bytes of sprite on the screen, eight identical sets of instructions are used so that branches needn't

be made. When the spring is falling rapidly, up to 512 bytes of screen memory need to be updated each fiftieth of a second, so speed is essential. As a rule, vertical scrolling has priority over horizontal scrolling. However, additional scrolling is provided in 'emergencies'. In such cases, the Spring is close to both the side and the top or bottom of the screen and scrolling occurs in both directions to cure the problem. The machine isn't fast enough to do this very smoothly, but it only happens rarely.

Because the screen is hardware scrolled, the time bar and score need to be displayed every frame. So these routines are also optimised for speed. The score is actually plotted elsewhere and block-copied onto the screen each frame. Routines to show the time bar have been 'expanded' like those to redraw the edges for maximum speed.

With so much going on, it is important that things are done in the right order. An \*FX 19 is issued to wait for the computer to start displaying a frame. After this, you know that the electron beam in the monitor is at the top left corner and you have to move rapidly to get everything done in the next fiftieth of a second. Scrolling routines are divided into pairs. For each direction there is a routine to change the start-of-screen address and another to redraw the appropriate edge. The

first routine is called immediately after the \*FX 19. Next, if necessary, the old spring image is blanked out. When the spring is standing or crouching ready to jump, it isn't necessary to blank the old image and this provides valuable extra microseconds to draw the power meter and clue.

Next the spring is shown in its new position. Because this is the focal point of the game, it is important that it flickers less than anything else. Hence, blanking and replotting must be as close together as possible. Then the newly revealed area of screen is plotted and finally the time bar and score are shown. These are at the bottom of the screen, so can be displayed last.

One further refinement of code was needed to make scrolling upwards prettier. Because the spring is shown before any

new piece of scenery, when the spring jumped beyond the top of the screen 'junk' appeared briefly on the exposed top line (usually another copy of the time bar). To cure this, the screen is actually 33 character lines high. You never see the top line unless scrolling vertically when it appears momentarily. This is possible because the screen has been 'shrunk' horizontally and so there is spare screen memory hidden away.

Remember to look out for the *HatTrix* screen designer in a couple of months. In the meantime, happy hat-collecting...

Hope springs eternal in the Pygmoid breast...

# THE NEXT STEP

Continuing our step-by-step series on using the A3000, **DAVE FUTCHER** explains how to back up discs and files, and how to set up discs to store your own data

It is best to avoid using the application discs or program discs that you were supplied with when you purchased your A3000, or any others that you buy afterwards. You should make copies of them and then store the originals away safely. This is called making a back-up.

To buy your discs pop down to your local dealer or order them from one of our advertisers. You will need 3.5-inch double sided/double density (DD/DD) discs. Buy at least 20 and, if you like, format them all to save you time later on.

Data is stored on a disc by magnetising small areas, just like a music tape. Although this method is reliable under normal circumstances, you may accidentally leave the disc on top of something which is magnetic itself, like a television or loudspeaker. This may erase part or all of the disc, rendering it unusable.

Backing up is done onto a blank formatted disc. The A3000 calls the original disc the *source disc* and the blank formatted disc you are going to make a backup on to the *destination disc*.

Move the pointer to the disc drive icon and click the Menu button. Now move up to the Backup menu item and click on select. A window will open with the message: 'Are you sure (Y/N)'.

You have to type Y or click the Select button. A further message appears prompt-

ing you to 'write protect' the source disc.

All discs have a small tab in the bottom corner. This tab tells the computer whether or not the disc can be written to. To write protect a disc, slide the tab so that you can see through the hole. Now when you insert the disc in the drive, the hole will tell the computer this disc is protected. It's best to write protect the source disc because if you are going to swap between discs then there is a danger of mixing them up and destroying both of them.

Insert the source disc in the drive and press the Space bar. The computer will load data from the source disc. You'll then be asked to replace the source disc with the destination disc. Do this and press the Space bar again. Now the data that was read from the source disc will be put on the destination disc.

During the back up process, you'll be asked to swap discs again as the computer copies a part of the source at a time.

You now have a backup copy of your program disc ready for use, so label it and store the original away in a safe place away from magnetic fields and heat. Do remember to make backup copies of both the Application discs and the other program discs that came with your A3000. Do it now: better safe than without your *!System* folder!

Most discs allow you to back them up. However, some may not: games are generally 'protected' to prevent people giving copies to their friends. Read the manuals for each application that you buy and most will say that you are allowed to make a backup copy for personal use.

Now you've done it the proper way I shall introduce a much quicker way. Your A3000 has at least a megabyte of memory and a disc stores only 800K, so why does the computer not do it all in one go?

This is the perfect opportunity to introduce you to the Task Manager, the application that allows you to specify how the memory in your machine is shared out.

Backing up: swap the discs over carefully

Task Manager: maximise the free memory

Click Menu over the Archimedes icon in the bottom right of the screen and select the Task Display menu item. A window will pop up. Make it fill the whole screen by clicking on the Toggle Size icon.

The first two bars are the Next and Free memory bars. Whenever you run an application, it will take memory from the Next bar. Its name will appear alongside a new bar showing how much memory it uses.

Now set the Free bar to maximum by clicking on it and dragging it as far right as possible. You will need to set it to 800K or as close as you can get. This free memory is used to hold the data being transferred. For instance, if 100K were free, you would need to swap the disc eight times. If it is about 800K, you will only need one or two swaps for each disc.

Close the Task Manager and back up the rest of your discs the quick way.

## Copying files

We now know how to backup a whole disc of programs, but you also need to learn some other copying techniques. If you use *Genesis* to develop an address database, create a picture with *!Paint* or write some letters with *First Word Plus* you need to make copy of your files in case the disc they are on gets damaged. This is really another type of backing up. But in this case you don't want to backup a whole disc, just a few files.

Once again set the Free bar to maximum and take Applications Disc 1 and bring up its directory viewer on the screen. Take a fresh disc and bring up its directory viewer as well by inserting it in the drive and clicking on the drive icon (if the disc won't fit, take the other one out first!). If you like, name this new disc by moving over the name sub-menu on the drive menu and typing in 'Disc\_1'. After you have done this you will need to bring up the viewer again, with Disc\_1 in the title bar.

To copy a file, simply hold down Select over a file on the Application Disc 1 viewer (use the PaintDemo file in this case). A small flashing box will appear around it. If you now move the mouse, this box (a drag box) will move with it. It signifies that you have 'grabbed hold' of this file. If you now move the pointer over the Disc\_1 directory viewer and let go of Select you are telling the computer to take this file and copy it to this disc. The computer will ask you to insert App1, the Applications Disc. Do this and click on OK. Now you'll be asked to insert Disc\_1: again click on OK when you have done this. The PaintDemo file will now appear on your Disc 1.

Your BBC A3000 has only got one disc drive, so copying files, applications or

whole folders will require a large number of disc swaps. This can be very tiresome and can easily be avoided by using the Ram Filing System to create a Ram disc.

The Ram Filing System is just like a floppy disc, except that the data is held in the memory of your machine instead of the surface of a disc. You can specify how large your Ram disc is by bringing up the Task Display and clicking Select next to 'Ram Disc'. You can stretch out a bar telling the computer how much memory the Ram disc takes up.

With an unexpanded A3000, the size of Ram disc you will be able to set depends on other settings you have for other areas of memory. A Ram disc of 100K should do for now, because we are going to copy the *!Paint* application onto it and the application itself is only 75K long.

With the Ram disc set, click the Close icon at the top of the Task window. You should now see a Ram icon on the left side of the icon bar alongside the disc drive icon.

You are now ready to use the Ram disc for copying. Insert Application Disc 1 which contains the *!Paint* application. Click the disc drive icon to display the directory viewer on the screen. Now click the Ram icon. This will display an empty directory viewer on the screen.

'Grab' hold of the *!Paint* application, by holding down Select over it, and drag it to the Ram directory viewer.

Close the Application Disc 1 directory viewer and place your Disc\_1 in the drive. Bring up its viewer. This time you wish to 'move' the *!Paint* application from the Ram disc to your Disc 1 rather than copy it. To move a file, hold down either of the SHIFT keys and then grab hold of it. Drag *!Paint* to your Disc\_1 viewer, keeping SHIFT pressed, and let go of the Select button. Now let go of the SHIFT key and *!Paint* will be moved on to your disc.

## Resetting your computer

Sometimes when using your A3000 things will go wrong. It could be that the program you are running fails or you can't use the desktop or the keyboard. You may even need to clear out what is in the computer's memory or to reset the computer totally.

Of course you could switch the computer off to do this, but that is rather drastic! There are far better ways of resetting your computer and a number of keys that can help: ESC (Escape), CTRL (Control), BREAK and the Reset switch.

The mildest reset is to press ESCAPE: this is effective for exiting from routines that have gone wrong. Pressing ESCAPE does not really reset the computer, it just abandons the current operation if it can.

You could also try pressing **BREAK**. This will reset the computer, but it will

# PINEAPPLE SOFTWARE

## The Pineapple Software Real Time Colour Video Digitiser

What is a Real Time Video Digitiser? There are quite a few different 'Digitisers' available for the Archimedes but very few can accurately claim to fit the above description. The requirements are that it must be able to 'grab' a single field of video information from a colour moving source, such as a video recorder, TV, or video camera, and then process the image and display it on the computer screen.

The Pineapple Digitiser does just this, - and at a price which is less than some Digitisers which can only handle static images.

### HARDWARE

The hardware consists of a double width podule which fits inside a 300 or 400 series Archimedes, and comprises a PAL colour decoder, 256K memory and various control and interface circuitry. The PAL decoder converts the input signal from your TV or video recorder into separate red, green and blue signals. These are then converted into digital form and stored in the 256K ram in a format giving 512 pixels across the picture and 256 rows vertically. The video signal in the ram is constantly changing at the same rate as the incoming video picture until the podule receives a signal from the computer to 'freeze'. At this point the last picture in the ram is frozen and can be transferred to the computer screen in many different ways depending on which software commands are issued.

### SOFTWARE

The software to drive the podule is supplied on disc in the form of a relocatable module. This provides a host of additional '\*' commands and SWI's which can be used even by inexperienced programmers to produce very impressive displays of live pictures or ones previously saved on disc. For non-programmers, ready written programs are provided to explore all the features of the Digitiser and produce 'Sprite' images which can be used in many other applications and 'Art' packages. The software is very easy to use and scaling routines are provided which allow you to manipulate the grabbed image by selecting any part of the picture (using a box drawn on screen controlled by the mouse) and placing it on any area of the screen, again using a box to select the position and size. This enables multi-picture images to be produced very rapidly using either live pictures or ones you have previously saved on disc. The 80 page handbook provides full details of how to implement the commands even for the inexperienced programmer.

### EDUCATION

The Digitiser has many uses in education. The software commands can show many of the effects typical of the digital storage of TV pictures which can help to explain the way in which TV works. It can also be used to produce powerful audio-visual displays tailored to your own requirements from images captured using video cameras etc. For younger children, programs can be created to help learning by giving high quality visual images of animals, birds, trees etc, built into a 'quiz' format. The possibilities here are endless.

### FUN & GAMES

As well as showing off to all your friends who don't have an Archimedes, what a great computer it is, you can use the Digitiser to produce images for all sorts of games and visual demonstrations. Games such as 'Guess the Celebrity' or 'Guess the Advert' can be produced by even inexperienced programmers, simply by 'grabbing' all the necessary images from TV and saving to disc.

### SPECIFICATION

Video Inputs	Pal coded video, .75 Volts - 2.5 Volts pk to pk R, G, B & sync input All inputs may be terminated by internal DIP switches.
Resolution	512 x 256 pixels
Storage system	Standard version 4 bits Red, 4 bits Green, 4 bits Blue - 192K Ram Extended version 5 bits Red, 6 bits Green, 5 bits Blue - 256K Ram
Picture Area	The Digitiser hardware allows the full screen area normally viewed to be stored in the podule ram. Horizontal shift, Vertical shift and width can be adjusted internally if required.
PAL Decoder	The PAL decoder provides manual control of Brightness, Contrast and Saturation, combined with full auto saturation control.

## NEW! NEW! NEW! NEW! NEW! PAL COLOUR CODER

A new hardware product now available from Pineapple is a high quality colour coder unit. This unit produces a full coded video signal from the Archimedes computer which enables you to feed the output of the computer into a video recorder or second colour TV monitor.

### FEATURES:

1. External to computer - no podule slots required
2. Sync regeneration to provide correct broad pulse and equalising pulse wfm
3. Switch selectable to 624 or 625 line operation - for interlaced or non-interlaced screen modes
4. Plugs into RGB computer socket and provides buffered output to feed Archimedes monitor + coded signal output
5. Adaptable for use with other computers or RGB and Sync signal sources.

**PRICE £69.00 + VAT. P&P FREE**

### NEW LOW PRICES!

### BBC PCB Designer

### NEW LOW PRICES!

This ever popular ROM based PCB designer is suitable for all BBC Micros. It's fast high-density 1:1 scale print routine allows prototype boards to be made directly from a printout, and a 2:1 scale print may also be used to produce professional quality boards. A second Eprom is optionally available to add a powerful auto-track routing facility to the program. This utilises a 'rats-nest' input routine and allows any component to be 'picked-up' and moved around the board without having to re-specify component interconnection.

The full auto-route facilities are available even on a standard unexpanded Model B.

'PCB Autoroute is remarkable. No similar software comes near the price.'

Acorn User- Aug 88

### PRICES

Manual track routing	£55.00
Auto track routing	£85.00
Plotter Driver	£35.00

**STILL AVAILABLE AT NEW DISCOUNTED PRICE! DIAGRAM II £25.00!**

### ADFS Utilities Rom

ADU is an invaluable utility for all ADFS users. It adds over 22 new '\*' commands to the ADFS filing system as well as providing an extensive menu facility with over 35 sub-commands covering such areas as repeated disc compaction, saving and loading Rom images, auto booting of files, and many more. Transferring of files from DFS to ADFS is also made very easy

reset less of it than a 'hard break'. But you may find you will need a hard break so let's show you how to do that: hold down either of the CONTROL keys. Press and release the BREAK key, then release the CONTROL key.

An even severer form of reset is a hard reset. To do this hold down either of the CONTROL keys. Press and release the Reset button, then release the CONTROL key.

## Making a graphics disc

Application Disc 1 contains a host of useful programs for the first-time A3000 user, but to get the best from them the programs need splitting onto various discs.

Say, for instance, that you want to use the A3000's graphics. I suggest you make a 'graphics disc' to hold the graphics programs and the paintings and drawings you create.

Starting from scratch you should format a new disc, and then copy the !Draw and !Paint applications on to it. Don't forget to use the Ram disc to speed things along. You should also make a copy of the !Fonts folder, and the printer driver that matches your printer. It is also worth copying the !System folder too, as that will save you having to insert the Application disc each time.

With copies of all these programs on the new disc, it's worth remembering to name the disc as you did before.

Once you start creating paintings and drawings, you will need to think about tidying up your disc so that there aren't lots of separate Draw and Paint files cluttering up the directory viewer. A good way of tidying things up is by creating two folders to store your paintings and drawings. You should call these DrawFiles and PaintFiles, and put your files in them.

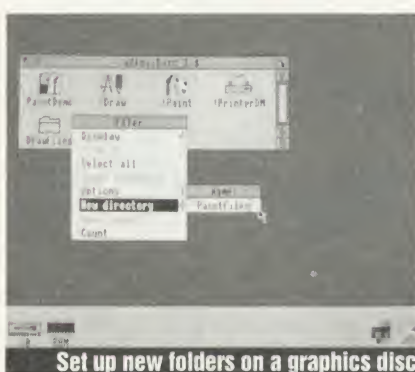

Making these new directories is easy. With your new graphics disc in the drive, click the Menu button on the mouse when you have the pointer inside the Directory Viewer. This will call up the Filer menu. Move the pointer down and over the New Directory sub-menu. This will bring up a dialogue box: when you type in a name, a new directory will be created. Do this for a DrawFiles and a PaintFiles directory.

If you or one of your family are musically minded or just want to experiment with the electronic music that the A3000 can make, it's worth creating a music disc too. This is accomplished in the same way as for the graphics disc.

## What is !System?

Have you noticed that the Application disc 1 that came with your new computer has a folder marked !System? Its appearance is rather different to the other folders, so what is it?

The !System folder is an application folder which is easily differentiated from

standard folders as it has a special style of folder icon rather than the normal plain blue icon. !System contains the 'system resources'. It is here that Risc OS expects to find the various relocatable modules which it needs to run programs.

Double clicking the !System folder does not open the folder; instead this runs some special script programs (!Boot and !Run). To open the !System folder to see what's inside it, you have to press down the SHIFT key and double click the !System icon at the same time. This will open up the folder and show files with names like !Run, !Boot and !Sprites. There will also be a sub-directory folder called Modules. To see what this contains, you can double click on it. If you examine the !System folder on Application Disc 1, you will find its contents are the CLib, Colours and FPEmulator modules.

CLib is the shared C library, which is needed by many applications. It appears in the Modules display as SharedCLibrary. Colours is a module called ColourTrans which is used to handle colour settings.

FPEmulator is the floating-point maths system also needed by many programs.

Applications like !Edit, !Draw and !Paint, which are compiled C programs, need these system resources, and expect to find them in the !System folder and the Modules sub-directory. The application will normally check to see if the module has already been loaded, and if not, it will load what is required. The idea is that the use of !System and shared libraries prevents several copies of the same resources using up valuable memory space.

Many commercial applications include a copy of !System on the program disc. This is usually the case if a non-standard module is required such as ABCLib, the Dabs Press ABC Basic compiler library.

It can be a good idea to merge !System folders. To do this open a directory display containing each !System icon and drag the new one into the existing one. Risc OS will correctly merge the two folders.

But a point of caution! Some newer A3000 applications will only work with the latest versions of certain modules. For instance Colton Software's Pipedream needs version 3.5 of CLib rather than the version 1.2 supplied on Application Disc 1. Risc OS of course will notify the user if the wrong version of a module is available.

A word of warning if you do have copies of !System on various discs. The first time that you see the !System folder, Risc OS will remember which disc this was on. And if you subsequently load another application from a different disc (even one that contains its own !System), Risc OS will remember the whereabouts of !System and it will ask you to re-insert the original disc. That's why you're better off keeping one working copy of !System on what could be called your System Disc.

## Leaving the desktop

Many people will find that they never need to leave the Desktop and use the Command Line mode. Others with specialist uses for their machine will use this facility a lot of the time.

There are a number of ways of leaving the Desktop. Probably the easiest is to press function key F12, which brings up the star prompt and Command Line mode.

Another way is to use the Task Manager on the bottom right of the screen. You simply click the icon with the Menu button and choose star commands from the menu (the menu also reminds you that you can use F12). From command line mode, you can type in any normal star commands - try \*MODULES, for example, to list the relocatable modules in your machine.

Returning to the Desktop afterwards could not be simpler: a couple of presses of the RETURN key will do it.

# ACROSS THE BOARD

**R**eaders in Scotland, Northern Ireland and other countries please bear with me if, for yet another month, I concentrate on the National Curriculum in England and Wales. The pressures on teachers to deliver all aspects of this are immense and any help in delivering the IT components both now and through the coming years is needed!

It is for this reason that I have concentrated in recent issues on the Archimedes and BBC A3000, as this 32-bit technology is clearly the way forward for educational computing.

The technology orders reserve one whole attainment target for IT – AT5 (Information Technology Capability). Here and in the relevant programmes of study, IT capability is evaluated in terms of: use of computer, wordprocessing, data handling, Logo, spreadsheets, DTP, art/graphics software, CAD, control technology, data logging and to a lesser extent, adventures, simulations and music software.

It takes a developmental approach, emphasising a progression of skills in the following areas:-

- communication (BAU Nov 90)
- information handling (BAU Dec 89/Jan 90)
- modelling
- measuring and control
- the application and the effects of IT

If the IT component of the National Technology Curriculum will have one major effect, it will be the removal of IT (the subject) from the timetable. IT will be placed firmly in every lesson – out of the lab and into the classroom.

## Communication

Wordprocessing and presentation software were discussed in the Nov 90 issue of BAU, and since that time I have been able to evaluate *Impression 2* and *Junior* (Computer Concepts).

For straightforward wordprocessing and presentation, *Impression Junior* is the natural choice, especially at key stages 3-4 where it offers progression of DTP skills from *Pendown* (Longman Logotron) at key stage 2. It also provides an ideal launch pad for *Impression 2*, a professional software tool for key stage 4 and sixth form colleges.

If you require a wordprocessor with built-in numerical capabilities then *Pipedream* (Colton Software) is the natural choice as it is a spreadsheet in its own right and enjoys excellent real-time, graphing facilities with *Presenter* (Lingenuity).

*Impression 2* is the only comprehensive DTP program for the Archimedes at the time of writing. It fits comfortably into a 1Mb machine and has so many page design features that it's head and shoulders above the competition.

Other presentation tools with a strong design flavour are *Poster* (4Mation Educational Resources) and *FontFX* (Datastore). The former program does to text what a potter does to a lump of clay – viz mould, fashion and distort text anywhere on the paper treating it as putty. Whether a school uses it for DTP effects or for making posters up to A2 in size (complete with cutting and pasting guides), *Poster* will not disappoint. A complex program, it is suitable for pupils at key stages 3-4.

For designing logos and interesting textual effects to include in desktop published work, *FontFX* is both simple to use and fun. Although not of *Poster*'s calibre, it does give an interesting and imaginative design aspect to presentation work.

A graphics library is a must for use in wordprocessed documents, DTP and multimedia applications like *Genesis*. *World Geography Maps* (Micro Studio) is the first of a number of graphics library packs.

There are 150 well drawn maps, each in !Draw format and as such can be coloured or scaled as desired and included in virtually any Arc application. Further titles include *Tools*, *History:Costumes*, *World Wildlife* and *Prehistoric Animals* packs.

## Information handling

Archimedes' data handling software for young children is thin on the ground al-

## CHRIS DRAGE outlines the role IT will play in the National Curriculum

though if you have an A3000 fitted with the Pres A3K6/12 DFS, you can run (and print from) *Display Data* (Resource), *Data Show*, *Branch and Sort* (all Mesu) but not *Our Facts*. However, other Arc data handling programs for key stage 1 include *DIY Base* (Resource) and *Datasweet* (Kudlian Soft). The latter program offers a superb introduction to database management, spreadsheets and graphs, and to Risc OS itself. It presents all information in an uncluttered and attractive format.

Another data handling program designed with the National Curriculum in mind is *Dataking* (Shenley Software). Although it can be used at three different levels of operation to suit a wide age range it is probably best suited for children beginning key stage 2 and upwards.

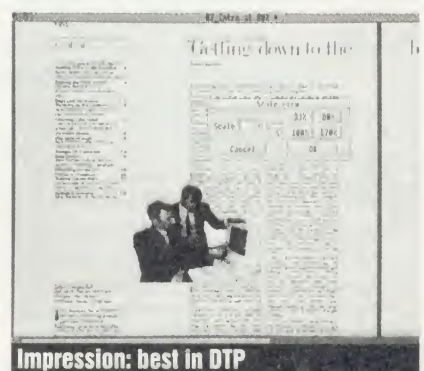

In the absence of a junior version of *Key Plus* (expected next year), *Dataking* fulfils all the requirements and as a bonus, runs on Econet. It includes a wide range of graphs and charts and the ability to print labels.

Although the history orders are not finalised, keep in mind three excellent historical datafiles for interrogation from Resource – *Castle Pack*, *Cateby Manor* and *Forge*.

## Modelling

The technology orders do not require children to use IT tools for design purposes until level 4. They are expected to explore/find rules and predict using software like simulations and adventure programs. Unfortunately, there is no recognition of the vital role such software can play in science and the humanities. With an A3000 upgraded with the Pres A3K6/12 disc interface you can run a number of BBC B simulations/adventures. Among them:

- *Into The Unknown, 1665-The Great Plague* (Tressel)
- Almost all the Fernleaf simulations
- *Coffee, Search, Rescue* (Storm Software)
- *Slick* (BP Software)
- Most of 4Mation's adventures

**Impression: best in DTP**

## Fun School 3

**UNDER 5's Includes:-**

- COUNTING - Help teddy reach the jar of honey by counting up to nine
- LETTERS - Join in all the fun at the alphabet fair by pairing large letters
- MATCHING - Pair up the shapes to fill teddy's piggy bank with money
- ACTIONS - Make teddy jump, hop, sleep, juggle, skip, eat & more
- PAINTING - Colouring fun down on the farm with all the pigs & cows
- GALLERY - Learning to read is really easy in the Fun School Gallery.

**5-7 YRS Includes:-**

- TOYSHOP - Spend your pocket money wisely in the shop
- TIME - Tell the time & watch the cuckoo clock come alive
- FUNTEXT - Explore the Ceefax-style database & take the challenge
- COLLECT - Guide the frog from log to log to create & solve the sums
- ELECTRICITY - Fix the incorrect circuits to set the bell ringing
- JOURNEY - Travel round the village & learn about directions

**OVER 7 YRS Includes:-**

- TREASURE SEARCH - Follow compass directions to find the jewels
- WORD SEARCH - Pick out the words cleverly hidden in the large grid
- ROBOT DRAW - Create beautiful patterns & learn how to program
- PLANETARY MATHS - Solve the sums before they hit the forcefield
- SENTENCES - Correct spelling, punctuation & grammar mistakes
- DATABASE - Store information, sort it, search it, then test yourself

Release postponed - now due approx January 1990 - Prices per level

SRP BBC/ELE Cass £12.99 **Sale 9.95**

SRP BBC 5.25" Disc 16.99 **Sale 13.95**

SRP ARC Disc (Possible release Feb 1991) £24.95 **Sale 19.95**

(Cheques cashed / credit cards debited only on day of despatch)

● Almost all Sherston Software's adventures except those with a 'start-up' disc (see last month for simulations with a science theme).

There are several notable design tools for the school's Archimedes. *Fads* (Advisory Unit) is almost guaranteed to capture those uninterested pupils who, for one reason or another may regard computers as rather 'aggressive objects'.

The program will accept body measurements to draw a human figure on screen onto which different clothes may be 'placed' to assess the effect of fashion, line, proportion, pattern and colours. Clothes and accessories can be designed and tried; the results may be saved and printed. *Fads* is a really super little program.

At the last BAU show Data Design was showing 'its Archimedes version of the popular *Designer Castles*. The Risc OS version was certainly far quicker and smoother in operation than its eight-bit predecessor. We await the final version with anticipation.

Any discussion of design with the Archimedes must include what has virtually become the standard 3D graphics and animation system.

I mean, of course the *Euclid/Mogul/Splice* trio of packages from Ace Computing. *Euclid* is a Risc OS compliant, interactive, multi-document, 3D, graphics and animation program which is so easy to get to grips with.

Designs can be put together, rotated in real time, zoomed in and out of and viewed in perspective from any position. *Arclight* allows ray-tracing of *Euclid* 3D pictures while *Mogul* can produce 'films' of moving *Euclid* objects and allows 'fly throughs'. *Splice* permits *Mogul* films to be combined with films from other sources.

It is interesting to note that the next set of BBC TV's *Science Challenge* programmes employ *Euclid* graphics.

## Measurement and control

The Technology National Curriculum expects children to use IT to measure physical quantities and to control movement. Control begins at key stage 2 (level 3) and at key stage 3 (level 6) they are expected to monitor physical events and to process, present and respond to collected data. This is developed further at key stage 4 (level 9) where the emphasis is on systems.

The Archimedes with its vast computing power and copious memory will eventually make its mark in control with object-oriented software (like that now appearing for the Apple Macintosh) which is superior to procedural languages in terms of natural usage, and offers children even greater accessibility to computer control.

Such developments take time and until they occur, the ageing model B is arguably

the best computer with which to investigate control in the primary and lower-secondary classroom.

Before an Archimedes can be used for control applications, it requires a user/analogue port expansion board. A300/400 series machines require an I/O Podule (Acorn) while an A3000 needs a user/analogue expansion card (Morley/HCCS).

The best method for connecting a standard eight-input/eight-output control buffer box is Phobox Electronics' user port expander which provides BBC-type printer and user port sockets and plugs into the Arc's user port.

As a result, a printer can be left attached to the Archimedes for listing procedures and printing out commands while the user port expander's metre of cable lets a buffer box to be placed in a convenient location.

Control software for the Arc is in its infancy. Control Logo provides probably the best route for children who have learnt Logo on the BBC B. It runs as an extension to Archimedes Logo and offers the facility to add extra primitives if required.

One of the most noticeable differences between this and previous variations of Control Logo is the ability to alter the power settings on the outputs effectively altering the voltage so that lights can be dimmed and motors made to turn slowly.

However, many of the primitives are immediately familiar to children who have worked with Control Logo on BBC Bs.

As far as monitoring events is concerned there are really only two horses in the race at this time: LogIT and Sense and Control – both of which were discussed last month.

## Applications and effects

In their formative years children are expected to use a computer for simple tasks like extracting relevant information from a database. Overlay keyboards are specifically mentioned as alternative input devices. The school's Concept Keyboard can be used with an expanded Arc (see below) although few Arc programs have this option yet.

The Concept Keyboard Company has developed a customising program, (*Intercept*) to help you tailor a Computer Concept overlay file to suit the needs of your pupils.

Most special needs software has this option and you are directed to the ever helpful Northwest Semerc for further information (BAU Sept/Oct 90 issues).

As children advance through the levels of AT5 of the Technology National Curriculum, the applications in real life and the various effects IT can have on decision making will become apparent.

In effect, any hardware or software children use will produce opportunities for discussion of the nature of IT and its possible ramifications, as well as its problems, limitations, shortcomings and strengths.

Poster treats text like putty

## SUPPLIERS

● The user port expander is available from Phobox Electronics, Holworth House, Holworth, Dorchester, Dorset DT2 8NJ. Price: £25.

● Control Logo is available from Longman Logotron, Dales Brewery, Gwydir Street, Cambridge CB1 2LJ. Price: £20.

● Datasweet is available from Kudlian Soft, Hampshire Microtechnology Centre, Connaught Lane, Portsmouth. Price: £30: primary, £80: secondary. Tel (0705) 378266.

● Datalog is available from Shenley Software, 5 Coombefield Close, New Malden, Surrey KT3 5QF. Price: £49.

● Impression 2 and Impression Junior are available from Computer Concepts Ltd, Gaddesden Place, Hemel Hempstead, Herts HP2 6EX. Prices: £194.25 and £103.44 respectively (discounts and site licences available). Upgrade pack from Impressions 1 to Impression 2 £23.

● Poster is available from 4Mation Educational Resources, Linden Lea, Rock Park, Barnstaple, Devon EX32 9AQ. Price: £89.

● FontFX is available from Datastore, 6 Chatterton Road, Bromley, Kent. Price: £9.95.

● World Geography Maps are available from Micro Studio, 22 Churchgate Street, Soham, Cambridgeshire CB7 5DS. Price: £29.95.

● Fads is available from Advisory Unit, Endymion Road, Hatfield, Herts AL10 8AU. Price: £25.

● a) Euclid, b) Mogul, c) Splice and d) Arclight are available from Ace Computing, 27 Victoria Road, Cambridge CB4 3BW. Price: a) £70 b) £20 c) £30 d) £50.

**I**n last month's article, I tried to define exactly what (and why) 'demos' are, and didn't manage to reach many clear conclusions! It then occurred to me that perhaps the best way for those of you who have never seen one to appreciate what I'm getting at would be to put one on the monthly disc. So included this month, in the Freebies directory on the 3.5in disc, is a demo from a Leicestershire-based team comprising the coding talents of W Frisby and A Neville, collectively known as TCD or 'The Chip Duo'.

This is their first effort, and contains impressive examples of many of the features you might find in an archetypal demo. To obtain the best results from the program, hook up a stereo (or some earphones) to your Arc and turn up the volume nice and loud. You'll see a sine-wave scrolltext, a worm-like chain of globes which weave around the screen, a typical four-level parallax starfield, and a nice piece of multi-coloured 3D vector graphics, not to mention the great music. No self-respecting demo-writer should leave more than a few of these features out! All this is happening on screen at once, and perfectly smoothly with not a flicker in sight...

I should explain that 'flickers' are a problem brought on by making the computer try to draw too many things on the screen at once and allowing it to get caught unawares halfway through updating the picture! I should also explain that flickering is a kind of demo-writers' leprosy and a juddering

screen is the kiss of death to the ambiance of easy and laid-back technical brilliance that the author/s are trying to create.

There is a friendly rivalry (and a certain amount of good-natured jibing) about the subject of stuffing as many drawing instructions and sprite

manipulation commands into one screen-update, or V-Sync, as is physically possible. 'V-Sync Cramming' is just one of the areas where the techniques are being constantly honed and improved to give the progressively cleverer illusions needed to keep the viewer's attention. With the TCD demo, you can use the mouse to control the direction in which the scrolltext moves. Use the Select button to start it going to the left, Adjust to make it go right and Menu to keep the wave moving, and freeze the text where it is. By the way, if you can't be bothered to sit through the message, then just load the whole file into !Edit and then use the search utility to find the text. The demo is very friendly and will return you cleanly to the desktop if you press ESCAPE. The music is played, as in many demos, using the 'Soundtracker playroutine' written by Hugo Fiennes. This module allows music/sample files ported from 16-bit machines to be played on the Arc, giving only a small (but variable) reduction in the speed of other operations/applications running at the same time. What's more, the routine is public domain, so anyone is free to use it in their own programs as long as a credit is given.

It is now possible to write your own music to accompany demos using The Serial Port's *Tracker* package. The author of this program is one Fabrice Mercier, who is a member of a French programming crew

**MATHEW TIZARD** stuns us with some of the effects of demos, and gives an insight into the brains that lie behind them

# SOUND AND VISION

known as Arc Angels, who were responsible for the *!Balls* and *!ArcAngels* demos mentioned last month. Hugo Fiennes also goes by the name of Alt-Man. He was the man who started the ball rolling for Archimedes demo-writing and it's his work which gave others the inspiration to write more. He has produced five demos (and is currently working on a sixth) and although they do look a little simple by the latest eye-popping standards, they are nonetheless classics of their kind. He is also the master of the amusing scrolltext. Here are some examples of his potted philosophy – 'How long a minute is depends on which side of the bathroom door you are on', 'It is a mistake to let anything mechanical know that you are in a hurry', 'If you hit two keys at the same time, the one you didn't want appears on the screen', etc, etc.

Other demo-writers include the odd bit of wry humour in their work as well. For example, the '32,768 colours' demo from Noah is patently impossible, since the unexpanded VIDC hardware can only cope with 4,096 colours anyway. However, nobody is absolutely sure if it's a joke; nobody's been bothered to count the colours yet! Many people have been taken in by that particular demo though, and are surprised when they're put right! Other prolific Arc demo-producing crews include Brothers In Arm, from Norway, who have released no less than eight demos to date and not forgetting SICK...

SICK (The Slightly-Intelligent, Crazy Rosebush... No, don't ask me why they're called that, or which one of them can't spell for that matter!) are a group of Arc enthusiasts from Dublin. I've had a sneak

preview of their latest 800K megademo, 'Bananaland', which is nearing completion. Very impressive it is too, containing several sections: the obligatory star-fields, a scrolltext which scales new depths of illegibility, and a pair of 3D spinning globes (with disproportionately large Irelands!) Another part of the demo is a sequence in which about 100 globe-sprites spin around, in pseudo 3D, obeying complex equations of motion. This part is based on a program of theirs called *Spuon Dancer* and gives a stunning effect similar to that in William Latham's award-winning short computer generated film – *The Evolution Of For*. A megademo is simply a demo which grows, and has chunks added to it, until it becomes so large that it eventually takes up an entire disc. Understandably, these enormous works can take anything up to a year or more to finish (but this might well have something to do with either the creative blocks their writers experience, or the fact that they can't be bothered to finish them!) For those of you who are now dying to write your own demo, but haven't got any coding experience – don't despair. It is possible to achieve

some pretty stunning effects using nothing nothing but Basic V and a little imagination and artistic ability.

Demos are an art form of their own. They're collector's items, which really amount to an excuse to show off on the part of the programmer! They're stimulating, sometimes breathtaking, sometimes banal or just plain silly, but always entertaining. There is however a strong sense of irritation bordering on anger, that the people who create them don't do anything constructive with their obvious programming ability, and near-genius (in some cases). I agree with this, and urge any prospective writers of demos to write them by all means, but also try to think of some practical application for the routines. For example, I've seen demos containing ideas which would make marvellously original games, but they never see the light of day.

Anybody who's written a good machine-code demo, feel free to send me a copy here at BBC Acorn User, 20-26 Brunswick Place, London N1 6DJ.

## BOX COPY NEW DEMOS

- The Chip Duo (Bill & Nevy) *!TCD* (on the monthly disc)
- Brothers in Arm *Raytrace2* Arc Angels/The Swiss Section
- *!Beastie* (4096 colours)
- *!Artwork* Justin M Fielder

- *!Rats* (bouncing rodents) SICK (Dublin) *SICK-1*
- *! 'Bananaland'* (under development)

**SAM GREENHILL** with more clues on the escape from this classic adventure

**L**ast month I revealed the first half of the *Exile* map but you're now pretty stuck until next month because you won't know where (J) is until we print the lower half of the map. But, for now, let's continue with the clues...

(28) Save your position on a separate disc and explore for now. Basically, (J) is the bottom of the windy shaft. See how far you can get before next month. The next bit's easy anyway. <P> boulder and <FD> windy shaft using @.

At (J) <R> then take boulder up again to (H3). <D> and <T> to (J). <R>.

(29) <J1> and <PS>. <J3> and <F> all the piranhas. <J2> and entice the fireball in for a swim. This should dampen its spirit. (30) <J04>. Kill the imps then fly through the crack (it is possible!) to get the key. This can be used to deactivate the transporters at (C3) and (C4).

(31) Drift up the windy shaft to (L). <JL1> and scroll left. Wait for an imp then <JL2>. Wait for the door then get the whistle.

(32) <J4> switch off the transporters at (C3) and (C4) then <J6>. <R> then leap up to the protection suit and shoot it down. <T> before the grenades explode. <P> the protection suit. Note you have found an infinite supply of grenades.

(34) <J5>. Destroy the turret with the icer or test out your newfound grenade supply. Open the door. The switch at (K1) can be used to destroy robots later in the game.

(35) <J2>. <TH> a grenade through the crack to push the robot into the transporter, then <J1> <PS>. Chatter the small round blue robot is an infinite supply of energy. Collect mushrooms, pass them through fire to make them into coronium, then feed them to Chatter and whistle. Wait until you have the radiation pill if you can.

(36) <J2>. Squeeze through the crack.

(37) <TH> two grenades at the beehive. <\*>. <FR> and either push or shoot the block to <J7>.

# OUT OF EXILE

(38) Take the large block to (M) via (L3). It is to protect you from the green frogmen. Put it between them and you.

(39) <SAVE>.

(40) <J5>. The pink frogman is afraid of blue mushrooms, and loves pink grubs. He is (conveniently) attracted to the large block. Pink grubs like noise and are in limited supply so you must be economic with them. Get a pink grub and use it to lead the frogman to (M).

(41) Let the pink frogman push the green frogmen into the fire at (M5). Note that it is important to stand on his head while he does this. Push the block into the water at (M1) then <R>. <SAVE>.

(42) <JN2>. P.P.P. Pick up a piranha and <S>. <F> the others. Get the pink frogman to (N3) via (N2) (using grubs). Get him to push you to (N4) by holding a grub in front of you. In some versions of *Exile* the blue mushrooms don't completely space you out and so you can still walk. Get the fish at (N) or the coronium rock at (N6) to weigh you down, and then you won't need the frogman.

(43) Stand at (N5) and <G> the piranha. Then <S>. Repeat this until the radiation pill is within reach. Go get it. Keep the piranha.

(44) <T> to (M1). <JN6>. Take coronium boulder to (M7) and <R>.

(45) <JM8> and <FU> fast shooting the switch to the right. The door opposite the gargoyle will open making it easier to miss the fireballs.

(46) <JM6>. <F> the birds. <P> the coronium boulder and <D> down past the gargoyle. <T>. Push the block into the water at (M1). Take the boulder to (M1) and <D> it on top of the block.

(47) <JM7> and drop the other boulder so the two make contact just next to the door at (M1). <\*>. A nuclear explosion follows. (48) <J5>.

Feed an imp with a piranha and get it back to its nest. It will give you a nice present, even nicer than the other presents you've been given.

(49) <JM8> and <R>. <PS> until the vertical door is closed. <JM9> and <F> switch. <JM2> and <P> boulder. <FL> fast and

<TH> the boulder so it lands just to the left of the horizontal slab. <JM2> and <D> RCD. <T> to (M8). <F> the switch to close the door. <P> boulder and <SAVE> then take it to (J5). You have to sneak past the imps in order to stop them detonating the coronium, but don't kill them, they are useful later on.

(50) You need another coronium rock to blow the door. Get some coronium crystals from the imps and feed them to the green slimes at (M3). They will turn into yellow boulders. Take a yellow boulder to (M4) as per instruction (49). Put it under the acid drops at (M4).

(51) Blow the door at (J5) and retrieve any equipment left at (M2). Incidentally there is no way of getting coronium or slimes from the right to the left of the windy shaft. You must use (O7) and (J9). Get the block to (J5). <P> the big fish at (N) and take it to (O1). Push it into (O2), then <J5>. Empty your pockets. <P> and <S> two grubs and two coronium crystals. Push/shoot the block to (J). <R>.

(52) Push the block down the hole at (J6) to block off the suck pit. <J4>. The cavity at (J9) contains a slime nest. <J7>. <TH> a grub up towards (J9). If the grub continues onto (J) <T> and get it. When the slimes appear, wait until they come to the left near you then make lots of noise. They will burrow down through the rock. When they're out quickly feed them with the coronium crystals. This is extremely tricky and frustrating.

(53) <SAVE>.

*The solution concludes next month*

# Genesis II

All the creativity of Genesis - plus ....

- ◆ Data compression      Genesis II applications typically use one third of the disc space used by Genesis I applications
- ◆ Sampled sounds      from Armadeus, played from disc to reduce the memory requirement
- ◆ Enhanced text      multiple styles and colours within a single frame, left, right or fully justified and centred formats
- ◆ Improved single disc use      reduces the number of disc swaps required when creating new applications
- ◆ Smaller, faster databases      single page per database, using CSV (comma separated value) files
- ◆ Concept Keyboard support      use the Concept Keyboard to control your Genesis II applications
- ◆ Multimedia applications      control CD-ROM drives and Video Disc players to create multimedia applications
- ◆ Powerful script language      create your own RISC OS multi-tasking applications with icons, menus, dialogue boxes etc

All Genesis I applications may be used with Genesis II without modification.

**Education users - upgrade for only £34.95 ex vat**

**Genesis II will be available at  
the BETT'91 exhibition  
January 16-19 1991.**

**Price:**      £99.95 ex vat education  
                 £149.95 inc vat rrp  
**Upgrade:**   £34.95 ex vat education  
                 £59.95 inc vat rrp

To qualify for the upgrade price, please return your original Genesis **Editor** Disc to Software Solutions at the address below from January 20 1991.

Broadway House, 149-151 St Neots Road,  
Hardwick, Cambridge CB3 7QJ  
Tel: 0954 211760 Fax: 0954 211767

# Hardware & Software

— for the Archimedes —

## LASER-DIRECT

The low cost 300 dpi. super fast, direct drive laser printer for the Archimedes.

£999.00+VAT (£1148.85 incl.)

## LASER-DIRECT Hi-Res

High resolution (up to 600 dpi) 8 page per minute laser printer. 4 Mbyte RAM recommended for maximum resolution.

£1495.00+VAT (£1719.25 incl.)

## LASER-DIRECT Hi-Res Board

Expansion board only, suitable for a standard Canon LBP4. Up to 600 dpi resolution and fast direct drive printing.

£350.00+VAT (£402.50 incl.)

## IMPRESSION III

Impression II with its combined Wordprocessor and DTP program has become the industry standard for the Archimedes & BBC A3000.

£169.00+VAT (£194.00 incl.)

## IMPRESSION Junior

Junior is the entry level member of the Impression family.

£89.95+VAT (£103.44 incl.)

## SCAN-LIGHT Junior

Probably the most popular family of scanners for the Archimedes, the Scan-Light series offers top quality scanners with the best software around.

£189.00+VAT (£217.35 incl.)

## SCAN-LIGHT A4

A full A4 width hand-held scanner offering a choice of 4 resolutions from 100 to 400 dpi.

£399.00+VAT (£458.85 incl.)

*Scan-Light A4 with sheet feeder*

£499.00+VAT (£573.85 incl.)

*Illustration features Archimedes, Scan-Light Junior and Laser-Direct HI-Res.*

# ATTRACTING ALL SORTS

**M**any computer graphics programs have been based on what is known as Chaos – complex patterns arising from simple mathematical formulae and having a strong dependence on the initial conditions.

This program illustrates one of the earliest known mathematical objects of this type, the Lorenz attractor. This is a three-dimensional figure which has been described as looking like a mask or a butterfly's wings.

It is often used as a symbol for chaotic behaviour, for example in *New Scientist's* recent series on chaos, but it is rarely seen on computers.

This program enables you to see it in all its 3D glory and to watch the dynamic process that is at its heart in motion.

Chaotic behaviour generally occurs when a non-linear function is repeatedly applied to a variable or set of variables. When this is done, the variables often end up moving towards a certain value or set of values, sometimes ending up in a repetitive cycle.

These values and cycles are known as attractors, and a given function can have several.

To make the behaviour of the variables visible, they are used to define the co-ordinates of a point, with the number of dimensions depending on the number of variables.

Mandelbrot pictures, for example, are produced by repeatedly applying a function to a pair of variables, and seeing if these move towards an attractor at infinity.

If they do, the point corresponding to that pair of variables is given a colour depending on how fast they move towards infinity.

If they don't, it is coloured black. Whereas the Mandelbrot function has two variables and is plotted as a flat picture, the Lorenz function has three, and therefore has to be plotted in three dimensions.

**MICHAEL ATTENBOROUGH** unleashes the phenomenon of Chaos in 3D, in the form of the Lorenz attractor

The relationship between the function and the picture is simpler than in a Mandelbrot plot – some initial points are set up, then the function is applied to all of them to give a new position for each.

The variables only change a little each time the function is applied, so the points move a short distance. When the process is repeated, the points can be seen to move on curved trajectories.

The points shown on the screen are just the 3D representation of the current values of the variables.

The attractor for the Lorenz function is not a point or a repeated cycle, but what is known as a strange attractor. When drawn in 3D, it appears as two whirlpool loops with flow lines going between them.

The attractor has infinitely fine structure (like a Mandelbrot set), and it is impossible to predict which loop a point will move to in the long term – these are common properties of chaotic behaviour.

The Lorenz function is similar in some ways to the equations describing weather, and watching this program may give you some idea why long term weather prediction is impossible.

The program allows you to watch a group of points moving into and around the attractor, and you can rotate the whole picture in 3D at any time using the left and right cursor keys.

The moving points are drawn in real time, but the background of the attractor is drawn beforehand as a series of sprites. The number of sprites drawn depends on how much

free memory the program can find – more memory enables the picture to be rotated through a greater angle.

When the background sprites have been drawn, a menu will appear which gives you a choice of four initial distributions of points. You can choose from a cuboid en-

closing the attractor, a line, or a tightly or loosely bunched random group.

When you have chosen the initial points, they will be shown against a background of the attractor. From this point onwards, the picture can be rotated both ways with the cursor keys. Press the space bar to start the points moving.

The bunched point groups demonstrate that even if you know the initial positions (the initial values of the three variables) to a high degree of accuracy, it is not possible to predict where they will end up.

Even the tightly bunched group is, after a few revolutions, stretched into a line which is then broken into two and mixed with itself repeatedly.

Pressing ESCAPE during the animation will return you to the menu without having to wait for the background sprites to be redrawn.

The background pictures are produced by taking one initial point and repeatedly applying the Lorenz function to it, connecting the points it goes to with lines. The same picture is drawn several times from different angles.

This is perhaps not the 'real' Lorenz attractor, but its infinite structure makes it impossible to draw in more than outline.

# The CJE ARM 3 Upgrade + SUPER BOOSTER

The CJE ARM 3 runs at 30MHz, but with our optional ARM 3 Super Booster it will allow you to run your CJE ARM 3 at higher speeds.

For example 33, 34, 35, 36 MHz may be possible

(This upgrade is only suitable for the Archimedes 300/400 series fitted with MEMC1A)

**PHONE FOR NEW LOWER PRICES**

CJE ARM 3 Upgrade	<del>£434.78 ex VAT</del>	<del>£500.00 inc VAT</del>
ARM 3 SUPER BOOSTER	£30.00 ex VAT	£34.50 inc VAT

(Please state clock speed *ie* 33, 34, 35, 36 .....Hz)

FOR FURTHER DETAILS PLEASE RING US.

**EVEN LOWER MEMORY PRICES**

**PHONE FOR LATEST PRICES**

Archimedes <b>310</b> 2nd MB	<del>£295.65 ex VAT</del>	<del>£340.00 inc VAT</del>
Archimedes <b>310</b> 4MB	<del>£452.17 ex VAT</del>	<del>£520.00 inc VAT</del>

Archimedes 310 Memory expansion prices include the fitting of the upgrade, courier collection and return of your computer

BBC <b>A3000</b> 2nd MB	£90.00 ex VAT	£103.85 inc VAT
-------------------------	---------------	-----------------

**BBC A3000 4MB EXPANSION**

The BBC A300 can now be expanded to 4MB without running the risk of damaging your power supply. This expansion board uses 8x4MBit chips which draw the same power as our 2 MB expansion.

BBC <b>A3000</b> 4MB	£247.83 ex VAT	£285.00 inc VAT

# PICTURE THIS

**JEFF TULLIN** extends his program from last year, to make storing this year's holiday snaps even easier

In the February 1990 issue of *BAU* was a feature headed 'Take Your Pic'. The program was a specially written database, designed to store and retrieve details of photographic images, a job which is next to impossible using conventional databases, as anyone who has attempted it would confirm. Since its publication, I have received several suggestions for improvements, corrections, and even full-blown heavily modified programs, from people who have found a use for it themselves. Most of the changes suggested, however, relied heavily on the additional features found in the Master machines. The original program was designed for use on as many Acorn machines as possible, and I wanted the same to be true of any new versions, so none of the changes outlined here require anything more than a basic model B.

I assume you have a working copy of the original *FotoFiler*, as all the changes listed refer to the original line number sequence, and disturb it as little as possible.

A couple of bugs surfaced after a time. The first is not really a bug at all. I have been told that line 660 should read:

```
660 PROCalter (-1)
```

otherwise the (D)etele function will not work. True, but its use is disabled here (in PROCaddrecord) as I did not think anyone would want to save a 'deleted' item to disc as a new entry. Still, you pays your money..

FNyes, as written, will not detect lower case letter 'y'.

Some people prefer a single key press option here. This is achieved by:

```
1990 REPEAT:X%=INSTR("NnYy",GET$)
:UNTIL X%=(X%>2)
```

PROCaddrecord can now use this new function, and can be amended to read:

```
670 PROCp(26,20,wipe$,0)
680 PROCp(26,20,"Save to disc?
(Y/N )",0)
690 IF FNyes PROCsave(-1)
700 :
```

A similar problem with lower case 'q' is resolved by:

```
1380 UNTIL I=81 OR I=113 OR EOF
```

Under certain circumstances, the program would add 50 superfluous spaces to the title of a photograph. A way of truncating title\$ was needed, and it is corrected by:

```
2250 title$=LEFT$(title$,23)
2255 IF LEN(title$)<23 title$=title$
+ LEFT$(wipe$,23-LEN(title$))
```

Memory restraints – a big problem in developing the program – were a nuisance for ADFS users who had page values higher than the standard &1900 in DFS, or the &E00 of the Master. The answer here is to use a commercial 'cruncher', or a shadow Ram system to allow the value of HIMEM (set to &3B00 in the program, and above which some machine code is assembled) to be set much higher, allowing that much more room for variables. Multiple statement lines would also have saved space.

## Improvements

The modifications I am about to describe are a little longer than a line or two, in the main, and as a result, I have listed them separately on the yellow pages. Each paragraph refers to its own short listing. Note that none of the listings is a complete procedure in its own right, merely additions or changes to existing program lines. Where a line number is duplicated, overwrite the old with the new. If the new line number doesn't exist in the original, add it.

### Listing 1

In PROCfindmatch, when the program displays the pictures it finds from the database, the titles can scroll off the top of the page too fast to

be read in full. This can be helped by setting 'page' mode, by issuing a VDU14 command just before display commences. I had one suggestion that the screen display be in double column output, and that is catered for here too.

### Listing 2

One or two people wanted to be able to change working drives from within the program. My original intention was to have the user boot up with the 'master' program disc, then remove it, insert the 'data' disc containing the database, and continue. However, for those of you with two drives, listing 2 prompts for the working drive when the filename of the data is requested. The command OSCLI("MOUNT "+AS) can be used instead of OSCLI("DRIVE "+AS) if you are using a Master or similar.

### Listing 3

If the photos you want to enter are all in correct numerical order, then having the program automatically increment the reference number would save some time in data entry. This is done using the changes in listing 3, which is a quite drastic revision, but worthwhile if you have a lot to do.

### Listing 4

The speed at which it is possible to browse through records leaves a little to be desired. These changes allow you to skip through 10 records at a time by pressing the up/down arrow keys in addition to the left/right of the original version. Naturally, you don't want to go past the end of the file and get an EOF error, so you can trap that using the max% variable introduced in line 1272.

Finally, I'll just make a couple of suggestions for areas where improvements could still be made. Firstly, the original was presented as a two-part program for reasons of memory shortage on the 32K model B. It is possible to combine both sections into one program for the Master. Some small improvement could be made in the time spent searching the datafile if the comparison was carried out in machine code. The date that each picture was taken was important to some people, and, although I just used that as part of the title myself, you might like to alter the program to include an extra field for the date, albeit with an increased field length. A search by title might be useful too. This was left out because the title is, in theory, optional, and such a search would be really slow.

And a fully mouse driven version for the Archimedes... now there's a thought!

# THE MAIN DIFFERENCE BETWEEN INTERDICTOR 2 AND A MODERN JET FIGHTER...

...ABOUT £20,000,000 (inc vat)

You'll also find a modern jet fighter a little too large for your tabletop and, unlike Interdictor 2, it requires around 25 groundstaff to get it airborne.

Best to stick with flight simulation, we think. And with that in mind, allow us to introduce Interdictor 2. It is written by the same people who brought you Interdictor but it's bigger, better, smoother and (believe it or not) faster.

It has a more realistic aircraft model, an easy to fly training mode, a new navigation system allowing route planning, way point setting and mission pre-planning. Added to this is LOCSAC a new local Situational Awareness Computer that allows you to monitor the local situation. You'll fly over 10,000 square kilometres of trees, mountains, roads, rivers, railways, lakes and much, much more.

The main scenario contains nine sub scenarios of varying difficulty. There are more types of air and ground vehicles with

more weapons. Enemy aircraft have more in-built intelligence and defence, and let's not forget one vital point; they're all out to get you. And there lies the real difference between a genuine jet fighter and Interdictor 2.

If you get shot down, with Interdictor 2, you simply start all over again. And, by the way, Interdictor 2 only costs **£34.95 (inc VAT)**.

## PERSONAL & BUSINESS ACCOUNTS

### The Account Book & The Invoice Program

These two programs have had excellent reviews over the years and enjoy a wide user base. They are very easy to use whether you are VAT registered or not and run on the BBC B, Master, Compact and Archimedes. Although they do not multi-task on an Archimedes we are currently working on a multi-tasking version. They are available at £34.95 each or £59.95 together. Please state computer and disc size when ordering or send/phone for our brochure.

### Personal Accounts for the BBC B, Master Series

10 Bank/Credit Accounts, 48 Income/Payment Headings, Full Scrolling entry/edit system with extensive reporting including bank reconciliation and statements. Only £18.95

### Personal Accounts SPECIAL EDITION VERSION 2 for the A3000 and ARCHIMEDES

RiscOS Multi-tasking version of the above with brilliant features including a 50 character description space per entry, 28 fully automatic standing order templates for any period on payments and income including forecast feature. Autosave option, Calculator, Note-Pad and much more. Fully scrolling entry, edit and search system makes this a joy to use which is why Archive Magazine described it as "very powerful, good value, easy to use and highly recommended". Only £28.95

# SOFTWARE AND BOOKS FOR THE BBC AND ARCHIMEDES

from Dabs Press, premier Acorn book publisher

## BBC SOFTWARE

### HYPERDRIVER

The ultimate printer driver ROM, with over 80 commands, a built-in NLQ character set, WYSIWYG previewing, access from View, Wordwise, Interword or BASIC. 100 page manual. For B/B+/E/M/C. Price £29.95 ROM, £24.95 disc for SRAM.

### MINIDRIVER

As HyperDriver but for Mini Office II. Includes Viewdata terminal. £24.95 ROM. SRAM version £19.95

### MOS PLUS

Utility ROM for Master 128s only fixing EDIT and CLOSE#0 bugs, ADFS format, verify and backup in ROM, backup/compacting in SRAM, alarm clock and configurable startup facility and much more. Price £12.95 ROM, £7.95 SRAM.

### SIDEWRITER

Pop-up notepad for SRAM users (any SRAM machine), works with any software. Price £7.95

### ASSEMBLER BUNDLE

Two Bruce Smith books on 6502 assembler with discs and Master Series update booklet. For B/B+/E/M/C. RRP over £30, yours for £4.95!

### FINGERPRINT

SRAM or main memory 6502 machine code monitor/disassembler/memory editor. For B/B+/E/M/C. Price £9.95

### CONVERSION KIT

Ready-made 6502 assembler routines for learning or development. Price £7.95

## BBC BOOKS

### VIEW DABHAND GUIDE

Bruce Smith's comprehensive guide to the View wordprocessor. "For those who want a complete, thorough and readable guide to View, then Bruce Smith is your man." (Beebug). £12.95 or £17.95 with disc.

### VIEWSHEET/STORE GUIDE

Graham Bell's 352-page *opus maximus* on these packages. "...invaluable reference tool" (Electron User June 1988) £12.95 or £17.95 with disc.

### MASTER OPERATING SYSTEM

David Atherton's (who?) definitive reference work including the famous 'differences between all eight-bit models' section used by countless programmers to ensure compatibility across the full eight-bit range. £12.95 or £17.95 with disc.

## MINI OFFICE II GUIDE

Detailed tutorial by Bruce Smith and Robin Burton for the BBC/Master versions of the software. Price £9.95 or £14.95 with disc.

### MASTERING INTERPRETERS AND COMPILERS

Fascinating Bruce Smith title on creating high-level languages. £14.95 with free disc and free copy of the ASSEMBLER BUNDLE.

## MASTER 512

### MASTER 512 DABHAND USER GUIDE

Full instructions for using the 512 and DOS Plus, with tips on software compatibility. £9.95 or £14.95 with disc.

### MASTER 512 TECHNICAL GUIDE

The long awaited companion guide with full 512 programming information and hardware expansion projects. Price £14.95 or £19.95 with disc.

### MASTER 512 SHAREWARE COLLECTIONS

Two collections of PC shareware, all tried and tested on the 512. Includes WPs, spreadsheets, databases, games etc. Five full 800k discs in each. Each collection normally £29.95, special offer £25 for both.

## ARCHIMEDES SOFTWARE

### ABC

Full-featured BASIC V compiler with extensions. Price £99.95. Free Demo disc on request. Add-on Utility pack ABX also available price £49.95.

### CAMBRIDGE PASCAL

Desktop-based Pascal compiler widely used in education. ISO/ANSI features plus many extensions. Price £69.95. Free Demo disc on request.

### INSTIGATOR

Utility system providing disc sector editor, memory editor, disassembler, command line archiving, and much more. Price £49.95

### ARC PC EMULATOR SHAREWARE

Similar to Master 512 Shareware but for the Arc PC Emulator. Two collections of five discs each. Price £34.95. Special offer both for £25.

### ARCDOS

Very popular program to provide full DFS facilities in desktop or !65Host/!65Tube. Price £29.95

## ARCHIMEDES BOOKS

### ARCHIMEDES FIRST STEPS

Introductory book for the Arc covering basic operations and use of !Edit, !Draw, etc. £9.95

### ARCHIMEDES ASSEMBLY LANGUAGE

The only tutorial and reference on ARM assembler on the market, with many RISC OS examples. £14.95 or £21.95 with disc.

### ARCHIMEDES OPERATING SYSTEM

Useful summary of OS information with detailed examples. £14.95 or £21.95 with disc.

### BASIC V GUIDE

BASIC V guide covering differences between earlier BBC BASICs and the superior version for the Archimedes. £9.95

### C: A DABHAND GUIDE

Massive 512-page complete guide to C programming. No previous experience required. Arc & BBC sections £14.95 or £21.95 with disc.

## ARC GAMES

### ALERION

Classic shoot-'em-up scroller. Multi-level, RISC OS compatible. Not protected. £14.95

### ARCENDIUM

Draughts, Backgammon, Reversi and Quadline, now RISC OS compatible £14.95

### ALIEN INVASION

Classic Space Invaders with editable invaders, waves etc. £14.95

### ALL-IN BOXING

Realistic boxing game with digitised sound etc. 1 or 2 player. £14.95.

## OTHER BOOKS

### Z88: A DABHAND GUIDE

Ideal introduction to the Z88, by the designers of the machines own software. £14.95

### Z88 PIPEDREAM GUIDE

Respected journalist John Allen's detailed work on all aspects of Z88 PipeDream. Good explanations of printing. Price £14.95

### PSION LZ OPL GUIDE

Ian Sinclair's guide to OPL programming on the LZ series of Organiser machines. £12.95

# BBC ACORN

## USER

# READER OFFERS

## HAVE A FREE GAME WHEN YOU SUBSCRIBE TO BAU

**ONLY  
£22.95**

At *BBC Acorn User* we value our subscribers. As well as making sure you receive your copy before it reaches the newsstands, we have negotiated with leading software houses to offer exciting free gifts to anyone taking out (or renewing) a subscription.

The basic subscription price is only £22.95 which includes 12 issues of *BAU* and a FREE game worth up to £24.95 (depending on format) with each new or renewed subscription. For Archimedes/A3000 users, the game is worth more than the cost of the issues – incredible value! There is also an exciting deal for BBC micro/Master users too, with a free game worth £15.95.

Two great free games are available – *Herewith the Clues* for A3000/Arc users and *Holed Out!* for Beeb users. So take out your subscription today while this special offer lasts.

**FREE GAMES** The following exciting games are available free with your 12-month subscription:

### Archimedes/A3000

#### *Herewith the Clues*

A Dennis Wheatley thriller full of mystery. If you enjoy detective stories, this is just for you!

RRP £24.95

### BBC Micro/Master

#### *Holed Out!*

A spectacular 3D golf simulation that will keep you up to par.

5.25in disc (RRP £15.95)

3.5in disc (RRP £14.95)

### The Small Print

Please note: Due to the popularity of our subscription offers we have had to adopt the following rules:

1. No more than one free gift will be allowed per subscriber per year (unless you renew your subscription early. In which case your free gift will be supplied within 28 days). This means that we will no longer allow people to cancel their subscriptions and then re-subscribe to get another free gift.
2. This offer replaces all previous subscription offers as stocks of free gifts from previous offers are no longer available.
3. Please remember that your free gift will be despatched separately from the first issue of the magazine to which you subscribed or renewed.

## Monthly disc offer

For readers who wish to receive the *BAU* monthly disc, which is packed with great programs listed in each month's issue, we also have a great offer. For as little as £5, you can receive a monthly disc with each issue – see order form.

# GAMES

## Sim City

In Sim City, you control the greatest cities of the world. In fact, you create them. Build houses, streets, industrial and commercial sites. Decide whether coal or nuclear power will be most profitable (and environment friendly!). You will need your wits about you for this unique game. Each decision you make will immediately affect your city and a wrong decision could result in crime (don't forget to build your police department) or pollution. You will face crises like tornadoes, earthquakes, etc. while trying to collect taxes and balancing the budget, but keep at it and you may become the first town planner to build the perfect city.

Special offer £13.95	Special offer £17.95	Special offer £11.95
Saving £1	Saving £1	Saving £1

## Hostages

You are the head of the Terrorist Combat Squad. An urgent call comes from the Minister for National Security. An embassy has been overrun by terrorists, and you've been put in charge of all operations. Your first priority is to place all your crack hitmen in strategic positions throughout the neighbourhood, without getting themselves shot. You then have to get your team of specialist paratroopers into the embassy and save the hostages without any loss of life. There are many potential death traps to trick you — these terrorists are no pushover! The pressure is on . . . and it's your move.

### A3000/Archimedes

RRP	£19.95	Special offer	£17.95
		Saving	£2

## Superior Golf

This is the complete golfing game for one to four players, plus there are full-feature hole and course construction facilities. This realistic golf simulation is for any level of player — novice to professional. You can also play on your choice of six of the most famous courses in the world. You will soon work out how to avoid the usual golfing hazards — water, bunkers, light and heavy rough, trees and the slope of the green.

When you've mastered the sport of golf, you can design and construct your own holes and courses with the easy-to-use, but very powerful, Hole Editor and Course Editor. Then you can enjoy playing a round on your very own masterpiece.

### A3000/Archimedes

RRP	£19.95	Special offer	£17.95	Saving	£2
-----	--------	---------------	--------	--------	----

## Play it again Sam 13

This four-game compilation from Superior has yet another collection of excellent games to get the year off to a cracking start. Barbarian 2 is a game of skill and strategy and your objective is to overcome the gruesome monsters. For classic fans, there's an exciting 'bat n' ball' clone — Hyperball. Of course, everyone loves Percy Penguin, a classic and highly addictive game. Percy must kill the Snobees by hurling ice cubes at them. And Pandemonium breaks out when you try to construct the core against all odds. Intrigued? This compilation is a must for your collection.

Special offer £10.95	Special offer £13.95	Special offer £8.95
Saving £1	Saving £1	Saving £1

## Play it again Sam 14

Another in this series of games anthologies, this is the very latest from Superior. You've seen the movie . . . now play the game! Play your part as Schwarzenegger the Predator, fighting through the South American jungle. But, beware the lurking alien. Ballistix is a different kind of ball game. And you don't have to play alone. Have the neighbours around for a league competition, and see whose yard the ball finally falls in. And speaking of balls, Superior Soccer is pitched in to this best yet PIAS. Star Port completes the ensemble. It's a brand new arcade adventure that will transport you into space to save the station's medical supplies. To become a hero though, you need to first look at page 108, and order your copy of Play it again Sam 14.

# DESIGN

**BAU** is pleased to offer its readers a great multi-tasking 3D graphics and animation system for the A3000/Archimedes

*Euclid 2* from Ace Computing is the only multi-tasking 3D graphics and animation system for the Archimedes/A3000. Completely re-written to follow Acorn's guidelines for Risc OS applications, *Euclid 2* is a fully interactive, multi-document, 3D, graphics and animation system.

Designed to be simple for the beginner to get to grips with, it has an intuitive icon-driven single-window interface. You can quickly throw new ideas together, rotate them in real time, zoom in and out, view them in perspective from any position and even show the effects of lights placed anywhere in the scene. !Draw files can be exported and imported.

**Special Offer Price – £50 (3.5in disc)**  
(RRP £70, a saving of £20)

## THE TOTAL DTP SOLUTION

For a limited period we are offering *The Publisher* PLUS four extra discs giving a total of 86 different fonts for only £49.95!

*The Publisher* is a remarkably easy to use and powerful desktop publishing package, featuring its own page description language, allowing you to operate it from within *Wordwise*, *Wordwise Plus*, *View*, *Interword* or *Wordpower*, and giving you total control over the layout of your documents.

It features a unique preview mode so that what you see is exactly what you get, including different sizes of font, reversed text, grey backgrounds, centring, left and right justification, eight box styles for highlighting text and creating borders, and much, much more.

Combined with the 86 fonts, *The Publisher* offers you everything you need to produce professional-looking results — all in one package, and for less than £50!

But remember, this is a limited offer, so to be sure of your *Publisher* kit order your copy soon.

# TAXAN PRESENTS A SCREEN LEGEND

## Multivision 795 with Trinitron® CRT

Taxan announce the latest addition to our range. A screen star which is destined to become a legend. The new Multivision 795.

This compact 14" auto-scanning colour monitor has already attracted rave reviews. Manufactured in Japan, Multivision 795 incorporates a 0.26mm Trinitron® cathode ray tube, providing a clear, flicker-free image from VGA right up to 1024 × 768 resolution. A versatile little performer indeed.

And if you think that has a touch of style, wait until you see the quality and colour of the picture.

Multivision 795 awaits your audition. Start the cameras rolling by returning the coupon or phone us on (0344) 484646.

Multivision 795 for the Acorn Archimedes now includes a free video cable and a VIDC Enhancer from Atomwide.

# TAXAN

A KAGA COMPANY

## 'The greatest picture ever'

To: Taxan (UK) Ltd, Taxan House, Cookham Road, Bracknell, Berks. RG12 1RB. Please send me more information about Multivision 795 and the complete range of Taxan products.

Public sector customers may purchase from HMISO at preferential prices. Please telephone (0603) 695339 for details.

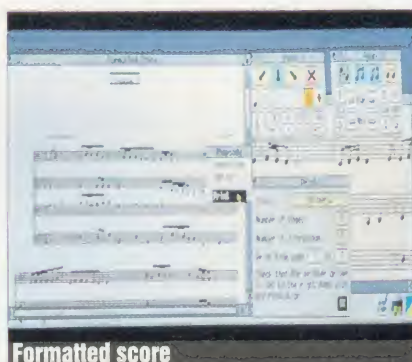

ALAN WADE knocks out a few chords on *Rhapsody*, the latest in Arc music power

# FINAL SCORE

I'm sure all Archimedes and A3000 owners have played with *Maestro*, the free music program which is on the Applications disc. They've probably all found *Maestro* is fun, but limited.

*Rhapsody* is similar to *Maestro* in many ways but it has more features and is much more powerful. For example, it allows you to print the music you create and it has more sophisticated Midi facilities, although it can still use the Arc's internal sounds. It's also nice to see a new music program for the Archimedes which *isn't* a sampler.

*Rhapsody* and *Maestro* both use traditional music notation, which will immediately put anyone who doesn't read music at a disadvantage. However, although a music score may look like it's been produced by a spider which has crawled out of an ink bottle and over the page, music notation is not as difficult to understand as you may think. There are several excellent books which can help. I can particularly

Formatted score

recommend *How To Read Music* by Helen Cooper in the *Basic Guide To...* series, published by Omnibus Press. Once you understand the basics you'll be able to enter your favourite tunes from sheet music.

A score in *Rhapsody* can have up to 24 staves (*Maestro* only allows four staves plus a percussion staff), each of which can support two independent parts. Five scores can be open at once. Normally, you will only want to work on one score at a time but this allows you to transfer data from one score to another.

To begin, open a score (initially, double click on *Rhapsody* on the icon bar) and up pops an empty score window containing the beginning of a single staff. Staves expand to fit the number of notes you place on them. Music symbols are placed on the staff at the cursor position. The cursor indicates not only a horizontal position (the time axis) on a staff but also a vertical position which, in the case of notes, indi-

cates pitch. The cursor can be moved with the mouse, but as there are only a few pixels between notes of adjacent pitch this can be tricky.

A click on the middle (menu) mouse button produces *Rhapsody*'s main menu and you need to select Display Panels from this before you can start work. Panel 1 contains notes and music symbols and panel 2 contains icons which move the cursor in line, bar, note, staff and octave increments. Line movement is by far the most useful as it is the most difficult to do accurately with the mouse.

Notes and symbols are selected from panel 1 and can be placed before, on or after the cursor. The choice of symbol is made using seven icons which hold notes, rests, accidentals, duration extenders (dots and ties, etc), bar lines, ornaments and articulation symbols, and pedal, text and voice change instructions.

Adding a staff

On the face of it this seems like a good idea: select the symbol type, click on the icon until the required symbol appears then click on one of the insert icons. In practice, it takes a lot of clicks. To delete an item it must be on cursor and the same symbol icon must be highlighted. *Maestro's* method of clicking and dragging notes around the staff is much quicker and easier.

Other icons in Panel 1 let you select the key and time signatures, dynamic markings, tempo and give you a choice of five clefs. You can create tempo and dynamic changes, too, which is excellent. There are many edit functions available including copy, clear, delete and transpose.

Music can be entered from a Midi keyboard although the program's response is very sluggish and it often doesn't pick up everything you play, especially if you play quickly. There are Slow and Very Slow play options which can help with Midi recording.

One problem which both *Maestro* and *Rhapsody* have is that they make no attempt to align the notes vertically across the staves (although recording via Midi does). This means that it's quite easy to place four eighth notes on one staff in the same space as a quarter note on another. Consequently the piece won't play correctly. Neither does either program insert bar lines automatically – surely this can't be too difficult to program, can it?

Before you begin, it's a good idea to set up the staves you need although you can add staves and alter their parameters as you go. Staves can be named and assigned an Arc voice, stereo position and number of channels. As only eight channels are available, if the piece contains many chords you'll have to work out the channel allocation carefully. This is less of a problem during playback via Midi (unless you only have an eight-voice expander!). Arc sounds

and Midi channels can be changed anywhere in the score although there is no facility for Midi program changes.

*Rhapsody* has several interesting and innovative features. A Trill Definition window lets you define six 'ornaments' which will be interpreted across Midi, too. This will be of special interest to anyone wanting to program classical music although the definitions cannot produce every type of ornament you may require.

Text, including lyrics, can be entered anywhere in the score. An Auto Spacing option allows text to spill over into the next time slot – although an option to step automatically from one note to the next and space would have been preferable.

One thing *Rhapsody* can do which *Maestro* can't is print out the score. The printer drivers on the Archimedes Applications disc are used. You can choose portrait or landscape layout and select one of seven

printout sizes. Printing ties up the computer and takes a considerable length of time, but the results are very good.

Files can be saved in Midi file format for loading into other programs which support the format (not much else does at the moment). *Rhapsody* can also load *Maestro* files offering a tempting upgrade to *Maestro* users. It's interesting to note that *Rhapsody* was developed using Silicon Vision's RiseBASIC compiler.

*Rhapsody* sets its sights on users with a wide spectrum of musical abilities, from the novice to the professional composer. While dabblers will probably take to it quite happily, the more experienced musician could well be deterred by the rather involved method of operation and lack of computerised assistance such as automatic vertical alignment across the staves.

*Rhapsody* offers many advantages over *Maestro* and should be considered as an upgrade, as well as a tempting purchase for anyone wishing to explore the music potential of the Archimedes without committing to MIDI equipment.

*Rhapsody* costs £49.95 and is available from Clares Micro Supplies, 98 Middlewich Road, Rudheath, Northwich, Cheshire, CW9 7DA. Tel: 0606 48511.

# · RHAPSODY IN BLUE ·

by  
adapted and performed by Julian (aged 7½ years)

Gershwin, Mozart, Vivaldi, all scribbling away, frantically composing their masterpieces, oh, to have had something a little more practical than pen and ink.

Imagine their delight had they seen Rhapsody. A new music notation package from Clares that allows you to write and modify musical scores in much the same way as a word processor allows you to manipulate text.

You can enter the music manually note by note. Or simply play the music in using a MIDI interface and a MIDI keyboard. Using a standard RISC OS printer Driver, pages, whole scores or individual parts can be printed out. What's more, Rhapsody also accepts Maestro files allowing Maestro scores to be played and printed.

As you would expect, Rhapsody enables you to enter dotted notes, triplets, staccato and accented notes, trills, repeats and much, much more. There is also the ability to add text, so you can easily add lyrics. And five

scores can be open at once allowing you to copy data between them.

All of this can be replayed via a MIDI or an Archimedes sound system, it's child's play, as successfully proved by Julian.

In short, it makes the labour of composing (noting, writing, correcting and changing) quick and easy, allowing you time to concentrate on the important part; the music.

Just think had Schubert had Rhapsody, perhaps his famous unfinished might have been finished. **PRICE - £49.95 (inc VAT).**

**CLARES**  
MICRO SUPPLIES

Rhapsody developed with Silicon Vision's RiscBASIC Compiler.

An equation building tool that complements many RISC OS applications, in particular DTP and word processor programs such as Impression and Impression Junior

Many users of the Archimedes have a need to include complex mathematical formulae or equations into documents. Equasor allows equations to be built up on screen, graphically, from their component parts. Using the Acorn outline font system it presents a totally accurate view of the final equation at all times.

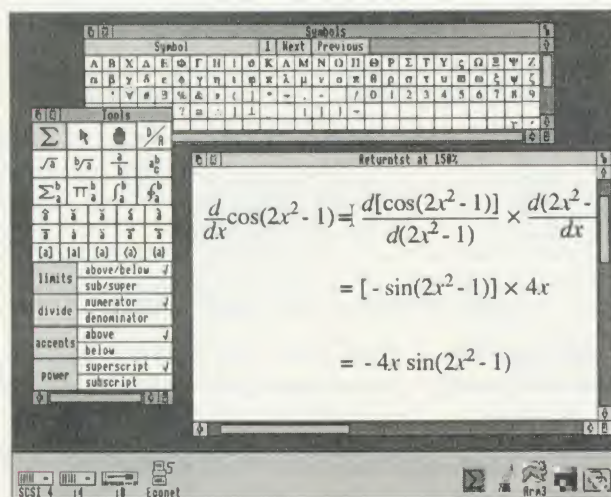

It simplifies the building of equations by presenting palettes of symbols, functions and operators which can be selected just by clicking with the mouse. It intelligently scales and re-sizes features such as summation symbols, brackets, and square roots as the equation is edited so they are always the right size.

Once the equation has been created it can be saved or exported as a Drawfile to any number of compatible RISC OS applications. In DTP packages it can be dropped into frames just like any other drawing where it can then be scaled and positioned as required.

When used in conjunction with Impression II, it can take advantage of the latter's embedded frame capability to embed equations into the text, even on the line. Once embedded in this way the equation will then flow with the text as part of the text.

#### Features:

Multi-tasking RISC OS application, can be run at the same time as other applications. Supports direct in-memory transfer of equations for the fastest, simplest integration with other RISC OS applications. Any number of equations can be handled at the same time. Equations can be viewed and edited at any scale. Saves equations as Drawfiles compatible with all applications that support this format. Supports multiple different RISC OS outline fonts and so is not limited to the Math/Greek font supplied.

- Supports region selection and cut, copy, paste between equations and documents.
- Styles for global control over fonts, size, spacing etc. of variables and operators. Effects give additional control over the appearance of individual parts of an equation.
- Small, compact program perfectly suitable for 1 Mbyte machines.

**Included in package a 60 page spiral bound manual with detailed tutorial reference, and index. Discs include the program, example equations, and Math/Greek outline font.**

**£49.00+VAT (£56.35 incl.)**

# Software — for the — Archimedes

## ShowPage

ShowPage is a PostScript compatible interpreter running under RISC OS.

Over the last 6 years PostScript has established itself as an industry standard graphics programming language. Pioneered by Adobe for use in the original Apple laser printers

it is now used in all manner of output devices such as colour printers, and typesetting machines.

ShowPage will be attractive to those wanting to learn and explore this programming language and those wanting to print and use PostScript files from other machines.

ShowPage is fully multi-tasking and RISC OS compatible. It can output any PostScript file either to a window on screen, or to the currently selected RISC OS printer. It can therefore be used to make even the lowest cost dot-matrix printer PostScript compatible. When used in conjunction with LaserDirect, it can turn this printer into a very fast and fully fledged PostScript compatible laser printer.

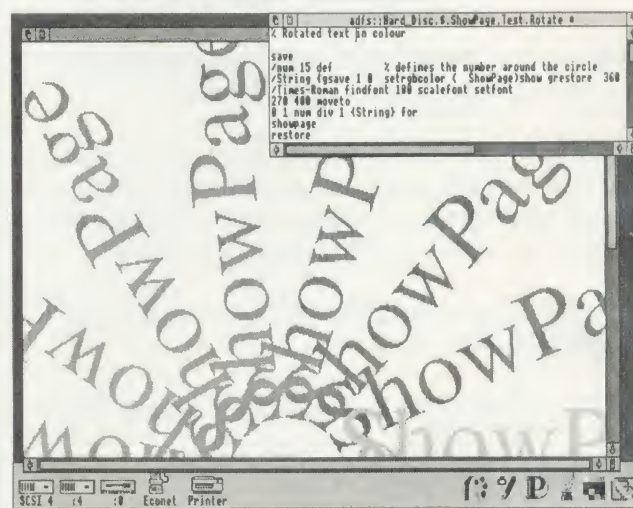

ShowPage supports the colour extensions and can create a sprite file of any required size. It can therefore be used to incorporate PostScript graphics into other RISC OS applications. It uses the RISC OS outline fonts, rather than the conventional PostScript fonts, for all rendering, so it is compatible with the wide range of Archimedes outline fonts now available for this computer.

ShowPage has a built in editor allowing PostScript programs to be created and executed directly, and interactively with the results shown on screen in another window.

Showpage is compatible with the output from Acorn PostScript printer drivers. Minimum recommended memory is 2Mbytes.

ShowPage can also be used with Laser-Direct to allow fast RISC OS printing over Econet.

*PostScript is a trademark of Adobe Systems Inc*

*Illustrates example ShowPage program and resultant output*

**Package includes a spiral bound manual detailing the ShowPage version of the language. 320 page PostScript language reference manual by Adobe. 240 page PostScript language tutorial manual by Adobe. Discs containing ShowPage and example programs. AvantG, BookM, Pembroke RISC OS outline fonts.**

**£149+VAT (£171.35 incl.)**

# HARDWARE AND SOFTWARE EXPANSION FOR THE ACORN ARCHIMEDES COMPUTER SYSTEM

## ARCHIMEDES EXPANSION CARDS

**IEEE488 INTERFACE** - A full implementation of the standard for automatic test and measurement systems.

**16 BIT PARALLEL I/O** - Two separate 16 bit input/output ports with handshake lines for a wide range of applications.

**DUAL RS423 SERIAL INTERFACE** - For communicating with two additional RS423 or RS232 devices e.g. printers, plotters, modems, instruments etc. Up to four cards can be fitted.

**12BIT ADC** - An 8 channel analogue to digital converter which can take up to 166000 samples per second.

**STE BUS INTERFACE** - Enables the large range of STE Bus I/O cards to be used with the computer. e.g. A to D and D to A Converters, Parallel I/O, Serial I/O, Bit Bus Interfaces, Stepper Motor Controllers, Peripheral Controllers, Video Controllers, Eeprom Programmers etc. - available soon.

**GINO-F 3D, GINOGRAPH AND GINOSURF** the FORTRAN graphics subroutine libraries

**TERMULATOR** - Converts the computer to a terminal which can communicate with other computers by emulating the VT range (VT52, VT102 and VT220) or a Tektronix 4010 graphics terminal. -

**HARD DISC UPGRADES** - Internal and external hard disc upgrades from 20 to 512 Mbytes.

**COMPLETE SYSTEMS** - Including laser or dot matrix printer configured to customers requirements

**IEEE488 INTERFACE FOR THE BBC MICROCOMPUTER** - Hardware compatible with the original Acorn IEEE488 interface. Can be used with Models B, B+ and Master 128  
**Officially appointed Acorn Scientific Dealer**

**Intelligent Interfaces Ltd**

## UNIVERSAL TELETEXT ADAPTOR

- \* RISC-OS version multitasks.
- \* Computer controlled tuning.
- \* Download and save pages.
- \* User programmable via SWIs & OS calls.
- \* Unique composite video & audio output.
- \* High performance T.V. front end.
- \* Fully mains powered unit in metal case.
- \* Upgrades available for existing users.

The ARC/A3000 version contains many powerful features making it very easy to use, i.e. point and click at page numbers. SAE for full details.

Prices include: -  
User port lead  
TTX V1.60 S/ware  
User notes.  
**BBC B**  
**£50.00**

Parallel port lead  
TTX V1.08 S/ware  
User notes.  
**A3000/ARC**  
**£60.00**

Module socket lead  
TTX V2.00 S/ware  
User notes  
**A3000/ARC**  
**£75.00**

## A3000 MEMORY UPGRADES

- \* Low power design, only 8 chips.
- \* 1 Meg upgradeable to 4 Meg.
- \* Easy to fit, just plugs in. +
- \* Screw fixed for reliability.
- \* PCB size only 175 x 50 mm.

**1 MEG £70.00**

(Gives 2 Meg total memory)

**4 MEG £200.00**

(Gives 4 Meg total memory)

NOTE. Memory prices fluctuate,  
please phone for our best quote.  
SAE for full details.

## UVIPROM 16/32 EPROM PROGRAMMER

- \* Plugs into user port on BBC B etc.
- \* Programs 2764 > 27256 inc. A & CMOS
- \* High quality ZIF socket.
- \* 21 or 12.5 Volt programming.

**UVI PROM 16/32 £30.00**

## UVIPAC EPROM ERASER

- \* Erases 3 EPROMs at a time
- \* 15 minute timer in (T) model.

**UVIPAC £21.50 UVIPAC (T) £26.50**

EPROMS	1-2	3-9	10 up

# GET THE PICTURE

Video digitisers can make graphics a lot simpler.

**CHRIS DRAGE** takes a look at the main contenders

**A** video digitiser is a combination of hardware and software which makes it possible to capture video images from a TV tuner, video camcorder or player and convert them into a form that a computer can use in other applications.

To be over simplistic, it converts the analogue signals from the source into a digital form. Once the images are in a digital form all manner of graphic manipulation can take place. Images can be captured in real-time by monitoring a PAL video source on the computer screen and 'grabbing' the required image with a click of the mouse.

So why do it? Anyone not blessed with artistic talent or who doesn't have a wealth of time to spare at the computer will find a digitiser a welcome source of 'ready-made' images to work with.

For example, video digitising provides schools possessing a camcorder or video camera with an inexhaustable supply of pictures ideal for inclusion in the school magazine or newspaper. Similarly, it provides a cost-effective means of illustrating project work, visually recording technology projects, class visits and field trips.

Travel or community brochures, personalised Christmas cards, illustrated wall displays; the list of applications in the school environment is endless.

Coupled with a laser printer and camcorder, the digitiser can even begin to pay for itself at school fetes as high quality prints of digitised portraits provide a popular alternative to instant photos!

## Shopping around

Although digitisers for the BBC B and Master 128 have been around for a while now, the results on eight-bit computers leave a great deal to be desired and most aficionados would probably agree that they were more impressed with the fact that it could be done at all, rather than the quality of the images. The fact is that for acceptable results, video digitising requires large amounts of Ram and the raw processing speed that Risc technology offers. The Archimedes is a logical choice.

**Unenhanced Snapshot image**

Watford Electronics was the first company to bring this fact to light. The speed at which the WE digitiser displayed monochrome images brought delighted gasps from those who first saw it go through its paces in 1988.

Time moves on and the past year has seen several colour digitisers appear, some of which have been reviewed in *BAU* already. Although there are hardware differences, it is the software by which the user will ultimately judge each digitiser and this is under constant review and improvement.

The Pineapple digitiser (reviewed in *BAU* April 90 issue) comprises a hardware podule (in a special external mounting box for the A3000) and a number of accompanying programs, the most useful of which is the 'Miniature Image Check/Control Icon' (!MICCI).

The program offers total image manipulation and analysis. Not being multi-tasking it fits comfortably into a 1Mb machine where it runs very fast. A multi-tasking version is under development but this will require at least 2Mb in order to run.

The current version is available in both 'basic' and 'extended' versions, the latter providing three additional facilities: anti-aliased fonts, image sequences, and the ability to edit the video Ram concurrently in four screens of increasing magnification. These features can be purchased as a £20 'upgrade'.

!MICCI allows images to be manipu-

lated in a variety of ways: zoomed in pictures can be smoothed to reduce pixel visibility, these can be flipped in both directions, 'ANDed' 'ORed' and 'EORed' and stored on a nominated 'shadow' screen(s). Similarly, pictures can undergo a Mode change, be defocused, or enhanced by an averaging routine which updates the image a number of times – and there's lots more.

The resulting image can be saved in a variety of different ways: as an area of podule memory, as a screen image of varying size, as a sprite file or in a format suitable for use with Wild Vision's *ChangeFSI* or the AIM software.

Snapshot is also a colour digitiser which occupies a full-width podule and works happily with both the A3000 and Archimedes series. The podule is in fact Wild Vision's V9 board (reviewed in *BAU* July 90). It differs from the Pineapple system by having no physical controls. It has Risc OS compliant, *Snapshot* image-capture software in Rom on the board ('SNAPSHOT') plus (!*Enhance*) image enhancing software on disc. The *Snapshot* software automatically places a new icon on the icon bar, and clicking the menu button produces a dialogue box relating to *Snapshot*'s default status. Clicking select produces a display window for the incoming video signal with an accompanying toolbox menu containing four icons related to the moving image in the window.

The image can be captured, saved or transferred immediately to another recognised application on the icon bar (such as *Paint*, *Draw* or !*Enhance*). An image may be sampled in either eight-bits (for speed) or 12-bits (for quality). A panel is also available with 'sliders' allowing the brightness, contrast and colour saturation of the raw image to be altered. All the really clever things are done in !*Enhance*.

With this module saved, or transferred, raw images can be manipulated in a variety of ways. They can be enhanced via error distribution on up to four pixels (the 'FSI principle').

Both the individual RGB components and the tone curve (altering contrast) can be adjusted and an infinite variety of special effects obtained via a 3x3 convolution

**Raw Pineapple image**

With **Fat Controller** you get the power to control one of the largest railway networks in the world. Controlling the railway traffic is not an easy task.

Change the points to prevent the trains from crashing and ensure the passengers reach their destinations. There are several levels of difficulty and increasing fun, progressing from simple to frantic. Remember you'll have the lives of the passengers in your hands - we don't recommend you to buy this game unless you feel up to handling this responsibility. Not recommended for those with a weak heart or of a nervous disposition!

## Siege

It is the year 1247. You must rescue lovely Princess Alexandra who has been kidnapped and locked up in the high tower of the black castle.

With the help of your brave men you try to save her so you can marry her, be the future King of England and live happily ever after (and have many children).

You can try to get into the castle many different ways, but whether you swim across the moat, cut down trees to make a bridge, scale the walls, dig a tunnel, smash your way in with heavy stones flung from a catapult, or just use the catapult to fling yourself in, many of your men will die before you succeed.

Several levels of exciting medieval fights, in a game that combines clever strategy with very fast action.

Swords, axes, arrows, hot oil and other medieval weapons will be used against you, so Shibumi Software can assume no responsibility for any injuries inflicted while playing this game.

## ArcPinball

A very realistic pinball simulation with animated TV pictures and original songs playing during the game.

Archimedes / A3000.....£24.95 each  
BBC / Master / Electron 5 1/4 disc....£11.95 ArcPinball only  
Master / Compact 3 1/2 disc.....£12.95

FAX no (0392)421762

filter. The sprite output can be scaled and can optionally be saved in monochrome and/or multisync mode. Some animation is possible via a separate movie module, but a full animation package is to follow.

If Snapshot has one significant advantage over its competitors, it must be in its intuitive approach to sophisticated image manipulation. It follows the Risc OS conventions, so offering consistency: almost no recourse to the manual is required until you get to the more subtle and clever image enhancements.

The Hawk V9 colour digitiser was reviewed fully in *BAU* July 1990 and there is little to add here, except to say that it shares the same hardware as Snapshot, yet the software (*Fastgrab*) does not compare well with Lingenuity's *Snapshot/Enhance* combination. Advanced image processing is possible with Wild Vision's *ChangeFSI*, an extremely versatile program, but at extra cost. A3000 owners will be pleased to hear that a podule expansion box will be available soon to house the V9.

Two popular monochrome digitisers are available from Watford Electronics and Technomatic (Brainsoft) respectively.

The Watford system comprises a single width podule, a disc and two manuals. The podule has 128K of frame store memory with software in Rom possessing all the facilities to grab images, display, rotate, scale to any size or angle, saved and printed out.

A sequence of grabbed frames can also be made into an animation and some degree of colour is possible with the addition of a Colour Converter podule (Lingenuity) which is valuable for those Watford digitiser owners who now want to capture colour images.

All the commands to grab and manipulate images are accessible as \* commands. The power and versatility of these commands is apparent in the stunning demonstration software on disc. *TV*, a Risc OS compliant application, provides easy access to all the image manipulation commands.

Clicking on a miniature TV icon opens the frame display area where any available video image is displayed.

A pop-up menu gives access to all the image manipulation options. The 'freeze' rate can be set and the contrast of both the picture and screen can be adjusted with sliders or automatically set to an optimum for a particular image.

A zooming window allows both the aspect ratio to be altered as well as movement of the zoom area over the picture. The really clever bits are in the 'tweaks' and 'process' submenus.

A superimpose option leads to some interesting image mixes. Pixel dithering, a 3x3 convolution filter, smoothing and flipping provide further control over the final image. Other sub-menus provide control of

the shape, size and type of image to be printed/saved.

For serious image processing a monochrome monitor is really necessary to display the available 64 grey levels in an Archimedes' 256 colour mode (which means fitting links LK13/14 in an A410/440). A Philips CM8533 colour monitor is a good compromise, however.

The digitiser works most efficiently in a 16-grey scale mode which will display images on any monitor.

For economy and those who find their podule slots largely occupied, the Multipod Professional Expansion Card (Brainsoft) offers a mono digitiser among its five functional interfaces. The desktop software incorporates contrast and brightness controls, zooming, dithering, grey scaling and sprite saving. However, the digitising time is slow at 1.6 seconds, which limits it to stationary or very slow moving objects.

The value of this digitiser lies in the fact that it shares its space with a sound sampler, RS232 port, analogue port and three BBC-style Rom sockets, and this may be important to some people.

## Conclusions

The Pineapple digitiser is a professional product and its *MICCI* software is an extremely powerful tool for editing and manipulating the images or for simply storing them as sprite files. It will be interesting to see the eventual desktop version.

Snapshot too, is a totally professional product whose Wimp software provides considerable control over the final image but does cost more than the Pineapple system. The Hawk V9 is a fine digitiser but you must pay extra for the sophisticated *ChangeFSI* image manipulation software. Readers who require digitising to professional standards should watch for Wild Vision's Hawk V10, which is currently under development.

For those whose pocket is limited, including schools with tight budgets, Watford's TV Digitiser offers high quality, low-cost monochrome digitising, which may be

**Mono image from Watford**

**Lingenuity colour image**

**Dithered Multipod image**

just what you require for outputting to a monochrome printer.

It has the further advantage of only taking up a single podule slot and costs a lot less than the colour models.

Similarly, if your needs are not too demanding, and you want to make the most of your podule space, then the Multipod card offers the most cost-effective digitiser around.

## SUPPLIERS

- The *Pineapple Colour Video Digitiser* is available from Pineapple Software, 39 Brownlee Gardens, Seven Kings, Ilford, Essex, IG3 9NL. Prices: Standard version £285.00 + VAT. Extended version £315.00 + VAT (upgrade cost £35.00). A3000 podule box £65.00 + VAT. PAL colour coder £69.00 + VAT.
- *Snapshot* is available from Lingenuity, Wood Farm, Linstead Magna, Halesworth, Suffolk IP19 0DU. Price: £339.00+VAT. (Price for schools £305.00).
- *Hawk V9* is available from Wild Vision, 6 Jesmond Road, Newcastle-upon-Tyne, NE2 4PQ. Price: £339.90+VAT. (*ChangeFSI* software: £22.00+VAT).
- The *Archimedes TV Digitiser* is available from Watford Electronics, Jessa House, 250 High Street, Watford, WD1 2AN. Price: £175.00+VAT.
- The *Colour Converter* (for the above digitiser) is available from Lingenuity, Wood farm, Linstead Magna, Halesworth, Suffolk, IP19 0DU. Price: £169.95+VAT.
- The *Multipod Professional* expansion card is available from Technomatic Ltd, Techno House, 468 Church Lane, London, NW9 8TQ. Price: £130.00+VAT.

**JAMES STAPLES**  
reviews  
Minerva's  
suite of  
programs for  
the office

# OFFICE SUITE

If you want to perform a variety of office tasks, without using several items of software, then *Desktop Office* from Minerva could solve your problems. The package offers five Archimedes office-related applications conforming to Risc OS desktop standards.

The five parts of *DTO* are wordprocessor, database, spreadsheet, graphs/charts and communications. Each application is deliberately limited to the most used functions – a spin off of this is reduced complexity which is a good thing for the inexperienced user.

Features common to each package are the extensive use of menus, the facilities to alter colours and options for restarting from the point where you last quit – even if the machine has been turned off. Any two

applications will load on a 1Mb machine but this can drop to one application if you want to print, because the Risc OS printer drivers are used.

## DTOWord

Like other wordprocessors, *DTOWord* allows you to type continuously while the program takes care of page layout.

Sections of text are handled in a way similar to Acorn's *!Edit* application. By using the mouse, a block is outlined and this can then be moved, saved to disc, deleted or even indented by a few spaces to attract attention. One word or whole

sections may be underlined, italicised or made bold and single words may be searched for, and optionally replaced, with others.

Facilities, such as inserting the date or defining a new margin, are implemented by embedded command. This is not 'what you see is what you get' – you can preview the document on screen before you print, but you cannot edit in preview mode.

Although idiosyncratic, embeds like [bp], [hm] or [pn] have been used by many wordprocessors in the past, but those new to wordprocessing might dislike them.

Only one document may be in use at any one time, although it is possible to cut and paste sections from different documents via disc. *DTOWord* does not check your spelling and cannot include pictures in the text. A thoughtful feature allows the size of, and space around, text to be increased.

## DTOBase

A database provides an easy way to store and retrieve information. Opening a *DTOBase* file brings two windows onto the

screen, one showing data, the other a set of tools. The data is presented as a card which has details of a specific subject – perhaps a book, a country or a person. The user specifies the size of the card and nature of data.

You can browse through the file card by card, or a single card may be found. The file may also be searched and a group of related cards formed. Minerva's *Flexifile* database (see *BAU* Jan 91) has 24 groups – *DTOBase* has one.

A report may be created which can consist of all the cards in the file, or a previously searched group. It may be printed or exported to disc, or another application. The file can be sorted and this affects both browsing and reports.

### DTOSheet

A spreadsheet is a grid of cells, each containing a number, a formula (calculation) or a label (text). Horizontal columns are usually alphabetical and the vertical rows are numbered, so each cell is identified by a reference, for example, A1 or C13.

The maximum size of a *DTOSheet* page is 55 columns by 99 rows. Entry and editing of cell contents is via a tools window, which alters cell formatting – justification (left, right or centred), the number of significant figures for decimal numbers or whether a value is to be preceded by a £ sterling sign.

Calculations are performed by referring to cell references. The following formula might be entered into cell D5: (A1- B7)/ C3. Instead of the formula being displayed, the result is shown in the cell. *DTOBase* automatically recognises formulae.

A block copy similar to *DTOWord*'s copy feature saves typing when defining a sheet. The block copy can also save selected parts of the sheet or export to other applications.

### DTOChart

This is my favourite application in the suite. It creates graphs or charts from the output of other applications. Once data is in *DTOChart*, it can be displayed in a variety of ways – as a bar, line, scatter or pie chart – in various colours. Scale can be set or left to the application to sort out.

Up to three sets of data can be overlaid per graph and one item in a set can be emphasised. In the case of a pie chart, this moves that segment out of the 'pie'. Line and scatter graphs have dotted lines connecting the emphasised item to both axes.

### DTOComms

Bulletin boards run over the telephone and users swap ideas, hold meetings, leave messages and play games. Many boards charge for their services.

To communicate over the phone, your Archimedes needs a modem. This device is controlled by software running from the

**3D histogram**

### Importing/exporting data

Term	Name	Size	Continent	Country	Area
Mount	Mont Blanc	4807.00 mts high	Europe	France/Italy	Alps, Savoie (France)

### Information found

### DTOBase tools window carries subject details

computer – in this case, *DTOComms*.

Different boards operate in different modes – *DTOComms* provides Ansi and TVI925 emulation modes – letting you access the Telecom Gold service, for instance. Modems require configuration, so *DTOComms* provides a menu to set these up correctly.

It also provides 19 commands for Hayes-compatible modems, allowing the user to write scripts which can configure the modem, dial a board, log on with password or account number and go straight to a frequently used service.

### Integration

Data is passed between applications either via disc or directly in two formats: text or CSV (comma separated values). A *DTOBase* report might be loaded into *DTOWord* as plain text, while numeric output from *DTOSheet* to *DTOChart* is CSV.

The finest example of integrated *DTO* applications is *DTOWord*'s [f] embedded

command. This inserts part of a *DTOBase* card into a document – for example 'Dear [f] name]' might be printed out as Dear Mr Smith, thus mail-merging is possible.

*DTOChart* relies on integration as it doesn't generate data itself. *DTOBase* can export all or just part of a card and *DTOSheet* follows a similar method for outputting sheets.

### Conclusion

You are not obliged to use all of the suite so if you have bought an Acorn Learning Curve package then *First Word Plus* might replace *DTOWord* as your wordprocessor. If *DTOBase* proves that you do have a requirement for serious database use you can upgrade to, say, Minerva's *Multistore*.

A few things trouble me. One is *DTOWord*'s embedded commands – a friendlier form of implementation would have been welcome. The manual contains some clangers, although Minerva does run a telephone help service.

If you need an all purpose office system, then *Desktop Office* is certainly value for money as the total cost is split between five applications. Each is easy to learn and use, providing reliable data interaction with other Risc OS applications and outside options.

If you want basic office tasks done in a productive manner, this could be just what you are looking for.

Desktop Office costs £130. Contact Minerva Software on (0392) 426160.

# Weather Data

**Weather Satellite Systems** Now available for the Acorn Archimedes A310 and A3000. This Meteosat systems comes complete including everything from the Antenna to the software. Animation is standard allowing the dynamic progress of weather fronts to be monitored and tracked. High resolution images of 800 pixels by 800 lines can be stored and manipulated in colour or grey scales on any standard colour monitor. Acorn Change FSI registered and compatible. Capable of receiving up to 400 images every day this remarkable system costs just £799.00

**Weather Satellite Resource Pack** This 190 page photocopyable resource is full of drawings, charts, photographs and activities. Written by James Hinderson, Humanities Advisor for the Field Studies Council, this resource is a must for any weather satellites user at only £34.95

**Weather Forecaster** An amazing software package that actually learns and adapts to your precise location. Simply tell it barometric pressure, temperature and estimated cloud cover, it will then give you an accurate 24 hour local forecast! Based on a self teaching expert system neural network, it will run on the Acorn Archimedes with the PC emulator. Weather Forecaster is available for £59.95

Other Timestep products include a fully featured **LANDSAT** Image Processor with 20 field study images and three full colour manuals. Acorn Change FSI registered and compatible at only £99.95

**PC Globe** and **PC USA** are full colour graphical databases of the world with an amazing amount of retrievable data. The special Timestep education price is only £59.95

Send for our full catalogue.

# GAME SHOW

A year ago I was wondering what the new decade would bring the Acorn games world. A proper slot for the Archimedes alongside the Amiga games scene perhaps? A demise of BBC games or possibly a new lease of life for the Beeb market? At the time, the two most prominent games producers, Superior and the Fourth Dimension, described the Beeb market as perfectly worthwhile, though Superior said it was hoping for a larger slice of the Archimedes scene. The Fourth Dimension already had that but now its BBC output has dipped, perhaps to the advantage of Arc gamers. In very broad terms, Superior looks after the BBC market and the Fourth Dimension caters for the Archimedes. A year into the new decade, what do the two companies say about this situation?

Superior is happy to admit its dedication to the beeb market. Steve Hanson told me

'if there is a decline, it's a very slow one. There are so many machines out there, many of which are changing hands. We still sell *Elite* to new owners of second hand machines, believe it or not, and the *Play it Again Sam* series is still very popular – in fact all the Sams seem to sell equally well. (could it be the name? – Ed). Of course we'll continue to produce new games and a few more mega-games are in the pipeline.'

The Fourth Dimension has no particular policy on whether games are written for the Archimedes or BBC, according to Steve Botterill. 'We're a fairly democratic company. We don't whip our programmers into writing particular games, it just so happens they mostly enjoy writing Arc software and that's the way it's turned out. But if someone writes a really good Beeb game...' If any readers have comments on the subject, please write in to the address below.

One of the mega-games in Superior's pipeline will be a flight simulator called *Superior Flight*. Steve Hanson explained

Keep an eye out for Crisis

that they were originally planning to put *Aviator* on the next *Play it Again Sam* package but then reconsidered. 'Aviator was very good, but does look a bit dated now. We saw how flight sims have developed since then and decided to write a brand new one for the Beeb taking the best features from *Aviator* and the others.' Peter Scott is working on the main routines now and hopes to have the whole game ready for playing in the summer.

At the Computer Shopper Show last month there were several interesting new things. *Chocks Away Mark II* was on display on the Fourth Dimension's stand, having been suddenly sprung on us in typical fashion by the Fourth Dimension's perfection department (Mark).

*Chocks II* exists as a free upgrade to original buyers and as standard issue in new sales. Improvements include a boosted frame rate (about 70 per cent faster) and, interestingly, clouds, though they look a little strange. To obtain a free upgrade send 4D your flying manual, name and address, and it will return the manual with an extra disk to convert your old software. This way your old pilot status is unaffected by the transfer.

A company called The Serial Port was demonstrating a new joystick interface for the Archimedes. It fits in the printer port and, like a dongle, allows the printer to remain connected.

If you already have a dongle belonging to *Impression DTP*, it is possible to purchase a long cable to take all the bulky hardware somewhere out of the way! The interface comes with a suite of software, including its own language and compiler. You can program movements of the joystick to represent certain key presses, then the compiler creates a module based on these. Different modules can be created for all your games, then included on the disc for that game.

In fact joystick modules for about thirty games are supplied with the joystick. The programming language and compiler enables the joystick (in fact 'joysticks' because two can be connected at the same time) to be used to control virtually any piece of software. Since the RTFM inter-

**Twin Worlds: familiar but nice**

face (reviewed last month) does not do this, the Serial Port's effort is the best buy of the two. The interface costs £23.99 and The Serial Port is on (0243) 531194.

The Arxe stand was sprouting new games, partly because Arxe is now selling games written by French company Eterna (who used to be called Systeme). The latest, called *Tactic*, is based rather loosely on *Tetris*, the idea being to arrange falling spheres into particular shapes. Also, the long awaited, and much mused over, Spectrum emulator for the Archimedes will shortly be available, making it possible to use any Speccy disc software on the Archimedes.

On the CIS stand, a new game was evident. Called *Crisis*, your brain is in one and is being eaten away. You control an eyeball and must shoot small animated icons of Bruce Forsyth and collect small brains in a maze of weird things.

Way back in the October issue you may remember that I

voiced a  
m o a n  
a b o u t  
A r c h i m e d e s  
g a m e s

Then in the December issue we printed the

opinions of one J A Briant who pointed out that games tend to use 'illegal' code so continuing work in Desktop might be dangerous. Besides, he said, programmers want to be sure there is no trace of the software to copy, so in balance a hard-reset is acceptable.

Well now we have a third opinion, from James Byrne of Cygnus Software in Leicester. He disagrees with J A Briant, saying that a well written program should be able to tidy up after itself whether or not it uses illegal code. He uses Cygnus' game *Twin World* (see review) to illustrate his point. James says the claim that tidying up is not possible because of illegal code is just an excuse for sloppy programming.

Well, is it? Should all games start from Desktop, behave themselves and then return to Desktop without fuss, or is this too much to ask? This debate is becoming quite interesting. I want more opinions. Send them in to Game Show at the address below.

A game called *The Crunch* is on the way from Eclipse, known for *Blowpipe* and *Worldscape*. It has a concept similar to a game sent in by a reader recently – and you'll be hearing about that soon – in which a small robot roams a 2D maze. The maze contains coloured tiles, invisible transporters and one-way areas. Once a colour has been chosen all the tiles of that colour must be consumed before eating another shade – and that's 'the crunch' because each level has been designed in such a way that only careful planning will render the last colour edible.

On the subject of mazes, a two-player split-screen labyrinth game ought to be rearing its head pretty soon if predictions are

correct. Speaking of rumours, we've heard that a driving simulator is on the way involving a two-player serial port link up.

I've been playing Superior's *Sim City* for the BBC. Hey, it's good! The idea is to build up and maintain a city – I called mine Samville. The 'Sims' (simulated citizens) live in the city, and the population varies according to factors such as taxes, mayors, taxes, crime and taxes – to quote from the instructions. The residents of Samville hate me because I give them coastal locations, parks and police protection (yeah, and I'm confused too). The industrialists love me because they get workers and large water supplies, and the commercial zones are thriving because I base them near stadiums which attract lots of customers. But the people just don't want to live in Samville.

I got so frustrated in the end that I increased the chances of a large monster stomping all over my city to 100 per cent. It wiped out the power station, crushed a few fire stations and then – then people started moving in and my popularity soured. There are some weird people living in the computer! *Sim City* will be reviewed soon, but if soon is too late for you, I've been playing it for a couple of weeks and it's great – no complaints so far.

*Powerband*, from the Fourth Dimension, should be finished by now. I had a quick race at the Shopper Show but the impatient visitor behind me was itching for a go so I didn't have time to form a very strong opinion. Basically though, your 3D racing car can be viewed from any angle, and driven in any of four modes. Fun mode seems to be similar to 'flying brick' mode in *Interdicator II* in which the plane becomes indestructible. In *Powerband* fun mode the ability to reverse is particularly useful after miraculously surviving a 260mph trip into a grandstand. Game mode provides track practice, while in timed mode pole position is the aim. The final mode – world cham-

**Joysticks for the Arc**

pionship – is the real nitty-gritty: Formula One racing, in which your car takes a beating and is quite prone to failure. The Fourth Dimension certainly thinks it's good enough to warrant a £24.95 price tag, unheard of since *Apocalypse*.

Some news in brief: *Wonderland*, the new adventure from Magnetic Scrolls, should now be available for the Arc from Virgin. *Superior Speech* is an Archimedes version of the highly acclaimed BBC *Speech!* from Superior Software, and ought to be on the shelves by now or very soon.

Any news, hints, tips or general comment, and particularly your opinions about the BBC/Archimedes markets and the Desktop games question, should be sent to: Game Show, BBC Acorn User, 20-26 Brunswick Place, London N1 6DJ.

Happy new year.

Kaptain Konflikt nooks da nooks

## Twin Worlds

Cygnus Software, tel: (0533) 559711  
Archimedes £19.95

Before anyone rushes out to buy this, hoping to solve the mystery of 'Who killed Laura Palmer?', let me tell you now. This has nothing to do with Twin Peaks!

*Twin Worlds* is in fact set in a far off world, inhabited by demons and wizards. You play the part of Ulopa, and must find the 23 parts of the magic amulet, once owned by your father. Your father incidentally, is now pushing up the daisies, courtesy of the evil druid, who also stole the amulet in the first place.

The overall game is in the now-familiar ladders 'n platforms style. Each level is divided between above and below ground, hence the 'Twin Worlds'. The top bit runs

parallel to the bottom bit allowing you to get around obstacles by descending, moving along a bit and then reemerging further on (or vice-versa).

A novel feature, is the presence of a merchant, who will sell you useful items in return for points you have scored. A flute is required to summon the merchant, a number of which are scattered throughout the land (flutes, not merchants!).

The druid's 'nasties' are scattered throughout the land and can only be stopped by pelting them with red, green or blue bubbles. Each type of bubble has its own particular use and different ones are required for destroying different monsters.

On the graphics front, the backgrounds and sprites are a direct port from the Atari ST – the gaps at the top and bottom of the screen are a dead give away. I know this is

## Kaptain Konflikt

Calderglan Computers,  
tel: (0282) 871717  
Archimedes £19.99

Hot on the heels of *Deeva*, (the only game in the history of the home computer to have incorporated a scrolling starfield which went the wrong way), comes a new title from the same company, somewhat reminiscent of *Commando* on the BBC. The version I have will be improved and added to before release, but the general idea is to progress through a series of vertically scrolling landscapes, blasting merry hell out of all who stand in your way.

On your destructive travels, you can collect various bits of equipment to help you: extra grenades and 'first aid' boxes which regenerate your energy level for example.

Currently there are six levels (which are viewed from above), including land, water and city scenes, but no doubt this will be increased. The graphics are rudimentary but adequate, however it may have escaped the artists' notice that every piece of vegetation looks like an enormous mutant lettuce! There are some good touches in the visual department, and each block of machinery or gun turret has two sets of graphics for both before and after it has been blown up.

The explosions themselves are pretty feeble, but some of the animation, such as the way the cannons emerge from underground, is nicely done. Scrolling is flicker-free, and a tiny flying machine can be hijacked to glide at double speed across the terrain with no loss of smoothness. You must avoid the cars and aircraft which glide by at intervals whilst dealing with the advancing hordes of enemy troops, and doors must be blown open to get at new supplies.

This is sometimes difficult, since the one-way scrolling can prevent you from throwing the grenade from far enough away. I couldn't help noticing that the bazooka-wielding character on the title screen bears a striking resemblance to Mel Gibson and I'm sure this game would be his cup of tea. Nevertheless, regardless of the price, I would say that this is only slightly better than budget-quality software.

Mat Tizard

the easy way out but a little enhancement goes a long way (just have a look at the difference between the ST and Arc versions of *Pipemania*.) All motion in the games is smooth and the main character Ulopa trots around in a rather cute, wibbly-wobbly sort of way.

The sound fares a little better, especially played through a hi-fi. Sound effects are rather thin on the ground (and below the ground) with only the odd blip when you launch a bubble.

It's excellent to see another large games software house supporting the Archimedes. Let's hope this is the first of many.

No prizes for originality, but a welcome addition to the Archimedes games library nonetheless.

Rob Miller

Enter the exciting and dangerous world of International Formula 1 World Championship Racing courtesy of your Archimedes and ace programmer Gordon Key. Powerband offers you the chance to drive at up to 260 mph accelerating from 0-60 in well under 4 seconds and 0-100 in less than 8.

This Formula 1 Pseudo-Simulator pits you against a large field of highly intelligent opponents who all have varying abilities but all really want to win. You are able to set engine power, gearbox types (manual, semi-manual or automatic), aerofoil settings etc. to try and give you the edge.

The unparalleled speed and quality of the animation and sound effects will have you totally absorbed. The engine for your car is digitised from a real 12 cylinder Formula 1 racing car. You can race on 16 real International Circuits (e.g. Silverstone, Hockenheim and Buenos Aires) which have all been meticulously recreated. Many even have additional scenery to improve the aesthetic appeal of what, in the majority of cases, are quite boring stretches of empty tarmac.

Your detailed car can be viewed from any angle and as such it is even possible to turn around and drive back down the circuit (in FUN mode). Plus oversteering at speed can cause you to skid and/or go into a very dramatic spin.

There are 4 playing modes for Powerband, you can select up to 99 laps in any race and all lap records are automatically saved to disc:

**FUN** mode allows you to choose from any of the 16 circuits and drive an indestructible car which will survive any kind of accident. The ability to reverse in this mode is particularly useful after you've miraculously survived a 260 mph head on crash with a grandstand!

**GAME** mode gives you the choice of any circuit but your car will explode in a severe crash or through accumulated damage.

**TIMED** mode can be manually selected with FUN or will be entered automatically before each race in order that your grid position can be determined. It's you against the clock and Pole Position is always your ultimate aim.

**WORLD CHAMPIONSHIP** mode enters you in The Formula 1 World Championship where you will have to compete in a series of 10 races (these are selected randomly for each Championship from the 16 circuits available) to gain the valuable points needed to become The World Champion. Your car will be subject to damage or failure as in the real thing. At the end of a race your progress in any World Championship can be saved to disc and continued later.

**BBC A3000 & ARCHIMEDES PRICE: £24.95**

... HOW TO ORDER... HOW TO ORDER... HOW TO ORDER...

### Dealers

Most of our games are available from most good dealers. If they don't stock them, then please give them a copy of this advert and tell them that they can easily buy them directly from us.

### Superfast mail order

#### Letter

Simply send us a quick letter telling us the versions of the game(s) you require, your name and address, and payment via cheque, postal order or Access Card or Visa details.

- We pay the postage and packing. (UK only). Overseas add £2 per item.
- All orders are despatched by 1st Class Post on the SAME day we receive your order!

#### Telephone

(0742) 700661 or 769950

Telephone orders welcome

### Data Sweet **Kudlian Soft**

Is a RISC OS Desktop suite of data handling  
applications especially written to facilitate  
delivery of the National Curriculum. The  
package includes a graph drawing program,  
three databases and a small spreadsheet.

Data Sweet is available from:

**Hampshire Microtechnology Centre,  
Connaught Lane, Portsmouth, PO6 4SJ**  
Tel: (0705) 378266

### RESPONSIVE SYSTEMS

Useful programs for learning, experiment, adaptation, personal or  
business use. All beautifully and concisely written in BBC Basic for the  
BBC B, using a common format, formal procedures, and a consistent  
approach, in a well structured presentation.  
Each program is divided into recognisable elements, which can be  
tested, examined, changed, borrowed for other programs, or listed,  
providing a valuable teaching aid which gives the user the opportunity  
to learn and discover.  
All the programs were developed originally for use in a small business.  
They are available on disk or listed on A4 paper.  
Telephone or send SAE for details to:

**Responsive Systems**

34a Glazbury Road, W14 9AS

071-602 4107

## MUSICAL

### SONGwriter

Print very legible songs (normal, conventionally - notated music  
and lyrics) with disc-based standard BBC 'B' and Epson-compatible  
dot-matrix printer.

Source data is coded account of composition in a compact  
QWERTY notation, devised for the purpose.

One to three staves; one or two parts per staff. Good repertoire of  
score features: lyrics optional.

Expert Systems - music layout is entirely  
automatic. Lyric syllables adjusted WYSIWYG prior  
to printing.

16K ROM and User Manual £49.50 incl p&p

Send for details: Algorithm Software,

## LISP

### EdScheme A modern Lisp for the PC, Atari ST and Archimedes

For years, programming languages such as Lisp have been the preserve of the research scientist. The Scheme dialect of Lisp is one of the most powerful products to emerge from the artificial intelligence community, yet unlike its predecessors it has proved accessible to student and hobbyist.

EdScheme is an incremental compiler for Scheme programs, providing the efficiency of a compiler with the convenience of an interpreter. In addition EdScheme has an integrated and dedicated Lisp editor and a comprehensive turtle graphics interface making it the perfect tool for exploring the science of computers.

Runs on all Archimedes systems. Only £37.50 inclusive of VAT and P & P

EdScheme is available only from LAMBDA PUBLICATIONS  
194 Cheney Manor Road, The Green, Swindon SN2 2NZ  
Generous discounts for educational users - s.a.e. for further details

## BASIC ON DISC

# CITY SLICKERS

CHRISTINA NEAL joins the Arc on the set of Capital City

If you've recently sat down for a quiet night in front of the television and found yourself ogling an Arc, you might be fearing for your health and sanity. You could be fooled into thinking that those endless hours spent writing your latest program have resulted in a mental picture of the Arc appearing before you each time you try and switch off. Rest assured though, your sanity is definitely not in jeopardy, as the Arc has been appearing on television in frequent bouts of late! That trendy yuppie bunch on the set of *Capital City* have been known to turn to their Arc for help while predicting which way the stock market will swing. And the not-so-trendy Max has been known to sit poised in front of an Arc monitor, glued to his flight simulator game!

The man to blame for your temporary fears is Ira Curtis-Coleman. The former design engineer was asked by the show's producers to find a network of computers for the programme's dealer room set. He didn't have to go far for the right machine.

Ira, who has organised video and computer equipment for the likes of *Aliens*,

*Superman 4* and Bond movies such as *View To A Kill* and *Never Say Never*, already had a certain type of machine in mind.

'I wanted to use a British manufacturer, and seeing as my brother Harvey was the director of Acorn at the time, I thought I would give him first bite of the cherry.'

Aside from these family connections, Ira wanted to use the Arc's speed. A 'test run' featuring the Arc, and other competitors such as the Commodore Amiga and an IBM emphasised the power of the machine.

'I put the same program into all of them and found the Arc ran about 17 times faster than the other machines,' says Ira.

This no doubt pleased Harvey Coleman, who eagerly provided his brother with a number of Arc 440s. Ira installed these on the set, and this consequently led to the Arc's prominent role in the programme!

Ira admits that installing the computers was a complex task, even though the whole dealer room set was essentially constructed in a mere matter of weeks.

'I wanted to create realistic images of a dealer room, but at the same time, I wanted the computers to be used,' he says. I had 19

computers and some video tapes for recording information to go on the screens.

The information concerning the stock market and shares was provided by Reuters, the worldwide news agency. Ira admits that he had to take great caution over what was used. For instance, it wasn't advisable to use a page of figures produced by Barclays Bank! Instead, Ira selects and displays information provided by foreign banks that aren't linked to British ones in any way. In addition, some of the information is provided by Prestel. Other news snippets are picked up on the Amiga and run under the BBC emulator.

'I wrote most of the software myself' says Ira. 'I used Microsoft so that I could add windows. I also included a language called Fast Basic to get the speed right.'

'Going into assembly language to write calculations was tough. There are other screens in the background which I've pre-programmed and put onto video tapes. All the machines are driven through one source so that they are all synchronised together.'

The network of Arcs are all controlled by one main machine which Ira operates in his control room during the filming process. This is done by creating a computerised electronic path field which allows any one monitor to connect to any source.

In other words, Ira can send out information to every screen in the dealer room. This is particularly useful for occasions when the actors are filming a closing down scene, as all the information can disappear from their screens instantly.

A recent episode of particular interest to Arc owners was the one featuring Chaos. The Chaos theory aims to prove how a number of continual errors can mount up to results that are totally unpredictable – especially where figures are concerned!

The episode featured a young lad named Danny showing Max and Hudson how Chaos theory works, and the different ways that the stock market can go.

One final but pertinent question that's no doubt crossed your mind is, do the actors actually get involved in operating the computers? Can Douglas Hodge, who plays smoothie Declan, use his Arc for real?

'He's been known to play around with it, yes,' smiles Ira. 'But the whole system is controlled by me because the actors have enough to do learning their lines. We've produced a computerised dealer board which is similar to a real dealers' phone system where they just hit a certain button to dial up a line. With this, they just hit the key and it will, for instance, create a list onscreen of all the world's banks.'

'The actors have a great deal of admiration for the system. They've got a lot on their plate, so they appreciate a system which is reliable and easy for them to work with when the cameras are rolling!'

BUSINESS EDUCATION  
OR HOME DATABASES

**MULTISTORE** The ultimate in database technology. A powerful database for the business or serious home user. MultiStore is a multi-tasking relational database which allows many database files to be opened at one time. Files may be linked so that relationships between files are automatically tracked. Rapid searches by any criteria, including 'sounds like' facility. Key fields for instant search, indices to allow file browsing in more than one order without sorting. Fast sort facility by single field or complex expression. Comprehensive reporting facilities allow any report, including totalled lists of fields, labels with multi-font capability, line trapping, justification, paging, multi-set stationery and even completely relational reports. Data can easily be exported to other RISC OS packages. MultiStore is a professional package and probably the most comprehensive database available today. **£299.00 INC V.A.T.**

**FLEXIFILE** The perfect database for education and small business users. FlexiFile is a new powerful multi-tasking database with friendly screen displays. Multiple files may be open at the same time with relational linking between any two files. FlexiFile allows fast sorts to be carried out and with its soundex searching allows even mis-spelt items to be found. Mathematics can be performed using the macros while indices allow you to browse the records in more than one order without performing sorts. FlexiFile lives up to its name giving the user full flexibility with ease of use. **£149.95 INC V.A.T.**

**SYSTEM DELTAPLUS** The database for the serious home user or enthusiast. System DeltaPlus is a comprehensive database giving you power coupled with ease of use. Easy to use video style controls and the ability to define your own card layouts make this database suitable for all types of data entry. Searches can be performed by simply selecting from within windows or by multiple criteria. Reports can be produced together with labels up to four across with blank line strip. With comprehensive maths, sorts and searches System DeltaPlus is hard to beat. System DeltaPlus may be programmed if required allowing you to customise the package or write your own applications. **£79.95 INC V.A.T.**

**GRAPHBOX** \* Data can be imported from the Minerva range of databases to GraphBox and stunning charts produced.

With twenty different charts and graphs you will always be able to present your data to its best. GraphBox also imports data from other RISC OS packages. With a 'Hot Link' to Pipedream 3 which allows for automatic updating of graphs from data produced and the ability to export charts as draw files. Graph Box is the answer you have been looking for.

\* Graphbox is not a database, but can be used with any of the above programs for reproduction of charts and graphs.

**£79.95 INC V.A.T.**

## SIM CITY

### The Unique Award-Winning City Simulation Game

With SIM CITY, take the destiny of the world's greatest cities in hand. Build houses, streets, factories, airports and power stations. You will have to fight crime and pollution, collect taxes and balance your budget.

Everything is managed and animated in real time. Every decision influences instantly the life of your town. You will face crises, natural disasters (tornadoes, earthquakes, etc.), but - who knows - maybe one day you will construct the perfect city. Pre-defined scenarios include SAN FRANCISCO and CHERNOBYL. SIM CITY is an absorbing and unique game. Other computer versions were voted the TOP GAME and TOP SIMULATION of the year in America (1989) and received a TILT D'OR award in France (1990).

BBC Micro/Master & Electron

## MASTER BREAK

### Snooker-Style Trivia Quiz Game for 1 to 4 Players

Six categories of questions: SCIENCE & NATURE, POP MUSIC, GEOGRAPHY, SPORTS & PASTIMES, ARTS and HISTORY. Over 1500 questions in the BBC Micro/Electron version. Over 2000 questions in the A3000/Archimedes version, including digitised picture and digitised sound questions.

In the 1 player game, try to get the highest break - you might even manage the maximum break of 147. In the 2 to 4 player game, compete against your friends and family for the highest score and highest break.

Start your frame with an easy red question, then choose your colour - have you the nerve to choose the black ball question? You've used all your PASSES and the ball is OVER THE POCKET - if you miss, it's a FOUL SHOT!

ALL THE FUN AND CHALLENGE OF A TRIVIA QUIZ AND SNOOKER MATCH ROLLED INTO ONE ENTHRALLING GAME.

Star Port

## PLAY IT AGAIN SAM 14

### A New Action-Packed Four-Game Compilation

#### PREDATOR

Nothing like it has ever been seen before! You've heard about the Schwarzenegger film PREDATOR...now you can play the leading role. Fight your way through the South American jungle, but, beware the mysterious alien...

"A fun game having a lot of the feel of a Schwarzenegger film"...Micro User

#### SUPERIOR SOCCER

A fast action arcade game, with realistic graphics, or a challenging football management game...or, for the ultimate in football excitement and realism, you can play a combination of both!

"Puts you in the role of football player/manager, combining on-the-field action with strategic planning just like the real thing!"...BBC Acorn User

#### BALLSTIX

It's a whole new ball game! The fastest, wackiest, toughest computer game yet to appear. Play against a friend or the computer...60 different screens.

"Ballstix is original, fun and very addictive. Each new level is a challenge which brings a new court layout with several surprises"

...Electron User

#### STAR PORT

A brand-new arcade-adventure with 60 action-packed screens, written by the author of QUEST and CAMELOT. Rescue the medical supplies from the strange triangular space station...but only if you can solve the increasingly difficult letter-puzzles on each level.

BBC Micro/Master & Electron
